POSTSCRIPT. Friday Evening.

Sugar.—The sales to-day passed off at steady prices, and a fair proportion of the quantity submitted sold, viz., 7,140 bags Mauritius, 1,305 bags Bengal, 1,800 bags Madras, and 470 bags Penang. The week's business in West India amounts to 5,649 hhds. Privately, 8,000 bags Manilla are reported at 37s 6d to 38s 6d, and 4,000 bags Chins, of which exact particulars do not transpire. 3,000 bags Bahia at 36s to 39s 6d per cwt.

Coffee.—197 casks plantation Ceylon sold at rather easier rates. 32 bales Alexandria Mocha partly realised 105s. 600 native Ceylon brought 64s 6d to 66s. 131 cases Neilgherry were bought in at 70s per cwt.

Rice.—2,483 bags of old import partly sold at previous quotations.

Spices.—172 cases brown nutmegs sold at easier rates, from 1s 3d to 2s 1d; fine, 1s 11d. 55 cases mace realised 1s 1d to 2s 1d. 111 bags pimento, 3d to 3½d. 507 bags Singapore white pepper, 5½d to 6d. 11 cases Penang cloves, 1s 1¾d to 1s 2d per lb. 20 barrels Jamaica ginger, 62s to 73s per cwt.

Cutch.—950 bags sold at 26s 6d to 27s per cwt.

Rubber.—Partly sold at 2s to 2s 9d per lb.

Metals.—Scotch pig iron, 51s 9d to 52s per ton.

Tallow steady. Town advanced to 56s 6d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been better supported this week at an advance of 6d. Nothing worth reporting in Dutch crushed.

Green Fruit.—Market continues good. Some parcels grapes and lemons, per steamer from Lisbon, sold by Keeling and Hunt at public sale, went at an advance of 3s to 5s per package. Barcelona nuts firm at 34s Messina, 38s. New black Spanish daily expected.

Dry Fruit.—Transactions in currants early in the week were very large, with full prices at last week's advance. No new of any weight has been offered at auction. A few old were offered, but found no buyers. The stock of old currants is found still to be nearly 6,000 tons. Valencias steady at 31s. Sultanas lower, 45s having been taken for a quantity. Figs sell freely: Turkey, 33s to 86s, according to package; Spanish, 26s to 27s.

English Wool.—Very little business. Prices firm.

Colonial Wool.—The next public sales will probably take place about the second week in November; we look forward to a continuance of present prices. Arrivals to date:—From Cape of Good Hope, 13,638 bales; from Sydney, 3,474; from Port Philip, 3,949; from Van Dieman's Land, 1,376; from South Australia, 818; from New Zealand, 3,796; from Swan River, 85; total, 27,136 bales.

Flax unaltered.

Hemp.—Market very firm at the prices quoted, but few sellers.

Cotton.—Sales of cotton wool from Friday, 28th September, to Thursday, 4th October, inclusive:—3,140 bales Surat, at 3¾d to 4d for middling fair to fully fair Compta; 4¼d to 4¾d for middling fair to good fair Dhollera; 5d for good fair new Broach; and 4¼d for good new sawginned: 1,600 bales Madras at 3¼d to 4¾d for ordinary to fully fair Tinnivelly; and 3¾d to 4d for fair to fully fair Western. The demand continues active, but owing to the limited quantity offering, the buying has been much restricted. Prices of Western Madras and the lower qualities of Surat have advanced ¼d to ½d per lb; other descriptions continue firm. 221 bales Madras, mostly sea-damaged, are advertised for public sale on Thursday, 11th instant. P.S.—Market very firm; sales to-day 300 Surat at 3¾d to 4¼d.

Silk.—There has been no alteration the last week in the silk market. A limited business doing at about the prices quoted.

Tobacco.—The market still continues inactive for home trade, arising from the indisposition to purchase at the recent advanced rates. For exportation, sales have been effected of upwards of 50 hhds of middling and ordinary Virginia.

METALS.—Business progresses without any material changes of currency. Copper quotations are maintained both in foreign and English, and although no new transactions of moment are reported, there is a fair amount of orders in the manufacturers' hands. Iron is still depressed, but at the ironmasters' quarterly meetings it has been determined not to alter prices. Scotch pig is looking up upon the expectation of business with France. Tin is rather easier to buy from foreign holders. Spelter is lower by 5s per ton, with a quiet market. Lead is flat. Tin plates have been done in largely at very low figures.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	56	6
Fat by ditto	2	10½
Yellow Russian	55	0
Melted stuff	43	0
Rough ditto	26	0
Greaves	20	0
Good drega	7	0

Imports this week 2,277 casks.

PROVISIONS.

Notwithstanding the limited trade in bacon, last week's prices are still maintained. A moderate arrival of foreign butter, at increased rates, and all cleared.

METROPOLITAN CATTLE MARKET.

MONDAY, Oct. 1.—The total imports of foreign stock into London last week amounted to 8,673 head. In the corresponding week in 1859 we received 8,563; in 1858, 6,911; in 1857, 6,329; in 1856, 6,354; in 1855, 7,764; and in 1854, 6,097 head.

The arrivals of home-fed beasts fresh up were less numerous than on this day se'nnight, and their general condition was by no means first-rate. The best Scots and Crosses were in moderate request, at last week's currency; but all other breeds were very dull, and, in most instances, 2d per 8 lbs lower. The show of sheep was moderately good. Generally speaking, the mutton trade was in a sluggish state, at prices about equal to Monday last. The best old Downs sold at from 5s to 5s 2d per 8 lbs. Although the supply of both English and foreign calves was limited, the veal trade was in a very inactive state, at last week's prices.

Supplies.	Oct. 4, 1858.	Oct. 3, 1859.	Oct. 1, 1860.
Beasts	5686	4870	5600
Sheep	23500	22080	25600
Calves	157	103	120
Pigs	350	610	440

THURSDAY, Oct. 4.—A moderate supply of beasts, chiefly in poor condition, was on offer in to-day's market. All breeds met a dull inquiry, at Monday's decline in value. Although the show of sheep was rather limited, the mutton trade ruled heavy, at barely late rates. The extreme figure for Downs was 5s 2d per 8 lbs. Calves, the show of which was tolerably good, moved off slowly, but without change in value. The top price was 5s per 8 lbs. There was an improved sale for pigs, and prices had an upward tendency. Milch cows, however, were a dull inquiry.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	6	2	10	Prime Southdown sheep	5	0	5	2
Second quality ditto	3	0	3	4	Large coarse calves	4	0	4	6
Prime large oxen	3	6	4	4	Prime small ditto	4	8	5	0
Prime Scots, &c.	4	6	4	8	Large hogs	4	0	4	6
Coarse and inferior sheep	3	4	3	8	Small porkers	4	8	5	4
Second quality ditto	3	10	4	4	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	6	4	10	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 1,020; sheep and lambs, 7,500; calves, 350; pigs, 320.
Foreign supply—Beasts, 510; sheep, 1,400; calves, 165.

NEWGATE AND LEADENHALL.

FRIDAY, Oct. 5.—The supplies of meat, generally, are good. Pork moves off freely, on rather higher terms; otherwise, the trade is heavy, at drooping currencies:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	4	2	8	Mutton, inferior	3	0	3	4
Middling ditto	2	10	3	4	— middling	3	6	3	10
Prime large	3	6	3	10	— prime	4	0	4	4
Prime small	4	0	4	2	Large pork	4	4	5	0
Veal	4	0	4	6	Small pork	5	2	5	8

POTATO MARKETS.

BOROUGH AND SPITALFIELDS, Monday, Oct. 1.—Our markets are tolerably well, but not to say heavily, supplied with potatoes, for which the demand rules steady, as follows:—York Regents, 100s to 130s; Kents and Essex ditto, 90s to 130s; Scotch ditto, 100s to 110s per ton.

WATERSIDE, Thursday, Oct. 4.—Moderate supplies of home produce have come to hand since our last report, and trade continues dull, at the subjoined prices:—York Regents, from 100s to 120s; Kent and Essex ditto, from 90s to 130s; Scotch ditto, from 100s to 120s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 5*l* 12s; clover, 3*l* 10s to 6*l* 0s; and straw, 1*l* 10s to 1*l* 16s per load. A slow trade.

CUMBERLAND.—Meadow hay, 2*l* 10s to 5*l* 15s; clover, 3*l* 10s to 6*l*; and straw, 1*l* 10s to 1*l* 18s per load. Trade rather dull.

WHITECHAPEL.—Meadow hay, 2*l* 12s to 5*l* 12s; clover, 3*l* 10s to 6*l* 0s; and straw, 1*l* 10s to 1*l* 16s per load. Supply moderate.

HOP MARKET.

BOROUGH, Friday, Oct. 5.—Ripe 1860 hops are selling freely as follows:—Weald of Kents from 15*l* to 20*l* per cwt; Sussex, 14*l* to 16*l*. Fine yearlings and old hops are in demand. New Mid and East Kents are a complete drug on the market. Duty, 30,000*l*, with but few in favour.

COAL MARKET.

FRIDAY, Oct. 5.—Wall's-end Hetton 19s 6d—Lambton 19s 6d—South Hetton 19s 6d Hartlepool 19s 3d—Kelloe 19s—Eden Main 18s—Harton 18s—Pensher 16s—Adelaide 19s—Woodhouse Close 16s 9d—South Hartlepool 18s 6d—Wall's-end Hedley 18s—Fothergill Aberdare 22s—Tanfield Moor Butes 13s 6d—Bebside Hartley 16s 6d—Davidson's Hartley 16s 6d—Hastings' Hartley 16s 6d—Howard's Hartley 16s 6d. Ships at market, 78.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 5.—Since the close of our public sales here on the 29th ult., there has not been much doing in this market buyers having supplied themselves for the present, either at the sales or by private contract purchases.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 5.—Fair attendance at grain market to-day. Moderate business in wheat at full prices of Tuesday. Flour steady at late rates. Indian corn in moderate demand at 36s 9d to 37s for mixed; 37s for Galatz. Oats and oatmeal, rather more doing at fully Tuesday's rates.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 6.—There has been a continuance of a fair demand for the best descriptions of manufactured iron at previous rates. In Scotch pig iron there has been little inclination to operate manifested during the week, and in the business transacted a decline in price has been submitted to. No alteration to notice in the market for copper. Lead remains dull. Spelter has slightly receded in price.

The Gazette.

TUESDAY, Oct. 2.

BANKRUPTS.

C. Tuck, Ely, butcher.
J. Knight, jun., Barge yard chambers, Bucklersbury, scrivener.
G. Drake, Stoke Newington, licensed brewer.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Oct. 1.—The railway market was inactive to-day, but with a good tendency. Several of the leading stocks closed at an advance, especially London and North-Western, Lancashire and Yorkshire, and York and North Midland. In the colonial market another decline took place in the ordinary stock and preference bonds of the Grand Trunk of Canada, the former leaving off, after official hours, at 26 to ½, and the second preference 60 to 65. Atlantic and St Lawrence shares likewise fell, while those of the Great Western of Canada improved. Foreign descriptions were generally dull. South Austrian and Lombardo-Venetian, however, closed slightly firmer at 1 dis. In American securities a fresh rise occurred in the bonds and shares of the New York and Erie. Illinois Central shares and optional rights were flat at 20 to 19½ dis., and 4¾ to 5½. Mines were steady at an occasional advance. Joint stock banks closed generally the same as on Saturday. London and South African, however, were heavy. In miscellaneous descriptions, the shares of the two discount companies were weaker. Victoria debentures, new, were last quoted 109½ to ¾; Canadian Five per Cents., 102¾.

TUESDAY, Oct. 2.—The railway market showed increased firmness to-day, especially towards the close. The principal demand was for Midland and Lancashire and Yorkshire stocks, at an advance of ⅝ to ¾ per cent., the traffic returns on these lines being particularly favourable. Most of the other leading descriptions improved ⅛ to ⅜ per cent. In the colonial market the large increase in the last traffic return caused a rise in Great Western of Canada shares to 14, buyers, whence a partial relapse took place to 13⅝ to ½. Grand Trunk securities and Atlantic and St Lawrence improved in sympathy. Cape shares were also firmer, at 1½ dis. Foreign descriptions were in better demand, especially South Austrian and Lombardo-Venetian, which left off at ⅞ to ¾ dis. In American securities the bonds and shares of the New York and Erie continued to advance. Illinois Central shares and optional rights again declined, the final quotations being 21 to 20 dis., and 4½ to 5. No change of importance occurred in mines. In joint stock banks, Chartered Mercantile of India improved. In miscellaneous securities the shares of the Great Ship Company were flat, at 6s 3d to 6s 9d. Victoria debentures, new, were last quoted 109⅝ to ⅝; Canadian Five per Cents., 102¾ to 103.

WEDNESDAY, Oct. 3.—The upward movement in British railway stocks continued, and a further general advance took place. The principal inquiry to-day was for Lancashire and Yorkshire, which closed 1½ per cent. higher, at 117½ to ¾. Midland, South-Eastern, and North-Eastern descriptions were next in demand, at an improvement of ½ to 1 per cent. Several other railways also advanced. The present rise appeared to have brought forward no supplies of any moment, and the market was thus firm from the scarcity of stock, together with the anticipated continuance of good traffic returns. In colonial securities, Grand Trunk and Great Western of Canada advanced. The second preference bonds of the former closed at 67 to 69. Indian guaranteed stocks were also firmer. Foreign railways improved, particularly South Austrian and Lombardo-Venetian. Pernambuco, however, were dull. In American securities there was another rise in the bonds and shares of the New York and Erie. A recovery also occurred in Illinois Central, the shares leaving off at 18 dis., and the optional rights 4¾ to 5. Mines were quiet, but steady. There was no change of importance in miscellaneous securities or joint stock banks. Great Ship shares remained heavy at 6s 6d, sellers. Victoria debentures, new, were last quoted 106¾ ex div.; Canadian Five per Cents., 102¾ to 103.

THURSDAY, Oct. 4.—The railway market improved in the morning, but towards the close partially relapsed with Consols. Prices, however, remained intrinsically firm, especially as regards the lines in the manufacturing districts. In the colonial market, Indian guaranteed stocks and Great Western and Buffalo and Lake Huron shares improved. Grand Trunk second preference bonds were also firmer. There was another rise in foreign descriptions, especially in South Austrian and Lombardo-Venetian, which closed at ¼ to ⅜ dis. The shares of the Illinois Central and New York and Erie and the bonds of the Michigan Central likewise advanced in the morning, but experienced a slight reaction before the close. The last quotation, after official hours, of Illinois Central shares, was 18 to 17 dis.; ditto, optional rights, 4¾ to 5½; and New York and Erie shares, 39 to 40. Mines were quiet, but generally firm.

FRIDAY, Oct. 5.—The railway share market to-day exhibited an unfavourable reaction, sales predominating. A reduction varying from ⅛ to ¾ per cent. took place in most of the principal stocks. Lombardo-Venetian Railway shares relapsed to 7-16 to 15-16 dis.; Grand Trunk of Canada and Dutch Rhenish Railway shares were weaker; Great Western of Canada showed an improved tendency. The Indian lines were well supported.

The Economist's Railway and Mining Share List.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

is the only STARCH used in
HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

TRADE MARK.

BROWN AND POLSON'S PATENT CORN FLOUR.

The LANCET states,
"This is superior to anything of the kind known."

RECIPE FOR SUMMER FRUIT PIE.

—Boil the flour with milk for four minutes, then pour it over the stewed fruit, and brown it in the oven or before the fire. This is very lightsome and much preferred to the ordinary pie crust.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Dublin, Manchester, and 23 Ironmonger lane, London.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"D. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"D. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

JULLIEN FUND.

Committee Room—50 New Bond street.
The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.
The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.
COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchel	Mr W. Duncan Davison
Mr W. R. Sams	Mr Julius Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.
Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street
BANKERS.
Messrs Coutts and Co., Strand
Haywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square
Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.
April, 25th, 1860.

DR BUCHAN'S PATENT

SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 72 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Prout, 229 Strand, &c., &c.
Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

A BOON TO NERVOUS

SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

Free for Six Stamps.

ENGLISH, FRENCH, AND AMERICAN MODE of TREATING DISEASE.

—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain

Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.
Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

MEDICAL ADVICE.

SECTION III.—Marriage in its Moral, Social, and Physical Relations—Happy and Unhappy Unions—Conjugal Anticipations and Disappointments—How to secure Healthy Offspring.
SECTION IV.—Youthful Abuse—The Secret Cause of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.
SECTION V.—Spermatorrhœa, or Chronic Impotence—Its History, Causes, and Moral Consequences—The Sterility of Age.
Dr LA'MERT is the only registered and legally qualified medical practitioner who has been engaged exclusively, for upwards of 20 years, in the treatment of these special disorders.

DR KAHN'S MUSEUM,

Opposite the Haymarket, OPEN DAILY from twelve to five, and from seven to ten. Popular Lectures at three and eight. Admission 1s. Dr Kahn's "Treatise on the Philosophy of Marriage," sent post free for 13 stamps from the author's address, 17 Harley street, Cavendish square.

CURE OF 29 YEARS' ASTHMATIC

COUGH BY DR LOCOCK'S PULMONIC WAFERS.—Middleton, near Manchester. "Sir, I am now 44 years of age, and I have been afflicted with an asthmatic cough since I was a boy 15 years of age; during that time I have resorted to every means in my power to remove it, but in vain, until last Sunday, when I sent for a small box of Dr Locock's Wafers. I have taken two boxes since, and from the effects they have had upon me, I feel no doubt of a speedy recovery.—G. STRINGER." Dr Locock's Wafers give instant relief and rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all medicine vendors.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE PILLS OR ANY

other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.
DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.
Certificate No. 36,418.—We find it the safest remedy Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurzer; Dr Shorland; Dr Campbell.
We extract a few out of 56,000 cures:—
Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulancy, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.
Similar testimonials from 56,000 patients who can be referred to.
The food is sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Rejuvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

HOLLOWAY'S OINTMENT AND

Pills.—Foresight.—Many slight symptoms forerun most diseases, and should never in any case be neglected. In diarrhœa, especially, the earliest symptoms must be checked, or the disorder will produce most unfavourable events. When swelling, tenderness, flying pains, and incipient irritations of the bowels display themselves, no treatment for safety and certainty equals rubbing in Holloway's Ointment. It should be thoroughly rubbed over the abdomen, at least twice a day, and flannel should then be worn next the skin to prolong the friction and maintain the temperature. The Ointment alone will arrest the diarrhœa, but its curative powers will be augmented if Holloway's Pills can be taken likewise. Holloway's are the only reliable remedies for every bowel complaint.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Richard Ford, 38 Poultry, London.

SHIRTS.—FORD'S EUREKAS.—The best quality, Six for Forty-two Shillings.
The Illustrated Price List, containing every particular and mode of self-measurement, post free.
Richard Ford 38 Poultry, London.

SAUCES.—CONNOISEURS have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufactors spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper. Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by perpetual injunction in Chancery of 9th July, 1858.' 6 Edwards street, Portman square, London.

CROSSE AND BLACKWELL, Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Curtains' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

FIRST-CLASS EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical (preparatory to Harrow and Eton) and commercial school, it is also highly recommended for a thorough French education, and as preferable to going abroad. Some of the parents who are continually visiting France, and whose sons have accurately been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. No corporal punishment. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum. Not one case of illness has occurred since the school has been established.—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming, but optional to parents.

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-plug can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details is to be obtained at either of the places named

THE FORTY-SEVEN SHILLING SUITS ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the labels can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

HUNT'S APERIENT FAMILY PILLS.

Prepared by qualified Medical Men, and have now been in use with the Public for more than 50 years.

The testimonies to their salutary qualities have been most numerous and decisive. They require no confinement from ordinary business, and, indeed, exercise promotes their good effects.

As a mild and effectual remedy in those various forms of disordered health that are sure to occur occasionally with every one, and indicated by Pains in the Head and Limbs, Influenza, Disordered Stomach, Fever, Bilious Attacks, Indigestion, Heartburn, and the like, this Medicine has proved, to persons of all ages and both sexes, most convenient and timely, and a truly valuable means of warding off those attacks of sickness and disease that are the cause to individuals and families of so much suffering and expense.

Prepared by Messrs Hunt, 47 Pulteney street, Bath, and may be obtained at medical establishments throughout the kingdom at 1s 1½d a box, or at 2s 9d, which contains three boxes.

MESSRS R. WOTHERSPOON and CO., 46 Dunlop street, Glasgow,

DEAR SIRS,—I have, as requested, to-day visited the Royal Laundry, with reference to the advertisement of the Nottingham firm, who state that their starch has been used for many years in the Royal Laundry, and have been assured by Mr Thompson, the superintendent, that none but yourselves have any right to state that they supply starch to Her Majesty's Laundry, as no other starch is there used, nor has been used for some years, but the Glenfield Patent Starch. I have been further assured that your starch continues to give complete satisfaction, and that though trial has been made of samples of various starches, none of these have been found nearly equal in quality to the Glenfield.—I am, dear Sirs, your obedient servant, WM. BLACK.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 18 stamps.—EDWARD PILLINER, 33 Great Queen street, London, W.C.

The Political Economist.

We feel that a fuller Memoir of the Right Hon. James Wilson than can be given within the limits of an article is due to the readers of the journal which he founded. We therefore intend to publish, as soon as possible, *a Supplement to the* ECONOMIST *containing a brief account of his career, and a short sketch of his character, derived from authentic sources. Due notice will be given of the precise date at which this Supplement will appear.*

INTERNATIONAL JUSTICE AND INTERNATIONAL LAW.

PIEDMONT, ROME, AND NAPLES.

The Pope and the King of Naples have both addressed Europe,—skilfully eloquent on the subject of their wrongs, sagaciously silent on the matter of their crimes. Last week we referred to the Allocution of His Holiness: this week we have before us the remonstrance and appeal of Francis II. It is a well-drawn and logical document. The inferentially obvious connection of the Sardinian Government with the daring proceedings of Garibaldi are carefully and craftily contrasted with Cavour's uniform disavowal of the freebooter, and his renewed assurances of amity and respect towards the Neapolitan Monarch. Victor Emanuel disclaims and condemns Garibaldi's enterprise; yet it is fitted out in and sails from Sardinian ports. He blames the conquest of Sicily; yet is avowedly anxious for its immediate annexation when conquered. He protests against the extension of Garibaldi's expedition to the mainland; yet, as soon as that expedition is successful, he willingly accepts the inevitable and foreseen issue. Garibaldi makes him a present of the Neapolitan fleet; and he accepts the gift. Garibaldi, wherever he goes, proclaims Victor Emanuel's authority and governs in his name; and Victor Emanuel never repudiates or discourages these proclamations. Finally, when the work is almost completed and the final victory almost won, the Sardinian troops enter the Neapolitan territory to give the *coup de grace*, and the mask is boldly thrown aside.

Now, no doubt, in all ordinary cases and according to all ordinary maxims, a Potentate who marches his troops into neighbouring States with which he is at peace, to assist revolutionary movements, especially where these are to redound to his profit and aggrandisement, commits a flagrant wrong and an open violation of the Public Law of Europe. But there are cases so peculiar, exigencies so great, as to make the breach of *international law* the greatest homage and service that can be rendered to the cause of *international justice*;—instances where, to use the fine language of Burke, "morality permits a suspension of her own rigid *rules* in "favour of her own higher *principles*." And we will now proceed to show why Sardinian intervention in Southern Italy presents as clear an exceptional case of this kind as ever occurred; and what are the special circumstances which take it out of the list of ordinary infractions of international law.

Non-intervention in all contests between sovereigns and subjects is, beyond question, the sound and righteous doctrine—a doctrine to which we are disposed to admit no exception. If a Sovereign, *of his own sole strength*, can oppress his subjects, let him: it is not our affair; we are not the police officers of the world; we may deplore, but we must not meddle. If a people cannot shake off the yoke of a domestic oppressor; if they cannot defend themselves and free themselves from his *unaided* violences, they can scarcely be very fit for liberty, or very able to maintain it were it presented to them. But this doctrine of non-intervention—true and righteous *in its simplicity and its entireness*—becomes false and iniquitous if its application be partial, transient, and one-sided. Now, in the case both of Rome and Naples it has been thus one-sided. It has been systematically set at nought till now: it is invoked only at the eleventh hour. It has been scouted, theoretically and practically, during long years of perfidy and oppression, by the very men who now appeal to its sacredness, and protest against its violation. Since the settlement of 1815, intervention in the affairs of Italy has been the rule, the habit, the incessant practice;—but it has been intervention in the interest of the Despot and the Priest alone. Has the struggle between the King of Naples and his subjects ever been fought out solely *between themselves?* Has the Pope ever governed and oppressed *in virtue of his own strength?* Never, for one hour. If either Potentate had been thrown on his own resources, where would either have been now? Let us give one single glance backwards over the real facts. Has not the Pope, in every revolution or projected one—in 1821, in 1831, in 1848—been kept on his seat by foreign aid? Did not he fly from his indignant people in 1848? Was not the Republican Government which succeeded him forcibly overthrown by an overwhelming foreign force? Was he not brought back and re-enthroned at the Vatican by French bayonets? Has he not been kept there ever since by them alone? Was not all the Northern portion of the Papal States so outraged by his rule, and was not he so utterly impotent to maintain or enforce it, that for years back, those Provinces were entirely administered, and administered in military fashion, by Austrian soldiers and Austrian officials? And the moment those intruders were withdrawn at the outbreak of the war with France, did not the whole population of the Legations become free *ipso facto*, without even a momentary effort on the Pope's part to retain them in subjection? What means an appeal to non-intervention, or a whining protest against liberal intervention, on the part of a Ruler who, nearly since the date of his elevation, has only held his Capital by means of French troops and his outlying Provinces by means of Austrian troops?

Look now at Naples and its wretched King. Who placed him there in 1815? The Congress of Vienna. Who kept him there in 1821? An Austrian Brigade. It is true, no doubt, that since that date no Austrian troops have marched into that Kingdom,—but it is true in words only.

The spirit of Austria has been there incessantly and avowedly. Austrian aid has been always ready, and *always promised;* and it has been the knowledge of this fact—we speak advisedly and with ample means of knowing—that alone, on more than one occasion, has kept the Neapolitan army firm in its allegiance. They, the officers and soldiers, knew perfectly well and were distinctly assured that if they joined the people or refused to act against them, Austrian regiments would march in and do it for them; and they did not choose to be superseded and punished, when the ultimate result, as far as liberty was concerned, would be the same. No! it was never the King of Naples who kept down his own troops: it was the King of Naples backed by Austria—sustained by an unlimited and loudly proclaimed credit on the whole military resources of Vienna. For generations, therefore, there has been habitual foreign intervention both at Rome and Naples in the interest of despotism:—this year is the first that has seen intervention on the side of freedom. It was righteous, because necessitated by long previous iniquities. It was just, because needed to counterbalance injustice. No man, with any sense of decent reason or equal morality, can raise his voice against it.

We have said that peoples should not be aided in their struggles for liberty against a single-handed Sovereign, because if they cannot conquer it, they probably do not adequately value it and would not permanently maintain it. There is, however—or at least may be—one case of exception, dictated by simple justice, against this seemingly harsh rule. It may well be—it often has been—that the defects which disable a people from conquering their freedom, and almost from deserving it—timidity, falsehood, servile terror, want of union, want of knowledge, want of arms—may have been wrought into them or forced upon them by *the foreign domination* which has long trampled them into the dust. It may be, that their Prince has been enabled to render them so cowardly, so slavish, so incapable of mutual trust and organisation, that without external aid they cannot liberate themselves, and without improvement cannot do honour to their liberation; and that he has been able thus to degrade them solely by foreign mercenaries whom his wealth enabled him to purchase, and by the complicity of a more powerful despot who befriended him. Do his people deserve no assistance then? Is not intervention *then* warranted and wanted to undo the evils that intervention has created? Can the doctrine of non-intervention be justly applied in all its rigid severity to a case like this? Surely not. *Yet this is precisely the case of the insurgent people of Sicily, Naples, and Romagna.*

There is another feature in this case which raises a clear distinction between it and all ordinary instances of foreign interference;—viz., that Victor Emanuel, in reference to other portions of Italy, can scarcely be regarded as strictly a *foreign* Prince. This consideration has, and ought to have, great weight, though it is difficult to define its exact limits, or to defend it with logical cogency. The Italians regard themselves as one people; they speak one language; they aim at one end; and they belong to one race, though with considerable intermixtures and variations. They desire to be united into one Kingdom under one Prince. The King of Piedmont is already King over the greater portion of the Peninsula. The Neapolitan and Roman States wish to form part of the already constituted Kingdom of Italy. The people of Naples feel that they are the *brethren* of the people of Tuscany and Piedmont; they call upon those brethren to aid them:—in making the claim and in responding to it, neither party feel that they are dealing with *strangers;* both feel that they have to do with *fellow-countrymen.* It is in vain to say that the feeling is unlawful, and is forbidden by political boundaries and ties:—the feeling *exists;* it is natural; it is irrepressible; it is spontaneous; and no logic can argue it away. We look back with satisfaction, with pride, with a perfectly easy conscience, to our revolution of 1688. Yet it is certain that the expedition of William III. to our shores was, in comparison with the present one of Victor Emanuel, weak, assailable, questionable—if not indefensible—in every one of its distinctive features.

But, putting aside these more subtle and perhaps *arguable* points, let us look at the matter from the broad grounds of humanity and justice. We know well what will be said to this class of reasons. We shall be told that if we once admit such 'sentimental' considerations into discussions of politics and international right, we remove all the established barriers of LAW, and render interference in every case an 'open question.' We answer that, while valuing most highly all established law, mainly because it is usually wise and just, but much also simply because it *is* established, we hold that such law *cannot be suffered to trample upon things more sacred than itself;* and that those who would suffer it to do so, and not we, are the parties who bring it into disrespect and make it impossible to uphold its rightful supremacy over the minds of men. We shall be told that to permit, or to proclaim the justice of, intervention in the present case, will establish a *precedent* pregnant with peril and confusion in the future. We answer that precedents only apply to cases strictly analogous and equally strong;—and that whenever such cases shall arise, it will be difficult to regret the establishment of the precedent in question or to quarrel with its application. For—all forensic pleadings apart—what *are* the facts of this case? Two Governments have been overthrown which, though situated in the centre of civilised Europe and in the heart of a famous and cultivated nation, are yet so bad that all the cultivation and civilisation of Europe with one voice cry out against them;—so bad that their own subjects have for years been in a chronic state of suffering and rebellion;—so bad that they could only be upheld by continuous foreign aid;—so bad, too, that the very despots who thus upheld them cried shame upon them, remonstrated with them, and repeatedly warned them that if they continued their stupidity and their atrocities, they could uphold them no longer, but must leave them to their fate. The prisons of these States have been crammed for years with political offenders, or rather with political *suspects*,—and proved by consentaneous, multitudinous, and reluctant testimony to be habitually kept in a condition of filth, damp, darkness, and malaria, which has raised a unanimous cry of horror from all the rest of Europe; gentlemen, guilty of no offence, have been *flogged* secretly in some—prisoners, guilty or innocent (we know not and it matters not), *crucified* in others! And, in Naples at least, there has been an excellent code of laws, appealed to triumphantly when Europe reproaches and exclaims, but set at nought and violated every hour, not by the people but by the Prince;—a Constitution solemnly sworn to, but perfidiously abolished in a sanguinary street massacre; and the Ministers appointed by the Monarch to carry out and act under that Constitution have been kept nine years in squalid dungeons for no crime but having done so. Such sins as these, so heinous, so persistent, and so unrepented, take Rome and Naples, we do not hesitate to affirm, out of the category of Governments whose peril can be assisted or whose fall can be deplored; and those who fear lest their fate should be drawn into a precedent against others, should point out any with which it is not a libel to compare them.

RAILWAY ENTERPRISE IN CANADA.

THE POSITION OF THE "GRAND TRUNK" RAILWAY IN THAT PROVINCE: AND THE NATURE OF THE REMEDIAL MEASURES REQUIRED.

(SECOND AND CONCLUDING ARTICLE.)

AT the outset of our further argument, let us resume in a short tabular form the results at which we arrived in our first article as regards the more immediate and urgent profit and loss aspects of the case.

We will employ approximate figures only, as being sufficient for our present purpose, and as possessing the important advantage of roundness and conciseness. It will be time enough by and by to descend into fractions. We will assume that the mileage in full swing of work is 1,000 miles, and that the working expenses are half the gross traffic—an assumption, however, which, although mainly true of large traffics, is not true of small ones, inasmuch as there is a minimum of charge below which a line cannot be kept open at all.

We shall have, then, the following abstract:—

Per mile per week.	Per annum gross.	Per annum net.	Capital.	Millions.	Rate.	Annual Interest.
£	£	£				£
17	884,000	 442,000	Bonds...	7	@ 6 per ct. ...	420,000
7	364,000	 182,000	Shares...	3	@ 6 per ct. ...	180,000
24	1,248,000	 624,000		10		600,000
8	416,000	 208,000	Gov. ad.	3	@ 6 per ct. ...	190,000
32	1,664,000	 832,000		13		790,000

Allowing for the high proportion of the working expenses upon the low traffics, we believe that these figures are substantially near the truth. The result is, therefore, that in order to pay interest upon the *Bond Capital*, there must be a gross traffic of 17*l per mile per week*:—7*l per mile per week more* to pay six per cent. also on the *Share Capital*:—and a further 8*l per mile per week* to extend the six per cent. to the Government advances. Altogether a gross traffic of *from* 25*l to* 32*l per mile per week* would convert this great undertaking into a solid, satisfactory, and popular security.

Now is there any reasonable prospect of the Grand Trunk traffic reaching either 24*l* or 32*l* per mile per week within any moderate space of time? Let us inquire,—and we shall not have inquired far before we become sensible of the existence of three classes of difficulties which hitherto have in a great measure kept down to the lowest point the traffic of a newly-opened line such as the Grand Trunk. These difficulties have been, *first*, the commercial distress in Canada and America, and the bad harvest of 1857;—the still worse harvest of 1858;—and the very unsatisfactory harvest of 1859:—*second*, the competition which the Grand Trunk has to sustain with the old and perfectly organised system of steamers on the Lakes and Rivers:—and *third*, the deficiency on the Grand Trunk of rolling stock and other appliances necessary for the prompt and ample accommodation of passengers and goods.

The disastrous effect of the three last years upon the traffic of the American and Canadian lines, especially upon those which draw their support from the agricultural regions of the continent, has been so marked as to be only credible on the evidence of positive facts.

We will give four illustrations:—(1) the Great Western Railway of Canada, a line of 290 miles, open for some years between Toronto and Detroit; (2) the ten American trunk lines centering at Chicago; (3) the New York and Erie line of 500 miles; and (4) lastly, the 1,200 miles of road belonging to the Railway Companies of Massachusetts.

(1) In the case of the Great Western of Canada the gross traffic and working expenses per mile per week for the four years 1856-9 were:—

Years.	Gross. £	Expenses. £	Years.	Gross. £	Expenses. £
1856	39	22	1858	28	17
1857	35	20	1859	26	16

Comparing 1859 with 1856, the fall in gross traffic is fully one-third.

(2) As regards the ten American trunk lines centering at Chicago, we can give only the total gross traffic of the same years 1856-9:—

Years.	Total Gross. £	Years.	Total Gross. £
1856	3,560,000	1858	2,641,000
1857	3,287,000	1859	2,540,000

The diminution of 1859 compared with 1856 in this case also—if we allow for extended mileage—is fully equal to one-third.

(3) The gross traffic per mile per week of the New York and Erie trunk line was in the same four years:—

Years.	Gross. £	Years.	Gross. £
1856	48	1858	39
1857	44	1859	34

The decline exhibited here is likewise not far short of one-third.

(4) The returns from the Massachusetts lines are given in the form of gross receipts per mile *run*, and in a form, therefore, which necessarily will not exhibit variations in so striking a manner as the returns in the three preceding cases. Still the following figures, remembering that they are furnished by the oldest, wealthiest, and least speculative State of the Union, are full of significance:—

Years.	Gross Receipts per mile run. dols	Years.	Gross Receipts per mile run. dols
1856	1.83	1858	1.57
1857	1.92	1859	1.64

In the face of evidence such as this, drawn from four different parts of the same region, and furnished by four different and rival schemes of management, it seems to be impossible to avoid the conclusion that to the disastrous character of the times since the autumn of 1857 we must trace a diminution of fully one-third in the gross traffic of the Canadian and Western Railways.

The Montreal Bridge on the Grand Trunk was not opened till the close of 1859. The line, therefore, was only locally and partially at work between 1854 and 1860. The results of these partial workings were:—

Years.	Gross per mile per week £	Years.	Gross per mile per week. £
1854-5-6	11	1859	10
1857	11¼	1860	13 (9 months)
1858	10½		

Now the addition of the one-third which the bad times have subtracted would at once raise the traffic to the 17*l* per mile per week which will fully provide for the six per cent. interest on the entire *Bond* capital; and when we remember the superabundant character of the American and Canadian harvest of this year 1860, the anticipations of a vast revival of trade must be admitted to be well founded.

Besides the effect of bad times, there has been the specially injurious operation upon the Grand Trunk of the organised steamer competition, and the deficiency of ample and attractive accommodation for passengers and goods. It does not require any profound skill to perceive that a competitor almost new to the trade will be some time before he finds himself a match for the hard-headed skippers who vex with their audacious craft the Rivers and Lakes of Canada. It is also easy to understand that a new line of railway seeking custom in the teeth of competitors for many years firmly established both on land and water, will have but a poor chance of success so long as its carriages and rolling stock, and the frequency and comfort of its trains, are not markedly better than the accommodation to be had elsewhere.

For some time past the Directors of the Grand Trunk Railway have candidly told the shareholders that in the absence of special funds—so far not raised—it would be impossible to equip the line in a manner absolutely necessary to give it a fair chance of traffic.

Assuming experience to be acquired in the management of the line, *and the best and fullest use to be made of that experience*; and assuming an efficient and ample supply of rolling stock, it seems to be a moderate computation that the additional traffic thence arising will be at least 7*l* per mile per week. But a 7*l* so acquired added to the 17*l* at which we have already arrived, raises the traffic to that level of 24*l per mile per week* which will suffice to pay six per cent. not only on the *Bond* but on the *Share* capital—and this conclusion is further confirmed by the strong probability that the traffic for the *whole* of even the present year 1860, and notwithstanding the difficulties to which we have referred, will average 15*l* per mile per week.

It certainly seems to us that a traffic of such volume, acquired under such circumstances, and so nearly equal to the satisfaction of all mortgage claims on the line, is, taken singly, a circumstance very well calculated to remove all nervous or extreme apprehension as regards the future value of the property.

But the results already achieved by the Grand Trunk are not the only evidence to be considered. What has been the general progress of Canada itself as a Province and as a field of enterprise? Do we find in the country and the community in and among which the Grand Trunk has grown up strong manifestations of rapid advancement? Is there from year to year a rapid increase in the trade to be carried on—the merchandise to be moved backwards and forwards—and the means of the population to be inoculated with a taste for railway facilities?

We will answer these questions by means of the following short table of *average annual* results, compiled from figures illustrative of the progress of Canada furnished by the Finance Minister (Mr Galt) himself in his pamphlet:—

Years.	Imports paying duty. £	Customs Revenue. £	Free Goods imported. £
1841—48	2,829,000	288,000	64,000
1849—54	4,904,000	656,000	333,000
1855—58	7,612,000	788,000	2,217,000

Imports and Customs revenue *trebled* in ten years, and free goods increased sevenfold in *five* years, are tolerably strong evidence of advancement both as regards magnitude and velocity; and every other description of evidence is consistent with the same results. The total population is now put down as exceeding 3 millions—in 1851 it was about 1¾ millions. In 1850 the town of London on the Western route had 5,000 inhabitants—in 1856 it had 15,000. Toronto in like manner had 30,000 inhabitants in 1852—and 42,000 in 1856.

But beyond the testimony of mere statistics, a more immediate and practical proof of the strong satisfaction felt by Canadians themselves in the progress of their Province is supplied by the nature of Mr Galt's own recent mission to this country. That mission had for its object the completion of a financial proposal, under which the holders of Canadian Six per Cent. Government Securities were invited in January last to consent to a conversion into securities at the reduced rate of *five* per cent. per annum,—and that proposal was of course grounded upon the admitted solid advancement which, in consequence of increasing population, trade, and revenue, has taken place in the strength and credit of Canada as a borrower in the English and American markets.

We arrive, then, at this short summary of the existing facts. A trunk railway of 1,100 miles, completed in seven years by an expenditure of 10 millions sterling of English capital, raised in the midst of great difficulties, upon the faith of an official assurance from Canada of a traffic of 25*l* per mile per week—an actual traffic of 13*l* per mile per week, even in the face of three successive bad harvests, deficient rolling stock, and inexperience in the competition to be sustained—and a progressive development of Canadian resources, mainly in consequence of railway facilities, so rapid that the Province is able to negotiate a reduction of one-sixth in the rate of interest borne by its public debt.

Looking calmly at the origin and progress of the Grand Trunk scheme; at the present state of the facts regarding it; and at the position which Canada seeks, with laudable ambition, to occupy in the estimation of this country and the world, there cannot be a question but that not merely is it the duty, but also the plainest policy of the Province to support the Grand Trunk line at least up to a point which stands out very clearly in the history of the transaction.

We say it is the duty of Canada to give further support, and we say so because it seems to us that the Province cannot evade or escape from the *official pledge of a traffic of 25l per mile per week* given in the most solemn manner in the original and subsequent prospectuses, and given not only by the highest official personages in Canada itself, but given also, as is well known, under special request and instructions from the Province by the two eminent London capitalists who in this country act as its financial agents and representatives.

We say, therefore, in the first place, that the faith and honour of Canada are pledged to the Grand Trunk at least until the traffic reaches 25*l* per mile per week over the main arteries of 1,000 miles. We say, also, that it is the plainest policy of Canada to fulful this obligation in no niggardly spirit. There can be no reduction of the interest on Canadian Debt so long as 10 millions of English money remain an unproductive investment in the greatest and noblest public work of the Province. Canada claims to be ranked in the highest class of colonial securities. Let her first take effectual care that a disappointed and exasperated body of shareholders in the main line of railway which intersects her territory have no interest or disposition to employ, not as well, but as *badly* as possible, the resources of their undertaking.

Statements are profusely made in certain quarters to the effect that the line is wastefully and unskilfully managed by the persons locally in charge of it. It is said that even at present more energy and judgment would derive a large revenue from Local traffic alone. How far these allegations are well founded, we believe that no parties in this country are at present in a position fairly to determine. But it is at least clear that, *as an indispensable preliminary* to any further application to the Province, there must be by the English Directors and Shareholders an offer of the fullest inquiry by competent persons into the present working arrangements of the line. The Bondholders, the Shareholders, and the Province are each and all entitled to be convinced on the best evidence that no exertion is spared to make the property productive. Our own notion would be a Commission of three competent men, one to be nominated by the Shareholders, one by the Province, and the third to be agreed upon as a Chairman or Umpire.

In the third place, we advise the English Bond and Shareholders not to sacrifice their property under any present panic. With united action, and by firm and moderate measures, the concern will right itself. Still less should the English Share and Bondholders permit any misunderstanding to arise between themselves and the London Board. The London Directors have stood by the concern manfully from first to last. It is quite well known that they have made great efforts and great sacrifices—and it is also quite certain that if relief is not to be found under the leadership of such names and such influence, it is not likely to be found at all.

As the sum of the whole matter, we arrive then at the four following conclusions, viz.:—

1. That hitherto the traffic has failed to the extent of one-third in consequence of financial pressure and bad harvests in Canada—disasters both of them now removed.

2. That the traffic has been, and is, largely kept down by the deficiency of rolling stock and plant.

3. That the Province of Canada is bound by positive obligation and by plainest policy to stand by the Grand Trunk at least until the average yearly traffic reaches 25*l* per mile per week.

4. That the remedial measures to be at once adopted are shortly these:—Combined and cordial action between the English Directors, Bond and Shareholders in proposing to the authorities of the Province a speedy and searching inquiry into the working arrangements of the line,—and founded upon the results of that inquiry, the adoption of vigorous measures for obtaining from Canada fulfilment of the pledge under which 10 millions of English money have been spent in seven years for the advancement and benefit of the inhabitants of that dependency.

THE RAGGED SCHOOL DIFFICULTY.

Mr M. D. Hill has more practical right than almost any other Englishman to speak with authority on the subject of the prevention and reformation of crime. To him and to Captain Crofton are mainly due the vast improvement which has taken place in late years in the treatment of crime,—and while Captain Crofton has devoted his main efforts to the treatment of crime in its most hopeless forms in Ireland, Mr Hill has done the most to improve the method adopted in this country with juvenile offenders. We listen, therefore, with sincere respect to every word he utters on this subject; and his charge to the grand jury at Birmingham on Monday has so practical and pointed a conclusion, that it demands the careful attention both of the public and the Government. Mr Hill complains that of the three species of schools which affect the class of actual or possible juvenile offenders,—the Reformatory Schools which deal with actual delinquents,—the Certified Industrial Schools which deal with vagrants and *incipient* delinquents, those who are just passing over the boundaries of crime,—the Ragged Schools which deal with the class (as yet outside the boundary of crime) which chiefly *furnishes* the delinquents,—of these three, the last, which, if not the most important, is at least the nearest to the ordinary educational establishments of the country, is the most neglected by Government. He says "if public money "is to be spent on education at all, the schools which I have "now described [the Ragged Schools] *ought to be the first* "*objects of the public bounty*"; and concludes his speech in the following earnest words:—"Whether it should come from "the Privy Council or from the Home Office—whether it "should be charged upon the general revenue of the country "or raised by local rates,—these are questions into which I "will not enter. But I stand upon the broad and irrefragable truth that, as the disbursement is called for by the "interest of the State, by the State it ought to be borne, and "I must unite my humble protest to the masterly speech of "Sir John Pakington in Parliament, the fervid appeals of "Dr Guthrie, and the unanswerable remonstrance of Mary "Carpenter against the huckstering frugality with which our "Ministers let go their coin, shilling by shilling, to the "Ragged Schools—a parsimony which, when contrasted with "the plenitude of their munificence in favour of classes of "the community able and willing to contribute to the education of their children, strikes me as the most astounding "example of inconsistency which has occurred in my time."

Now, we hold with Mr M. D. Hill that the parsimony which would stint expenditure on the education of the class most in need of education, and which is most unable to educate itself, would be exceedingly unwise. But, unfortunately, Mr Hill does not do justice to the true difficulty of the case.

At present the clear principle of our educational system is to give *Government aid* to the voluntary efforts of the class educated. We do not profess to encourage, nay, we are exceedingly anxious to avoid a system of purely gratuitous education of the poorer classes at the public expense. We think it all-important to proportion public aid to the amount of individual effort. We believe that the education given is infinitely more valuable when the parents of the children educated pay something appreciable themselves for the benefit gained. Accordingly it has been a sacred principle of the Parliamentary system as hitherto adopted, to do nothing for those who will make no effort for themselves.

On the other hand, wherever the class to be educated is in any way brought within the reach of the law,—as in the case of Certified Industrial and Reformatory Schools,—there is no danger at all of this rule being infringed. It is, in a certain sense, a disgrace to belong to this class. It is not likely that any respectable parents will ever avail themselves of such machinery to get gratuitous aid for their children. There is a stigma in the committal of a magistrate, and in the power of compulsory detention, which effectually excludes Reformatory and Certified Industrial Schools from the resources available for educational purposes to the honest poor.

It is essential, then, to condition (1) that all schools for the poorer classes in general should derive some of their resources from the parents;—(2) that gratuitous schools *not* intended for the general use of the poorer classes, should be marked by some disagreeable conditions which will effectually prevent them from gradually superseding to any appreciable extent the schools where payment is required. And Mr Hill should have made it clear that it is the difficulty of complying effectually with this last condition which renders the Government so chary in their grants to Ragged Schools. It is not from any mere *doctrinaire* principle—it is from a wholesome jealousy of a formidable practical danger, which, however easily it might be avoided by really conscientious managers, could not fail to encroach eventually on the present principle of educational aid, that the Government have held back in the case of Ragged Schools. They do not doubt the existence of the class in question; they are very anxious to help them; but they fear that in helping them they may do more harm to the class above, than they do good to the class below. It is just the Poor Law difficulty over again. No one doubted the harshness of the New Poor Law: but it was seen that the old system, as a system, degraded many who might have helped themselves, and that this was a far more terrible evil than even that of failing to aid many who could not have helped themselves.

For our own part, we are strongly inclined to think that the class of children in question, so far as their education is aided by public money at all, should be aided by parish money. If they do not attend the Union Workhouse School—which they might be allowed to do, at the discretion of the Board of Guardians, as the least objectionable form of out-door relief to their parents—they might be assisted by parish money at another school. By a recent Act, Boards of Guardians are enabled to pay for the education of pauper children receiving out-door relief; and the payment might be often granted for a time as the *sole* out-door relief, where it appeared reasonable to the Poor Law Board. No doubt such parish aid would be very inadequate to the views of Mr Hill and his supporters. We heartily sympathise with their wishes, and yet we do not see how they could be carried out without threatening the sound and wholesome principle on which our educational grants are now based.

THE LIBERAL CREED AS TO GOVERNMENT BY THE SWORD.

THERE can be no question of vaster importance to any conscientious English politician than that which is directly raised by the letter of an able correspondent which we print below. Can any one country claim really to *own* another as a landed proprietor owns an estate? Is there any limit, and if so, what, to the *right* of an Imperial Government to enforce the submission of subordinate races? Can any true Liberal maintain that government by the sword is always legitimate if there be no other hope of reducing a province to obedience? Is the highest political welfare of the race governed a consideration never to be weighed for a moment against the safety and splendour of the imperial power which governs them? or, if it may be taken into account, under what conditions, if any, might it absolutely outweigh all considerations of advantage to the governing power? These are some of the questions which cannot but suggest themselves to any one who reads our correspondent's letter,—and there are few true Liberals, we trust, who will be willing to acquiesce so easily in the very clearly defined but despotic theory which he advocates. Our correspondent's answer to all these questions is simple, and he does not shrink from illustrating it by what we should have called a crucial instance. He says that there are *no* limits to the right of the imperial sword, except the obvious advantage of the Imperial Government. If it is important for the safety, power, and prestige of the English Government to keep any English colony or India in subjection to us, then it will be *always* right to do so while we have the requisite military force at our disposal. If it is important for the power and prestige of the Austrian Government to keep Venetia in subjection, then no consideration that merely affects the internal political welfare of Venetia has any right even to a hearing in the face of this imperial necessity.

This is a sufficiently intelligible position,—possibly somewhat startling to those Liberals who have all their lives been insisting on the infinite superiority of even a poor and feeble *self*-government to the wisest and most enlightened despotism that ever existed. Liberals have usually been accustomed to speak of all self-government,—and that independence of position which is the first requisite of self-government, as something sacred,—as a privilege which it is disgraceful to take away from any people unless it be hopelessly abused, and degraded into a plea for anarchy, licence, and corruption;—in short, as a privilege for the adequate exercise of which the most painful discipline of centuries is no disproportionate preparation. We had supposed that this creed was now so universally accepted, at least by Liberals, that it would be impossible for such a war as the war of American independence to be again waged by an English Ministry; and that all Liberal statesmen of eminence and many Conservatives would now take the line which Lord Chatham was one of the few to adopt then. If Canada should ever assert its own independence in a tone that assured us of the unanimous purpose of the inhabitants to be ruled only by the bayonet if ruled by us at all, who can doubt for a moment that we should now cut Canada adrift rather than assert so hateful an authority? Yet, to our great surprise, we find it assumed as axiomatic by our correspondent, that respect for the political liberty of reluctant provinces, colonies, or races, can never be supposed for a moment to outweigh the proprietary rights, the claim of *ownership*, in the imperial power. We hold otherwise. Indeed, we should scarcely be able ever to plead political *principles* as distinguished from mere selfish expediency again, if we did *not* hold otherwise:—and we do not think it is difficult to enumerate the conditions which draw the widest possible distinction between the cases of Ireland, India, or even the Ionian Islands, and that of Venetia, with which we find them compared.

We must begin by denying *in toto* the analogy suggested between the proprietary rights of ownership, and an Imperial Government's claim to obedience. We have rarely heard it disputed that a Government can only justify its own existence on the ground of the benefit it renders to the governed,—that it becomes an intolerable evil so soon as it repudiates the position of stewardship and assumes that of ownership. A certain respect for the true interests of subordinates is no doubt a condition even of proprietary rights; there are limits beyond which the tyranny of property may become intolerable. But that which is secondary in the private, is primary in the political, sphere. Property is an institution which exists in the first place for the benefit of the proprietor; government one which could never have a single inch of ground to stand upon if it did not justify itself by the service rendered to the governed.

It is something new and strange to have to enforce this old proposition against a professed Liberal,—to have to recall that the arbitrary claim to merge the interests of the governed in the rights of the Government is of the very essence of the worst Absolutism. But if this be once admitted, it becomes necessary to concede in the broadest manner that

neither England nor any other Power can override the true interests of subject provinces and States on the ground of imperial necessity, without committing a political crime. The first question of every true Liberal would be what these *true* interests are. And we hold that his very first inquiry would be directed to ascertain how soonest and best the rights of self-government could be conferred. To every true Liberal there is something sacred in the discipline of self-government. Everything that promotes it in its highest form promotes the highest political welfare of the State or people in question. Everything that retards it or renders it impossible is of the nature of pure calamity and evil.

And here we have the true key to the relation between geographical connection and unity of race on the one hand, and political unity on the other. The former must be regarded simply as presenting, in the general way, at least in Europe, very great aids and advantages to the attainment of a self-governing *status*. The jealousies, and prejudices, and hatreds existing between alien races, are fatal obstructions to that harmonious co-operation absolutely needful for self-government. Geographical separation is another great obstruction to complete political unity. But neither in difference of race, nor in geographical division, is there any necessarily fatal difficulty. There are races which are better suited for harmonious amalgamation under one sceptre than for political isolation. There are widely-severed geographical positions which are politically closer together than neighbouring divisions of the same country. It is a question in every distinct case for a distinct practical judgment. The true criterion is this: How best can the *status* of strong and capable self-government be reached and maintained? All evidence tending to show that one race and nation, though fretting for centuries under a foreign yoke, can govern itself wisely and moderately, and defend its own independence when gained, is evidence in favour of independence. On the other hand, all evidence tending to show that a race or nation could not stand alone,—that it would be either unwilling or incompetent to govern itself,—that it would, if abandoned, lapse into anarchy, or become the prey of the nearest unscrupulous Power, or give itself up to despotism,—would be evidence tending to justify a government by the sword,—or, when it is possible, a policy of *absorption*.

Now what is the truth as regards the English government of India and Ireland? As regards India, *absorption* is of course out of the question. Its 200 millions of people might, perhaps, absorb the handful of English rulers and settlers, but the English will never absorb the Hindoos. Any real amalgamation of race is there impossible. And if by ruling them we were preventing them from learning to rule themselves, we should be guilty of a great crime. Does any one suppose this to be so? Does any one imagine that the anarchic Hindoo and Mahometan despotisms on which our Government has gradually encroached throughout India were more likely to discipline the natives of India for self-government than the British rule which has succeeded? On the other hand, is it not the almost unanimous declaration of every great Anglo-Indian statesman we have ever had that our rule in India is not and never ought to be regarded as political *ownership*, or as anything but the administration of a trust? 'Let us recollect,' they say with one voice, 'that 'we are trustees for the natives,—that if we cannot keep 'India consistently with promoting their progress, we ought 'not to keep it at all.' This has been argued again and again by such men as Lord Metcalfe, Sir William Bentinck, and Sir Thomas Munro, when their benevolent measures have been resisted on the ground of the danger to the British rule. It has uniformly been urged in reply that India is not our property, and that whenever in order to hold our ground there, political conditions shall become necessary which are injurious to the natives' further progress, we ought to withdraw. Accordingly, it has been the persistent purpose of all this class of statesmen to introduce natives more and more into the service of the Government of India, in order that eventually they may become the real rulers of India, when we who have trained them to their work have completed our task.

The case of Ireland is very different. There has never been in that unfortunate country the slightest trace of any capacity for self-government. To all clear-sighted statesmen it has been evident for hundreds of years that amalgamation and not independence is the sole condition of fitting the Irish for self-government. Left to themselves they are left to anarchy. At the same time, of course, they occupy a much more hopeful position with regard to England than the Hindoos. The policy of absorption, of *bonâ fide* amalgamation, is not only feasible, but obviously easy: the Irish, who are incapable of independent self-government, are gradually succeeded by the Anglo-Irish, who are eminently capable of it.

In the case of the Ionian Islands there are many exceptional circumstances. The military importance of the position of Corfu renders it a station coveted by every great Power in Europe. The Ionians have no power to defend it, and the Greeks have no power to defend it. Great Britain was put in as Protector by the general consent of Europe; and if we give it up, Austria, France, or Russia would instantly step into our place. The Liberal party in Greece themselves openly deprecate the annexation of the Ionian Islands. They have not, they say, the power to rule them with any firm hand. And the Ionians are obviously unfit in any way to defend their own independence. If, then, we provisionally keep the post assigned us by Europe, we are certainly giving no precedent to Austria for her tenure of Venetia.

On the other hand, if there ever were a strong case at all for throwing off a foreign yoke,—it is the case of Venetia under the new circumstances of Italy. On the one side is a strong national Government to which it can contribute great additional strength, and with which all its sympathies are identified,—a Government already deeply experienced in constitutional liberty;—on the other hand is an oppressive German Power, which has never yet granted even to its German subjects the semblance of self-government, and has never ceased to excite the deepest resentment and hatred of every Italian patriot. United to the one, Venetia would fall easily and at once into its old habits of constitutional self-control; united to the other, cycles and perhaps centuries must elapse before even a reforming Austria could venture to invite a free expression of its political wishes. For generations to come the first result of any such invitation could only be a unanimous cry to be reunited to Italy. And when we are asked why we sympathise so much more heartily with the present Liberal movement in Italy than in Austria, our reply is simply this,—that we do so, because Austria has no foreign yoke to throw off before she can begin the work of self-government. She needs no foreign sympathy. If true to herself, she can gain her own freedom against despots, soldiers, and priests, who must bow to the public opinion of their own countrymen. But on the freedom of Italy there has been, and is still, the dead weight of an oppression that vibrates with no national feeling. The indispensable condition of any public life in Italy is the removal of this foreign superincumbent mass.

THE IRREGULAR INQUIRY INTO THE ROAD MURDER.

It is very important that the perpetrator of the Road murder (if murder there has been) should be discovered: but it is of far greater importance that the spirit and the forms of our criminal jurisprudence should not be departed from even in a single instance. Those forms have been invented, or rather have been gradually developed for the sake, in part, of protecting the innocent; and for centuries they have proved efficient to answer that end. At length there comes a horrible atrocity—a little boy of four years of age is found one morning with his head nearly severed from his body:—and because an inefficient coroner and bungling gossiping constables have failed to unravel this strange and horrid mystery, men have been fain to leave the beaten track and old forms of our criminal law, and resort to new and un-English expedients for the discovery of the crime. After Miss Constance Kent's dismissal, the good people at Bath, alarmed at the failures to discover the crime, memorialised the Home Office to issue a special commission to inquire into the matter,—a request to which Sir George Lewis very necessarily and therefore properly refused to accede. But then comes a new plan,—the employment by the magistrates of Mr Slack as high inquisitor; and the sanction of the Home Office and the approval of the Attorney-General are loudly proclaimed to clear the way for his proceedings and to add importance to his inquiries. Armed with this

high authority, the favoured attorney proceeds to hold one of the strangest tribunals ever instituted. He summons Mr Kent and his family to attend at his office, and, failing in that attempt, he goes to Road Hill House and there examines various members of the miserable family for hours together, writes down their depositions, and gets the witnesses to sign the statements thus taken by him in private. Where the authority of the Home Office would not tell, another sort of influence is applied, and the little girl of five years of age is taken into Mr Slack's lap, and there questions are put to her; a course from which Mr Slack only desists on the interference of Mr Kent's solicitor. The person against whom all these depositions are to be used is neither examined, nor made aware of what is going on, nor protected by the presence of any adviser. These wonderful depositions thus got up in privacy are laid before Mr Slack's employers, the very magistrates who, in the first instance, are to act as judges in this momentous case, and become, as Mr Slack and the bench agree, the private property of the magistrates. On Thursday, the 27th of last month, the magistrates met in private with closed doors at Trowbridge; Mr Slack there produced his portfolio filled with these irregular depositions, and, after a conference with this inquisitor, the warrant was issued which led to the arrest of Elizabeth Gough.

The bare narrative of the way in which these depositions were got up and of the process by which the worthy magistrates prepared their minds for the impartial discharge of their judicial functions is enough to startle any one who keeps any sense of justice or fair play in his mind. Mr Slack had in his office a moral engine of a powerful kind: he had the authority of the magistrates of the county and the sanction of Downing Street. No man could resist such an inquiry without incurring the suspicion of guilt, and no man could submit to it without placing himself in no slight degree at the mercy of the inquisitor: nothing on earth can be more unfair than putting persons to such an alternative. We are far from admiring the course which Mr Kent pursued, of submitting to the inquiry, and then having it watched by his professional adviser and throwing obstacles in the way of its prosecution. But we do say that the proceedings of the authorities placed him and every member of his household in a position of extreme and needless difficulty, and that the inquisition established under Mr Slack's presidency was in kind most unusual, was conducted in a manner the most unprecedented, and that Mr Ribton truly characterised it when he said that it "was utterly alien to the spirit of the English law" and "subversive of every known principle of English jurisprudence." It is true that this inquiry, notwithstanding the vaunted skill of the solicitor who conducted it, has, as yet, ended in nothing, and that the bench of Wiltshire justices has performed its evident duty in dismissing the application to commit the nursemaid for trial; but the innovations in question are not on that account the less worthy of observation and censure.

The strangeness of the proceedings in this case, however, does not end with Mr Slack, and his inquiries, and the private conferences between the accuser and the judges. Suspicion at first attached itself to the nursemaid: it could hardly be otherwise, for the child was in her custody and was taken from her room: and accordingly the girl was brought to the house of a certain police constable Dallimore, and there consigned in a sort of imprisonment to the care of Mrs Dallimore, a garrulous woman who has learned from her husband all a policeman's zeal to get a committal. After a few days, this imprisonment is said to have changed its character; the girl, however, after a short absence, being again remitted to the same person's care, and again resident under the policeman's roof. What the exact nature of this second custody was, it is not, perhaps, easy to tell. Captain Merelith, the chief constable, says "she was merely allowed to remain there (at Dallimore's house) by the recommendation of the bench, instead of going to her own home": the policeman himself describes the girl as sleeping with his wife in order that she might not run away: and the Chairman tells us that "she was not actually in custody, but merely under *surveillance*": so that the mode in which this girl was kept seems best described by a word which, fortunately for us, we have not yet learned to pronounce without using a French phrase. Now we say that to subject a suspected girl for days and nights together to this sort of *surveillance*, and to the ceaseless questioning of a not very scrupulous policewoman who afterwards appears a zealous witness against her, is a mode of procedure un-English and unjust.

The utter incapacity of the police at the critical moment immediately following the murder; the way in which the constables who arrived spent their time in gossiping with the maid servants, instead of turning up the soles of the boots and shoes of the household, and instituting a rigid search for every possible clue; the drowsy scene in Mr Kent's kitchen on the Saturday night, and the false scent on which the London detectives went,—all these and many other circumstances cause us strongly to feel that our police system needs reform to make it answer the exigencies of the country for the discovery of crime. But they do not reconcile us to the mode in which the precious time that has been lost is sought to be regained. Truth, it has been wisely said, may, like every other precious thing, be bought at too high a price; and if we are to buy the discovery of the Road mystery by the introduction into our criminal jurisprudence of such practices as these, we pray that that mystery may never be solved.

AUSTRIA AND THE ENGLISH LIBERALS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to thank you most sincerely for the fine proof you have given of your sense of the value of free discussion by permitting one of your general views of policy to be freely controverted in your columns. It would be well, indeed, if other members of the press profited by so excellent an example.

You say that the gist of my letter in your impression of the 22nd ult. is "might makes right." My position is just the very reverse. You forget that you taxed my view with being inconsistent with English principles. I showed that it represented the universal English practice; and the whole of my letter implied that I held that practice to be right in principle. You reply substantially that our profession ought to be better than our practice; but this brings you into a real dilemma. If our practice is just, then you ought to have the courage to say openly to Austria, You are justified in what you are doing; you are but acting as we do; and we are perfectly satisfied with ourselves. But, on the contrary, if our practice is wrong, and we ought to know better, and be juster men, then pray take the beam out of our own eyes, before you busy yourself with removing the mote from our brother's eyes. Preach against our own practice; reform our own misdoing; hold up the standard of truth and justice to ourselves; clear away our own sins before you begin to throw stones at Austria for acting like us. Do not do what your reply does, leave our own pleasant, profitable sins alone, and then cheaply inculcate upon others a virtue which costs us nothing, inasmuch as we have not the slightest intention of practising it to our own detriment. In respect of negro emancipation or free trade, we may with some honesty enjoy the pleasant thought that we are "impartial spectators;" for in these matters we have put away our iniquity and our folly. But whilst not a whisper is ever heard of England abandoning an important possession, much less a portion of her own territory, for the sake of its inhabitants, in what condition are we to rebuke the Austrian for showing that he shares in the same common nature with Englishmen? I really do not see how you can escape from this dilemma.

But, in truth, your proposition at bottom is visionary. You announce that a State ought to part with a valuable, or even necessary possession, because independence would be better for the natives. This is just as visionary, not one whit less, than to preach that a man ought to give up his estate to another because he would manage it better, employ the people better, or make a better use of the rent. A man who set up such a doctrine would be laughed at as demented; why is the proposal one bit more reasonable when applied to States? Did ever State do it?

You assume throughout that Austrian-Venetia must be tyrannised over, must be miserable. The assumption is gratuitous. Oppression and misery, thank God, are not eternal. Belief in improvement is the essence of a Liberal's creed. Ireland was long terribly misgoverned by England, far worse than Venetia was ever dealt with by Austria; yet Ireland at last won her way to equal rights and equal happiness with England. Lay bare the oppression of the Austrians in Venetia; war down with all your might the odious tyranny of their police, its arrests, its deportations, its senseless and futile struggle against free thought and free speech. Tell Austria that "Regia res scelus est:" that these are the natural fruits of a despotism and a bureaucracy which are callous to the affection of their subjects. But tell her also that representative, that is self, government, is an effectual and the only cure for these evils. And do not think that mere misgovernment, whatever may be our own wishes, furnishes any practical argument against a German for the surrender of Venetia. I am not aware that a single Englishman in his senses, even those who most fiercely denounced our evil doings, ever said that our mis-

rule was a title of independence for Ireland. Some strong Liberals even wished for a total emigration of the Irishry to America. The Hindoos hold our religion in horror; they tremble for their own: 80,000 armed men is the response of united England to their cry for independence.

I cannot now open a historical discussion as to the origin of the Austrian feeling and conduct towards Italy. It certainly was not in its real spirit pure aggression. If by the peace of Zurich, Austria has really become non-Italian, the Venetians may, under a constitutional rule, with representative institutions and equal rights, enjoy a full measure of happiness. Do not overlook the cardinal fact that, under a Parliamentary Government, Venetia will not be a conquered dependency, as Malta and India, and many of our colonies; but, like Scotland and Ireland, a substantive part of the Austrian Empire, an integral portion of the ruling nation, sending members to the Imperial Parliament, and governing itself as truly and as fully as Englishmen of Yorkshire or London, or Irishmen of Dublin or Cork.

But the strange thing is, that your excitement for Italy has extinguished for the moment your sympathy for the dawn of constitutional life in Austria. You have totally forgotten the people itself of Austria; you see only its court and aristocracy. 'Give me back Venetia,' you cry: 'I have no leisure to think whether you are free or despotical: I am indifferent to your Reichsrath and your efforts for freedom. What signifies if you think yourselves imperilled by the loss of Venetia? I care for Italy, give me back her province.'

Now, I answer in the words of the *Saturday Review*, in an article which apparently pleads for the cession of Venetia:—"No catastrophe would be more fatal to Italian [I add, and Continental] independence than the political ruin of the only Continental Power which can permanently impose respect on French ambition."

This is my creed—my first principle—the keystone of my feeling You do not show a trace of it. I am profoundly persuaded that England, or say rather civilisation, has no deeper, stronger, or more abiding interest than that Austria should be constitutional and strong. I say, both. A united Italy, for which your feeling is so excited, would be a miserable compensation to Europe for the breaking up of Austria's strength Dissolve Austria, and then, as the great Napoleon prophesied, France and Russia are everything, and all the rest of the Continent nowhere. The best interests of man would be destroyed.

The fate of Europe's future lies now at Vienna; it hangs on the decision whether Austria shall be Parliamentary or despotical. Parliamentary Austria would be the surest check on the rapacious propensities of France and Russia; would knit her various races into one solid State: and become the strongest guarantee of permanent peace.

Do you feel no interest for the Reichsrath? Is it not a fact of enormous value, that that powerful priest, Cardinal Rauscher, should feel himself compelled to plead in the face of the whole world to the indictment laid by the plebeian Maager against the unnational and oppressive character of the Concordat? Is it not an enormous gain that the whole world should see that it can be defended only with the most contemptible trumpery? You have no enthusiasm, no friendly greeting even for such an act, though it is made with far greater risk of loss of goods and liberty than Hampden incurred when litigating against ship-money; for if the Reactionists get the day, Maager may at any moment be sent off to a fortress.

'Wait for deeds,' you exclaim; but what deeds can be greater for the time than these vigorous blows in the Reichsrath, amidst Imperial nominees, under an absolute despotism, and in the presence of all Europe? You abandon these men to the chances of the struggle against the aristocracy, and it may be, the Emperor; whilst the emancipation of the Neapolitans makes you frantic with delight. I rejoice sincerely at their emancipation; but, for moral dignity, for willingness to endure self-sacrifice, for real world-wide importance, it is a profanation to place them by the side of the men who are combating in the Reichsrath.

I, for one, do think Venetia indispensable for the safety of Austria; and this consideration is paramount with me. But I may be quite mistaken, I fully admit, in this opinion. It is a military question; and a civilian has no right to dogmatise on such a matter. But here I take my stand,—Venetia is a military question alone. The possession of Venetia must be determined by the safety of Austria exclusively; for the safety of Austria is the safety of Europe. The day may come, when the kingdom of Italy shall have consolidated itself, and taken firm root in its proper position of being antithetical to France. When that consummation has been effected, it will be the fitting time to discuss impartially whether the great European security, the Quadrilateral, may be safely intrusted to the hands of Italians.—Your obedient servant,

A TRUE LIBERAL.

P.S.—It is a great satisfaction to me to observe that Lord John Russell, in his despatch to Sir J. Hudson at Turin, of Aug. 31, takes up substantially the same ground that I do; only I cannot assent to the doctrine that "the redemption of her military honour" would be "a just cause" to Austria for making war on Italy.

Oct. 2, 1860.

THE TREATY OF COMMERCE BETWEEN ENGLAND AND FRANCE.

THE Director-General of Customs in France has issued the following instructions relative to the tariff of cast iron, iron, and steel, of British origin and manufacture, dated Paris, Oct. 2:—

I transmitted to you on the 29th ult. the copy of the decree relative to the new tariff for cast iron, iron, and steel, of British origin and manufacture. The application of this tariff is the object of the detailed instructions contained in the present circular.

The duties established by the decree of the 29th ult. are the result of a protocol, signed by the Plenipotentiaries of France and Great Britain, specially relating to iron and steel of British origin. The general tariff, therefore, remains in force, and applicable to the entrance of the same productions of any other origin. It is, moreover, important not to lose sight of the fact that the moderate rate of duties resulting from the treaty with Great Britain only relates to the merchandise of English origin imported direct from the United Kingdom. In my circular of the 29th of June last I explained that the produce of other British possessions, either in or out of Europe, remain subject to the common duty. As a verification of direct transport from the United Kingdom, you will confine yourself to demanding the production of the ship's manifest. The certificates of origin, the production of which has been provided for by the treaty, must be delivered or *visé'd* by the consuls or consular agents at the place whence they are sent, or at the port of shipment.

According to Article 18, and as has been seen by the above-mentioned circular, the provisions of the treaty are applicable in Algeria as well as in France, only the importers into Algeria are free to choose the application of the colonial tariff when the latter shall appear to them to be more favourable. On the other hand, British productions imported into the colony by English vessels remain subject to the extra charge on account of the flag, conformably to Article 3 of the treaty, and those same vessels will have to pay the usual navigation dues in the Algerian ports.

Article 3 of the Treaty of Commerce of the 23d of January, 1860, states that the duties which it establishes "are independent of the differential duties established in favour of French vessels." As British vessels enjoy, for direct intercourse, the benefit of assimilation of flag, in virtue of the provisions of the treaty of the 26th of January, 1826, merchandise imported by such vessels is not subject to differential duties; but merchandise imported under the flag of other nations remains liable to these duties. Thus, cast iron, iron, and steel of British origin which shall be imported direct into France from the United Kingdom by vessels of a third Power will continue to pay, independently of the navigation dues according to common law, the special extra charges for flag, as established by the laws on that matter; and, in default of special surcharge, the ordinary one established by the law of the 28th of April, 1816.

On the other hand, according to Article 8 of the law of the 27th of March, 1817, the entry of cast iron, iron, and steel, is restricted to certain custom houses. This restriction remains applicable to the productions of the same kind imported from the United Kingdom under the conditions of the treaty. It now remains for me to enter into explanations relative to the application of the new tariff to English productions designated by the decree of September 29, 1860.

Rough Castings of Raw Iron.—The distinction established by the general tariff between masses of a weight less than 15 kilogrammes and those of or above that weight is suppressed with regard to rough castings coming from England. They are all subject, without distinction, to the duty of 2f 50c per 100 kilogrammes.

Purified Cast Iron (called Mazée).—The preceding observation applies also to this description, which is subject, without distinction of weight, to the duty of 3f 25c. As has been mentioned in a note annexed to the tariff, there exists between white raw iron and purified cast iron or mazée a very strong analogy; should any doubts or disputes arise, recourse must be had to an appraiser in the forms determined by the law of July 27, 1822.

Iron Filings and Broken-up Materials in Iron.—Supplementary notes to the tariff have pointed out the measures to be taken to prevent the introduction as broken-up materials of objects capable of being used in the state in which they are imported. While endeavouring to prevent abuses, it is necessary to avoid imposing useless expenses by exaggerated precautions on imports which may be of real interest for certain branches of industry.

Pig Iron and Iron in Prisms still retaining Dross.—These descriptions are subject to a duty of 5f per 100 kilogrammes; those which have been cleared of dross will come under the *regime* of bar iron. In the event of these being imported as pig iron, iron which has been cleared of dross, and not having an even appearance, a general duty of 7f established on bar iron must be applied, and in case of dispute recourse had to legal appraisement.

Iron.—The duty of 7f is applicable to iron in bars, rails of all forms and dimensions, iron in angular or in "T" form, as well as in bands of more than one millimetre in thickness, and in wire form of more than five-tenths of a millimetre in diameter, even if plated with tin, copper, or zinc. Since the application of puddling to the manufacture of steel there are to be found in the trade some kinds of steel which present to the eye a striking resemblance to iron; should any doubt be felt on the subject, recourse must be had to the processes of verification indicated by the note to the general tariff.

Sheet or Plate Iron.—These descriptions of iron are the object of a classification in accordance with commercial usages. The duty varies, not only according to the thickness, but also to the weight and dimensions, of the plates or sheets. It is important to watch over the exact application of this part of the tariff. If experience should show that it would be useful for the import custom houses to be furnished with gauges with fixed incisions, of the kind used in the trade, the directors must apply to me on the subject.

In consequence of the new reductions in the duties it becomes more necessary than ever not to allow sheet iron to be introduced as common iron. The manner of manufacturing the two kinds is not the same. Flat

bars are made either by the hammer or by being drawn between cannelated cylinders. Sheet iron is made by being drawn between smooth cylinders. Hence there is a very visible difference in the appearance. Flat bars are terminated literally by rectangular flat faces, and sheet iron by rounded and slightly undulated surfaces, unless they shall have been chiselled. In the latter case the lateral faces would be distinguished for their brilliancy and neatness. In a general way sheet iron is not made of a less width than 25 centimetres, but narrower bands may have been cut from sheets of iron, and therefore become liable, according to their thickness, to from 8f 50c to 13f duty.

The width of sheet iron of one millimetre thickness or under does not exceed four centimetres. Thin bands of iron, the width of which does not exceed that limit, and those of a less width which may have been cut with a chisel, come within the class of thin sheets taxed at 13f. The plates of iron, whether thick or thin, if cut into any irregular shape, pay 10 per cent. more than rectangular ones.

Sheet Iron plated with Tin, Copper, or Zinc.—According to the terms of the note of the tariff, cases of this article, in which shape this metal is sometimes imported, pay, like the sheets themselves, a duty of 16f.

Steel in Bars.—Bars of iron charged with steel and *massiaux* of steel are assimilated to steel, and are liable to the duty of 15f. This duty, moreover, applies without distinction to steel in bars of all kinds, whatever may be the value and the mode of manufacture (natural, puddled, cemented, or cast).

Steel in Plates.—The tariff only admits two classes of this article, regulated by the thickness, but the limit which determines the lower duty has been increased to two millimetres. Plates of steel are distinguished from bars by the same characteristics as for iron plates. It is to be, moreover, remarked that steel bars are always more than two millimetres in thickness. Thus, for this reason alone, steel bands which shall not be more than two millimetres thick must pay, like plates, the duty of 30f. Plates or disks of steel simply cut out either for circular or straight saws, or for any other purpose, enter, as far as regards the application of the treaty, into the class of plate steel; but, in order to be so classified, they must be neither polished nor dentated, nor even made thin at the edges, otherwise they would come under the denomination of steel tools or articles for clockworks.

Steel Wire.—The conventional tariff does not make any distinction for this article. All steel wire, whatever may be the diameter or mode of manufacturing it, will pay the duty of 30f. A table drawn up in the form of the general tariff, and which I transmit with these instructions, will facilitate the application of the new duties. I request the Directors of the Customs to watch over the execution of the above instructions, and to make them generally known to all the officials and to the trade.

De Forcade, Director-General of Customs.

In the course of the recent inquiry into the comparative state of French and English manufactures, the following deposition was made by M. Arles Dufour, of Lyons, before the Conseil Supérieur du Commerce:—

The silk trade, which comprises ribands and all the articles in the composition of which silk has the greatest share, produces about 600,000,000f, of which a third (200,000,000f) forms the home consumption and two-thirds (400,000,000f) are exported. The 600,000,000f are composed of 400,000,000f of raw materials and 200,000,000f of salaries and profits. Of these 400,000,000f of raw materials, in times of ordinary crops, agriculture and French spinning and throwing would provide one-half,—viz., 200,000,000f. During the latter years, which have proved so unfortunate for the silk crops, I have doubts whether they have yielded more than 140,000,000f. The remaining 260,000,000f. have been provided by China, Japan, Benga Persia, Turkey, Syria, Italy, Piedmont, Spain, Naples, &c. I must add, that in those 400,000,000f of raw material, cotton, wool, flax, gold, and silver enter for about 30,000,000f or 40,000,000f. If the Custom house duties which twenty years ago were levied upon foreign raw silk to protect French silk had not been entirely taken off, what would have become of our trade during the seven successive bad harvests? Instead of doubling in importance, it would have decreased one-half, without any advantage to our silk-growers. But, instead of doubling in the course of ten years, it would have increased threefold if, like England and Germany, she had been able to introduce without duties, and in order to mix them with silk, all other textile substances, especially cotton, wool, spun silk, shappe, flax, &c Judging by the progress made during the last ten years, and taking into consideration the impulse which the new commercial policy proclaimed by the Emperor must naturally give to the home consumption, as well as to exportation, I venture to say that before ten years have elapsed, our production will have increased to 1,000,000,000f; I also state my conviction that it would reach this figure in five years, could we, like our formidable competitors the English, Germans, and Swiss, procure without duties matters suitable for mixtures. Indeed, if we laboured and fought with equal arms—*i. e.*, with every material free from duties, we should acquire in the manufacture of mixed silk goods the same superiority and the same importance as in those articles entirely made of silk, and we should thereby have the advantage and the happiness of seeing the terrible chances of a crisis diminished for our manufacturers and our poor working classes; for, pure silks being more particularly for the use of the rich classes, are more dependent on the caprices of fashion than the mixed silks.

On account of its distance from the metropolis, which has kept it in oblivion, our industry has had the good fortune to remain unprotected, and it is to this, to the total absence of leading-strings and crutches, that it owes in a great measure its prosperity, and the importance of its exportation, which forms about 40 per cent. of the total of all French manufactured goods exported. For I do not consider the duty of 8 to 12 per cent. to which Lyons has a right, though unasked for, a protecting duty; this duty has allowed the introduction of an average of 10,000,000f to 12,000,000f of silks or ribands. An industry which exports 400,000,000f of its products, which meets in foreign markets, and of course without any protection, the competition of the silks and ribands from all manufacturers of Europe, ought to be ashamed of soliciting, or even accepting, the least protection; for the very name of protection would be a confession of fear or inferiority towards foreign competition. It would be nonsense and cowardice. St Etienne produces about 120,000,000f in ribands, of which 100,000,000f are exported, and compete, without any protection, in the English, American, German, and even Swiss markets, with those of Bâle, Créfeld, Coventry, and Vienna; and because 8,000,000f or 10,000,000f of foreign ribands are imported into France, notwithstanding a duty of 6 to 9 per cent., St Etienne is not ashamed to cry out for the maintenance and even the increase of protection! Therefore, in the interest of the pure and mixed silk and riband manufacturers, and for their honour and reputation in the mercantile world, do not allow any protection, but, on the contrary, proclaim complete freedom, which, as regards England and Switzerland, would be nothing more than fair reciprocity. But then allow textile articles of all descriptions to enter duty free. Or if, for the sake of revenue, Government subjects these articles to some duty, it must not exceed 5 or 6 per cent. *ad valorem*. I except, however, spun silk, which in reality is nothing less than raw silk, and has been by error or ignorance placed in another classification. Waste, knubs, husks, spun, are really raw silk, and ought to be duty free, as silk has been and is.

The Chamber of Commerce of Lyons has incessantly protested against the duty unjustly maintained on that class of silk. Upon the same principle all Custom house duties must be abolished on the importation, as well as on the exportation, upon waste of all description, raw or carded, pure or dyed. Here I am naturally induced to speak of dyed silk in general. When the Rhine and Switzerland formed, at least as regards custom houses, part of the French Empire, their manufacturers sent a great portion of their silk to be dyed in Lyons. It is easy to understand, without explanation, what superiority this habit gave to our manufacturers. But, according to the fable of our good Lafontaine, to crush a friend's head in order to drive away a fly, scarcely had those provinces been separated than a prohibitive duty was put upon the exportation of dyed silk. The result was that the Swiss and Rhenish manufacturers were compelled to supply themselves; they established dyers, called our cleverest chemists and workmen, and soon succeeded in dyeing as well as we do, escaping also all the inconvenience caused by the transport of the silk, the loss of time and interest, &c. I should not be surprised if the Council were still to find silly people saying that foreigners have not at Créfeld, Elberfeld, Bâle, Zurich, and Berlin the waters of the Rhône, the Saône, the Fureus, and the Gier, incomparable for dyeing. Let, therefore, French dyers enjoy the common right, and export dyed silk without any duties, but also let foreign dyed silk of all descriptions be imported free from duties. I cannot close this, already too long deposition, without touching the important question of the mode of levying the duties. For more than 30 years I have been in connection with nearly all civilised countries of the world, and have therefore been able to judge of the different methods employed, particularly in England, America, Belgium, Germany, &c, and I do not hesitate to say that the most rational and the least subject to fraud is the system of *ad valorem* duties. I was residing in Germany when Prussia conceived and executed its great political idea of the Zollverein, and I had the honour of being connected with some of the men charged with its execution. Prussia then proclaimed the principle that the duties should not be protective, but merely and always fiscal, and that they should never exceed 10 per cent. of the value. It was thought advisable to adopt specific duties, and it was agreed that, in order to remain within the limit of 10 per cent., the tariff should be revised every 10th year; but the industrial element in the Zollverein having always been in the majority, prevented any revision and any change. The result was, that on account of the many modifications introduced in the manufacturing of goods, the *maximum* duty of 10 per cent. amounts now on some articles, and particularly on the lowest, intended for the poorest classes, to 40, 60, and even 80 per cent.; also, by a wrong mode of levying the duties, the intention of legislators and the principle on which the system was based, have been completely and thoroughly changed. If specific instead of *ad valorem* duties are admitted, except perhaps for a few special articles, France will experience the same delusions and difficulties as the Zollverein, and create a permanent source of claims and recriminations on the part of England.

Agriculture.

FARMING IN BERKSHIRE.

At length we have discovered the veritable Arcadia. The land where the landowners are intelligent, considerate, and liberal; where the farmers are enterprising, contented, and prosperous; and where the agricultural labourers are provident, progressive, and well-behaved, is—Berkshire. Such at least would seem to be the state of things in that happy county, if we rely on the Prize Essay of Mr J. B. Spearing, which appears in the recently published number of the Royal Agricultural Society's Journal. We have on former occasions, when referring to the Prize Essays on the farming of various counties, noticed that the husbandry of the locality under description was painted in a somewhat rose-coloured tone, and we must say that Mr Spearing's tints are more decidedly brilliant than those of any Prize Essay on local farming we recollect. Whether the predominance in the Council of the landowning element, which has been complained of, has anything to do with the tone of the Essay, or with its successful competition for the Society's prize, we know not; but assuredly a description of the farming of a county ought not to be confined to eulogistic accounts of all that deserves eulogy, without any attempt to portray the less

favourable circumstances which affect the husbandry of the locality. Bearing in mind, however, that in the present instance the Prize Essay gives a somewhat holiday aspect to Berkshire farming, there is much of it that will be read with interest.

The last report on the husbandry of the county was that of Mavor in 1809, who referred to the then open or common fields as amongst the most prominent obstacles to improvement. At that time much of the arable land was in common field; but now, with the exception of Charlton, a hamlet of Wantage, all the common fields of the county have been enclosed and laid several. The essayist was informed that the land in Charlton would be improved 30 per cent. by an enclosure, and that estimate is a moderate one. Why the land of that place remains unenclosed we are not told, though in such an Essay the origin of so obvious an anomaly might have usefully been stated. Is there a lord of the manor who acts as dog in the manger at Charlton? Mavor mentioned the want of leases as a drawback on Berkshire husbandry in his time; but Mr Spearing tells us "there is no longer any reason why the want of leases should check improvement, there being but few landlords who will not grant them on equitable terms to enterprising and respectable tenants." This takes us by surprise. We never heard that the Berkshire landowners are distinguished from the great body of English landowners in the readiness to grant leases. We don't find even that Mr Spearing says that equitable leases or any leases are generally granted in that county to tenants of enterprise and respectability. The New Poor Law Act and the commutation of tithes are justly mentioned as affording great facility to modern husbandry. In Mavor's time the poor rates varied from 5s to 8s in the pound, and were constantly increasing. Indeed, we all know that prior to 1834 the poor rates threatened to absorb much of the rent of land in Berkshire; and that in one instance the cultivation of a whole parish was abandoned by reason of the pressure of poor rates. Now the average poor rate of the whole county is 2s 10½d in the pound.

Berkshire contains about 680,000 acres, and has a population of 170,000. The soil is generally light, a large portion of the land lying on elevated chalk hills, and much of the remainder consisting of gravel. On the Surrey side there is some light, infertile sand land, while the London and plastic clays and the Kimmeridge and Oxford clays occupy other portions. On the North of the county the green sand and gault border the termination of the chalk hills, and form very fertile corn-growing land. "In the four parishes of Charlton, Wantage-cum-Charlton, Ardington, and Hendred, much of the land is of easy tillage, and yet will carry wheat to a great bulk without being laid. It is generally planted with two white crops in succession, or in some instances with wheat and beans in alternate years, and it continues to produce good crops under this management." The account of the tillage and cropping is introduced with this flourish:—"The benefit that has resulted to agriculture from the establishment of the Royal Agricultural Society is universally acknowledged, but nothing has tended more to improve the cultivation of the soil than the publication of their Journal; through it the most improved modes of farming have been brought before the public, and the most practical experiments have been discussed and particularised, so that the English farmer of the present day is no longer left to hold the same opinions, and carry out the same system, that his ancestors and neighbours have done, but has the benefit of the most practical and scientific information that the world can produce. Of these advantages, I may safely say, that the farmers of Berkshire have been by no means backward in availing themselves; in many cases to such an extent, that to give an account in detail of many of the best systems of farming carried out in this county, would be only to repeat what has already more than once appeared in the Journal." Some useful details as to the actual cropping are then given. The system generally is that of light turnip and sheep land. The manure is now spread on the young grass seeds, instead as formerly spreading it on the clover ley immediately before ploughing the ley for wheat. The hay crop is thus increased, while the ley ground is ready for ploughing much earlier. It is found, too, that the manure so applied increases the yield of the wheat crop with perhaps some diminution of the straw. Draining is chiefly required on the London and plastic clay formations, about Windsor Park, Winkfield, Warfield, Binfield, Wokingham, and Mortimer, and on the northern wheat lands of the county. In the latter district, we obtain a glimpse of the benefits arising from getting rid of a nominal owner of land. There "is a large estate at Bussco t, which for many years had been entirely neglected, and almost left to its fate, but has recently been purchased by Mr Campbell. The new owner has just commenced draining on a large scale upon the deep system, and purposes doing the whole estate; the result is looked forward to with more interest as the steam plough is about to be introduced for its cultivation." There is not much permanent grass land in the county, and its management is commonly very bad, with the exception of some grazing land near Lechlade and Wantage, and some water meadows in the valleys of the Lambourne and the Kennet.

We pass over the account of the stock, chiefly Hampshire Down and cross-bred sheep, to note that "the dwellings of the agricultural labourers are good where they are in the hands of the landed proprietors.....Landlords no longer look upon cottages as a tax or burden on the estate, but consider them as necessary and important appendages, and in some cases a great ornament." Then we are told "education has advanced with rapid strides during the last ten years. I may say every village has its daily school; in addition to which most clergymen have established night schools, where the working classes have the privilege of attending and improving themselves." This seems a rather Squire Bountiful kind of view of the subject, but it indicates what Mr Spearing thought the landowners would affect to do if they do not do it. It is quite certain the circumstances and position of labourers in husbandry are improving, and with more freedom to farmers the improvement would be still greater.

Under the head of "Remarkable or Characteristic Farms," Mr Spearing gives a full account of the Prince Consort's farms in the neighbourhood of Windsor. They are three in number, and are in the aggregate of considerable extent.

The Flemish farm consists of 400 acres, of which 240 are arable and 160 pasture. The soil is the London clay, which has been well drained four feet deep. A plan of the buildings is given, and "great practical ability" in their erection is, we know not whether rightly or not, attributed to the Prince himself. A fixed steam engine of 12 horse power cuts chaff for food and for litter, breaks oilcake, crushes grain, and cuts and pulps roots. The land is not suitable for sheep, but a herd of pure Hereford cattle is kept on this farm. Smith's and Fowler's steam ploughs are used. The farm horses are a cross of the Suffolk and Clydesdale.

The Norfolk farm consists of 700 acres, of which 200 are arable and 500 grass. The soil is on the "Bagshot sand formation, upon which there is a large deposit of gravel, and is altogether of lighter tillage." The homestead is of old date, with thatched barns, open yards and sheds, and the stock consists of a herd of 30 Devon cows, with their produce.

The Home or Shaw farm is 900 acres, of which 130 are arable and the rest pasture. This farm adjoins the Thames, and part consists of a rich alluvial soil, with a mixture of gravel; the rest is on the London clay. "The farmstead is of the most costly kind, and almost baffles description; here and at the dairy farm-buildings are to be seen 270 head of pure Shorthorn cattle, of which 100 are cows kept for dairy purposes." The horses are Clydesdales, and a breeding flock of Cheviot ewes is kept. The farm-horses are bred on the farm. The Windsor pigs known to most of the frequenters of the Baker Street Cattle Show are kept and fed on this farm. "The Royal dairy is in itself a perfect gem." With this, fearing our readers may be cloyed with rural sweets, we close our remarks on the Prize Report on Berkshire Farming.

Literature.

COMMERCIAL LITERATURE.

SUPPLEMENT TO THE EDITION OF M'CULLOCH'S COMMERCIAL DICTIONARY PUBLISHED IN 1859; comprising the late Treaty of Commerce with France, the New Tariff for the United Kingdom, the New Indian Tariff, with a great Variety of Miscellaneous Information in regard to Commercial Subjects. Longman.

MR M'CULLOCH was so unfortunate as to issue a new edition of his very valuable Dictionary just before the great financial changes in England and India which the present year has witnessed. A Supplement thus became necessary, and here he has given it to us with many miscellaneous additions of great interest. Thus he gives us the total values of the exports and imports of the United States for the year ending 30th June, 1859; an account of the value of the French exports and imports for the last three years; and much other information of the greatest immediate utility.

URE'S DICTIONARY OF ARTS, MANUFACTURES, AND MINES. Longman, Green, Longman, and Roberts.

THE tenth part of the new edition of this most useful work keeps pace with the excellence of the preceding numbers. Among the many articles of interest with which it abounds, we particularly note an article on "Manure," so important to the agricultural interests of this country, in which will be found a paper very valuable to the agricultural interest, by Messrs Lawes and Gilbert, in controversion of Professor Liebig's "Mineral Theory," with especial reference to his statement that "the crops on a field diminish or increase in exact proportion to the diminution or increase of the mineral substances conveyed to it in manure." There is also a valuable article on "The Mineral Statistics of the United Kingdom," which gives a condensed view of the mining industries of these islands; which is followed by one on "Mines," and another on "Mining and Mining for Coal." We may notice that the wood-cuts which accompany these papers are remarkably well executed, and will be found invaluable as aids in elucidating the subjects through which they are dispersed.

THE HANDBOOK OF BOOK-KEEPING BY SINGLE AND DOUBLE ENTRY. Cassell, Ludgate hill.

THIS is one of Cassell's elementary handbooks, which exhibits the principles of book-keeping in a concise and simple form, and is well adapted for enabling men of ordinary capacity to perfect themselves

in this indispensable qualification for a man of business. In addition to this book, Mr Cassell has published account books arranged to be used in connection with the little volume before us, and by the careful study of both, any one may become an accomplished bookkeeper.

GENERAL LITERATURE.

The Westminster Review. October. 1860. Manwaring.

The first article in this number is by far the ablest it contains. We differ entirely from its principles, but wish to acknowledge its ability in the most explicit terms. It is on Neo-Christianity, and consists in a very able criticism of the false position of writers like Dr Temple, Mr Baden Powell, and other writers in the "Essays and Reviews" recently published, who, while they earnestly maintain that the Divine Revelation contained in the Bible is exactly of the same kind as that contained in all other human histories and literatures, still insist on the study of the Bible as the first of human duties, and defend the position of the English Church in relation to it. This position is examined and assailed with great power, and all the resources of a cultivated mind, in the article in question. The writer takes up the position of a Pantheistic Positivist. He considers the human race as a whole as a "colossal man," whose thoughts widen with the progress of the ages. He identifies himself with the scientific naturalists of the day in excluding everything but "Law" from the universe, and leaves no room either for the free personality of man, or the free personality of God. This is not the place to criticise or assail his principles. We can only say that he demolishes with great power the unreal intellectual position of most of his opponents.

The paper on Robert Owen is rather dull. Owen's dulness has infected his reviewer. He was one whose career required the criticism of a rich mind. The narrow philanthropies and wretched philosophy which busied him throughout his life are scarcely worth a complete delineation. But the powerful personal influence which he never ceased to exert, in spite of the intellectual poverty of his mind, would have made the subject of a striking essay in the hands of an abler reviewer. The article on "The Organisation of Italy" is sensible but poor. The paper on Mr Thackeray as a photographer is thoughtful and interesting, but the points are not clearly worked out,—the illustrations not sharply enough impressed.

The review of current literature seems, as usual, to be carefully and thoughtfully done.

The Cornhill Magazine. October. Smith and Elder.

This is an interesting number. Mr Ruskin's paper on his new system of Political Economy is not more clear or able than its predecessors. He reproduces the late Robert Owen's theory that equal labour-exchanges are the true criterion of equal values,—wherever skill and strength are equal. "True equity" consists, he says, "in giving time for time, strength for strength, skill for skill." And in reference to the host of difficulties thus raised, he says:—"The difficulty of determining the monetary value of skill renders the ascertainment (even approximate) of the proper wages of any given labour in terms of a currency a matter of considerable complexity, but they do not affect the principle of exchange. The worth of the work may not easily be known, but it *has* a worth, just as fixed and real as the specific gravity of a substance, though such specific gravity may not be easily ascertainable when the substance is mixed with many others. Nor is there so much difficulty or chance in determining it, as in determining the ordinary maxima and minima of vulgar political economy. There are few bargains in which the buyer can ascertain with anything like precision that the seller would have taken no less,—or the seller acquire more than a comfortable faith that the purchaser would have given no more."

First, we must remark on this that Mr Ruskin appears to us to have here abandoned entirely his great principle that bad work should be paid no less than good work so long as you employ it at all. Skill and strength and care make the distinction between bad and good work. If they are to enter into the value of work, then bad workmen *may* be employed at less wages than the good, because their work will embody less skill.

Secondly, we observe that political economists have always assumed that equal labour-exchange, where the labour is of the same quality, *is* the actual and necessary origin of permanently equal values. They have only denied that it is possible to make this a true criterion of value, either as regards commodities or labour. Different men's labour in different arts is seldom or never exactly of the same quality. Mr Ruskin admits skill and strength as entering into the question of value. What measure is there of skill and strength but the desire of men to possess the fruits of it? How is the skill of a first-rate carpenter to be measured against the skill of a first-rate sailor! Mr Ruskin says it is equally difficult to measure what men are inclined to give for labour. That problem at least can be tentatively solved. The other cannot be solved at all.

Lastly, we would remark that Mr Ruskin's theory gives an entirely different rule for the value of commodities from that given for the value of labour. Here he takes *demand* into the question very arbitrarily, and in a very mistaken way. He says:—"The exchangeable value of a commodity is that of the labour required to produce it, multiplied into the *force* of the demand. If the value of the labour $= x$, and the force of the demand $= y$, the exchangeable value of the commodity is xy, in which if either $x = 0$, or $y = 0$, $xy = 0$." A better instance of Mr Ruskin's confusion of thought could not be given. If this were true, a doubling of "the force of the demand" ought always to double the value, if the value of the producing labour remains the same. Practically as we know where the cost of production is not increased, the increase in demand usually results in diminishing the value of the article supplied, because the cost of producing many of the same sort is less in proportion than the cost of producing few. The labour which produces ten articles can often with equal ease produce fifteen if there be a demand for fifteen. The labour, therefore, is not increased in value. The demand is increased fifty per cent., and yet the value of each article is lowered. Does Mr Ruskin say it *ought* to be increased? We cannot see why it should.

Then, again, what is "force of demand"? The *number* of demanders is a very imperfect test, we should think, of the *force* of demand. A starving population demand bread with much more "force" than an aristocracy in want of diamonds demand diamonds.

These are but a few of the more important criticisms which Mr Ruskin's confused speculations suggest.

The other papers in the number are many of them good. Mr Trollope's tale is kept up with great power. Mr Thackeray's lecture on the *fourth* George is the best lecture of the four. There are some striking verses of Mrs Browning's on the "Forced Recruit at Solferino," and other papers of apparent interest.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

No other portion of the tariff to be imposed on British goods, in virtue of the commercial treaty, has been published than that relative to iron and steel given in the last Economist. This has occasioned some little surprise, inasmuch as there is good reason to believe that the tariff on articles in metal, machinery, cutlery, carriages, objects in leather, &c., &c., has been fixed, and was to have been published at the same time as that on iron and steel. Perhaps the delay is owing to certain difficulties which in well-informed quarters are stated to have unexpectedly arisen. What they are I have not been able to learn exactly; but I should not be surprised if one of them were to turn out to be the obligation imposed on the French Customs of buying, with an addition of 5 per cent. on the declared value, all goods presented for import at *ad valorem* duties which may appear to be worth more than they are entered for; and, perhaps, another is as to the manner in which goods brought to France under the treaty shall be proved to be British. On the first of these points, it is probable that the French Government may have represented that the obligation in question will at all times be a vexatious one, and may even become excessively onerous in a pecuniary point of view. On the second, the probability is that the French wanted the British origin of goods imported to be vouched by certificates of French consuls when they come from towns where such agents are established, and of magistrates where there are no consuls; and that our Government objected to this as giving French consuls a certain controul over British exports,—as, in fact, in some degree placing British manufacturers under their jurisdiction. In themselves these difficulties do not appear excessively serious; but I hear that the French complain that, in dealing with them, the English Foreign Office displays a pertinacity which in their eyes seems ungracious, and an unpleasant contrast to the accommodating spirit which M. Rouher, Minister of Commerce, M. Michel Chevalier, and the other French gentlemen concerned in the treaty, have all along displayed and display still. Perhaps some of your readers may be surprised to see the Foreign Office mentioned in this matter, the general belief being that the negotiation of the details of the treaty has been left entirely to Mr Cobden; but I hear that the Foreign Office has of late concerned itself very actively in the business, and that as neither it, nor its representative here (Lord Cowley, the Ambassador), understands much about commercial matters, its interference causes a prodigious quantity of telegraphing and despatch-writing, which of course produces delay in the conclusion of the treaty.

A gentleman who has had an opportunity of inspecting the tariff, so far as it has been drawn up, assures me that it is conceived in a very liberal spirit; that, in fact, on a vast number of articles it has made larger reductions on the old duties than was to have been expected, and that even the duties which replace prohibitions are excessively moderate. Among other things, cutlery will, I am assured, be admitted on the most reasonable terms; and I have some grounds for believing that the duty on carriages will not exceed 10 per cent. on the value—a rate which, considering the taste for English vehicles in this country, can hardly fail to be most advantageous to the trade.

The official *Moniteur* corrects an error in the recently published tariff on iron and steel. In it "filings" are put down as to pay a duty of 3f 25c the 100 kilogrammes (2 cwts) from the 1st of the

present month, and 2f 75c from 1864; but they ought, it is stated, to have been marked "exempt."

Of course the ironmasters are very much dissatisfied with the new tariff; it is, they say, more severe than the treaty had led them to apprehend: still they do not make the loud outcry against it that was to have been expected.

The Director-General of the Board of Customs has issued a circular to all the Customs authorities, giving instructions respecting the carrying out of the new tariff on steel and iron. He states first of all that it is only applicable to those articles of British origin when imported direct from the United Kingdom. He decides off-hand the question relative to certificates of origin, which I stated above to be under discussion between the two Governments, by declaring that "they must be delivered or *viséd* by the consuls or consular agents of France at the place from whence the articles are sent, or at the port at which they are shipped." He says that "the production of certificates of origin has been provided for *by the treaty*," but I have searched in vain for the clause in which they are mentioned. He says: "According to Art. 18, the provisions of the treaty are applicable in Algeria as well as in France, only the importers into Algeria are free to choose the application of the colonial tariff when the latter shall appear to them to be more favourable"; but the treaty says nothing of the latter stipulation. The circular at some length gives instructions respecting the manner in which the tariff is to be applied to different articles presented for import; they are of a purely technical character, but appear to be not illiberal.

The circular decides, I presume authoritatively, the question which has been raised in London as to whether or not, under the commercial treaty, a differential duty will be imposed on British goods imported into France by British vessels. It says:—

Art. 3 of the Treaty of Commerce of the 23rd January, 1860, states that the duties which it establishes are independent of the differential duties established in favour of French vessels. As British vessels enjoy, for direct intercourse, the benefit of assimilation of flags, in virtue of the provisions of the treaty of the 26th January, 1826, merchandise imported by such vessels is not subject to differential duties; but merchandise imported under the flag of other nations remains liable to these duties. Thus, cast iron, iron, and steel, of British origin, which shall be imported direct into France from the United Kingdom, by vessels of a third power, will continue to pay, independent of the navigation dues according to common law, the special extra charges for flag, as established by the laws on that matter, and, in default of special surcharge, the ordinary one established by the law of 28th April, 1816.

This is clear enough; but really before the circular was issued the matter was in considerable doubt. For on the one hand Article 3 of the treaty says in express terms:—"It is understood that the rates of duty mentioned in the preceding articles (all those affected by the treaty) are independent of the differential duties in favour of French shipping, with which duties they shall not interfere." And yet, on the other hand, the ordinary tariff of the French Customs declares expressly that in virtue of the treaty of 1826, "English productions of all kinds imported by English vessels direct from England or her possessions in Europe shall pay the duties applicable to French vessels." Perhaps we may assume that the English negotiators of the treaty had not this convention of 1826 fresh in their minds when they drew up Article 3, or no doubt they would have worded it differently.

In connection with the shipping question, it may be convenient to reprodnce Article 10 of the treaty relative to local dues:—

The two high contracting parties reserve to themselves the power of levying upon all articles mentioned in the present treaty, or upon any other article, landing or shipping dues, in order to pay the expenses of all necessary establishments at the ports of importation and exportation. But in all that relates to local treatment, the dues and charges in the ports, basins, locks, roadsteads, harbours, and rivers of the two countries, the privileges, favours, or advantages which are or shall be granted to national vessels generally, or to the goods imported or exported in them, shall be equally granted to the vessels of the other country, and to the goods imported or exported in them.

In the course of the recent inquiry into the state of French manufactures made by the Superior Council of Commerce, the opinion was expressed by more than one witness, that it would be desirable to bring the new duties into force at once, instead of waiting for the periods fixed in the treaty; those periods being the 1st of July last for coal and coke; the 1st of the present month for iron and steel; the 31st of December next for worked metals, machines, tools, and mechanical instruments of all sorts; the 1st of June, 1861, for yarns and manufactures in flax and hemp; and the 1st of October, 1861, for all other articles. But the Chamber of Commerce of Rouen (a stronghold of Protectionism) has just adopted a series of resolutions declaring in somewhat energetic terms that no modifications whatever ought to be made in the dates fixed in the treaty: the manufacturers, they say, placed confidence in the "solemn engagements" entered into with them on this point, and made their commercial operations in consequence. The Chamber of Commerce of Mulhouse has adopted a similar resolution.

The shareholders of the Compagnie des Entrepots et Magasins Generaux de Paris, formerly the Docks Napoleon, resolved in a recent meeting that 25,000 new shares of 500f each should be issued, and that a loan of 7,500,000f may be raised if required. The affairs of the Docks Napoleon have been definitively wound up,—an operation of considerable difficulty, owing to the scandalous frauds which were committed. The newly organised Company commences operations with a fair chance of success.

The English Vice-Consul at Pau, Mr Tayler, has addressed a letter to the local papers warning French traders against some swindlers in England, who get goods for which they never pay, or give bills which turn out to be forged. It may be remembered that some time ago the French Minister of Commerce addressed a circular to the Chamber of Commerce requesting merchants to be on their guard against swindlers in England and Scotland.

The Bourse has undergone some fluctuations since my last. To-day it has been somewhat animated, owing to the report that one of the principal objects of the Warsaw conference will be to form a Congress for the settlement of the affairs of Italy. The quotations are as follow:—

	Thursday, Oct. 4.		Thursday, Oct. 11.

The following is an account of the markets:—

Flour at *Paris* has again risen in price, without however any great activity in affairs. Yesterday the quotation was 59f to 64f the sack of 159 kilogs. Four marks have also risen: yesterday they were 62f for the current month and for November.

Wheat.—At *Paris*, sales were more active yesterday than in the preceding market, and quotations were 36f to 38f the sack of 120 kilogs for old wheat, 35f to 37f for new. For the lower sorts there is a rise on last week's prices. Of the provincial markets, 93 present a rise of from 20c to 2f 80c the hectolitre; 12 a fall of from 33c to 1f 98c; 21 have remained unchanged, and 33 are reported firm.

Cotton.—The sales at *Havre*, in the week ending Friday, were 12,359 bales, and the importations only 1,753. The brokers fixed the closing prices at 1f higher for very low New Orleans and Georgia, and for low New Orleans and Mobile, leaving other sorts unchanged. Low New Orleans was consequently 85f the 50 kilogs, and very ordinary ditto 94f. The arrivals exceeded 4,000 bales. The stock on the 1st was 166,100. A fair amount of business has been done this week, and low New Orleans has been firm, at 84f to 85f.

Coffee.—The sales at *Havre*, in the week ending Friday, were 400 sacks Hayti Port-au-Prince, 79f to 80f 50c the 50 kilogs in bond; 584 sacks Rio not washed, for delivery, 77f; and a small lot of Ceylon plantation, 123f duty paid. In addition, various lots of damaged Hayti and Ceylon were sold. The stock on the 1st, excluding the quantities in the Customs, was 5,109 tons. This week, a fair amount of business has been done: Rio, 76f 50c; ditto washed, 87f 50c; Gonaives, 82f; Port-au-Prince, 79f 50c; and some lots of different sorts of damaged. At *Nantes*, last week, a lot of Java went at 120f duty paid, and some of Reunion at prices kept secret. The arrivals were 500 sacks and 100 tons Malabar. This week, some Reunion "fève pointue" has been sold at 131f 52c. At *Bordeaux*, last week, 7,788 sacks Laguayra went at 88f to 90f in bond; 774 Rio washed and not washed, 79f 50c to 92f; a small lot of San Yago, at prices kept secret; and 150 sacks Mysore, at 117f 50c duty paid. This week, the demand has been active, but prices are not given. At *Marseilles*, last week, the demand was active, about 12,000 sacks Rio having been sold at 73f to 75f 50c the 50 kilogs in bond, 2,500 sacks at prices kept secret, 6,500 sacks Maracaibo at 80f, and some other lots.

Sugar.—The demand at *Havre*, in the week ending Friday, was not active: 315 casks French West India at 48f 50c to 49f the 50 kilogs; a small lot ditto "usine," 53f; 286 casks Havana, 36f the 50 kilogs; 1,173 ditto, inferior quality, 30f. The importations were about 600 casks. The stock of French West India on the 1st was 10,500 casks. This week, sales have not been active. French West India, 49f; Reunion, 52f 50c. At *Nantes*, last week, upwards of 1,800 bales Reunion "gros grain" went at 56f to 56f 50c the 50 kilogs duty paid; 3,615 Mauritius gros grain, 57f 25c; a small lot of Havana, very high quality, 57f. The arrivals were about 2,700 casks. The stock on the 1st was 132,000 bales Reunion, Mauritius, and Mayotte, about 8,000 French West India, 2,567 casks Havana, and a small lot of Java. This week, some rather large sales have been made: Reunion, 51f 50c; French West India, 48f 50c. At *Bordeaux*, last week, about 220 casks French West India went at 47f 50c to 48f; 4,610 bales Reunion, at 48f to 56f. The stock on the 1st was 5,348 casks French West India, 5,077 bales Reunion, 12,877 sacks Mauritius, and 4,927 casks Havana. This week, the sole sale has been a small lot of damaged West India. At *Marseilles*, last week, some lots of Reunion were sold, but nothing was done in French West India.

Indigo.—Business at *Havre*, in the week ending Friday, was dull, only 20 cases Bengal having been disposed of. There were no arrivals. The stock on the 1st consisted of 1,402 cases Bengal, 64 Java, 39 Madras and Kurpah. This week, there have been some sales of Bengal at prices kept secret. At *Bordeaux*, last week, 31 cases Bengal, 4 Kurpah, and 17 Guatemala went at prices previously established. This week some lots of Kurpah have been sold—prices not given.

Hides.—At *Havre*, in the week ending Friday, the demand was not

active: 500 Buenos Ayres dry, 132f 50c the 50 kilogs in bond; 1,175 ditto salted, duty paid, 78f to 85f; 210 Monte Video salted, 75f; 700 Rio Grande dry, 124f; 800 Rio Janeiro salted, 62f 50c; 100 Pernambuco drysalted, 96f; 500 Bahia dry, 110f; 2,200 horse salted La Plata, 97f to 104f the 100 kilogs. In addition various lots of damaged were sold by public auction. The arrivals exceeded 14,000. Sales this week have been unimportant: New York, 55f 75c to 56f; Pernambuco drysalted, 96f; Valparaiso dry salted, 102f 50c to 115f.

Wool.—At *Havre*, in the week ending Friday, the sales were only 22 bales Monte Video and Buenos Ayres unwashed, 1f 45c to 2f 40c the kilog; and a lot of Alpaca, 5f 50c. The arrivals were about 200 bales. No sales have been made this week.

Tallow.—At *Havre*, last week, a small lot of New York was sold at 70f the 50 kilogs, and the arrivals were about 250 casks Russian and other sorts. This week, two lots of Russian, for delivery in November, have been sold at 69f the 50 kilogs. At *Paris*, yesterday, the 100 kilogs were 142f 25c, a small decline on last week's prices.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. first quality, were 103f to 104f the hectolitre; Montpellier, 86 deg, 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 132f 50c; beetroot, first qualiity, 108f.

St Petersburg, Oct. 1.

A project is on foot for establishing in this city a Discount Bank with a capital of 12,000,000 or 13,000,000 silver roubles (about 2,000,000*l*), and it has obtained, it is alleged, promises of support from several foreign bankers.

COMMERCIAL AND MISCELLANEOUS NEWS.

The French Government has been applied to for the repeal of the law relating to the import of rice into Senegal by foreign vessels; the object being to afford increased facilities for the supply of this, the chief necessary of the population in the article of food, by enabling foreign vessels to import it at all times, which they cannot now do.

During the quarter ending October 1, no less a quantity than 1,139,983 tons 7 cwts of coal has been entered at the Coal Exchange as having been conveyed to the metropolis either by rail, sea, or canal. Of this immense tonnage, which shows a great increase upon the corresponding quarter of 1859, 871,216 tons were seaborne, 264,495 tons 2 cwts by railway, and 4,272 tons 5 cwts by canal. Of the seaborne, 308,533 tons were from Newcastle; 252,739 tons from Sunderland; and 179,425 tons from Hartlepool. Of the railways, the North-Western carried 153,893 tons 4 cwts; the Great Northern, 85,547 tons 12 cwts; the Eastern Counties, 20,169 tons 1 cwt; the Midland, 16,069 tons; the Great Western, 13,647 tons; the South-Western, 4,476 tons 6 cwts; the South-Eastern, 3,612 tons 19 cwts; the Hertford, Luton, and Dunstable, 1,153 tons 12 cwts; and the London, Tilbury, &c., 545 tons. The total supply to the metropolis from all sources during the present year has been 3,687,319 tons 14 cwts; of which 2,663,565 tons were imported, and the rest carried by the respective railway companies named. The increase of imported coal during the nine months of the present year has been 286,426 tons; by railway, 63,717 tons; and by canal, 557½ tons.

The total quantity of coal and coke exported from the various coal-ports of the United Kingdom during the month of September was coal 651,206 tons, and of coke 23,146 tons. Of this quantity, which shows a slight decrease when compared with the returns of the previous month, Newcastle-on-Tyne exported 184,363 tons of coal, and 12,695 tons of coke; Shields, 4,441 tons of coal, and 216 tons of coke; Blyth, 9,735 tons of coals; Sunderland, 103,658 tons of coal, and 1,169 tons of coke; Hartlepool and West Hartlepool, 66,057 tons of coal, and 4,194 tons of coke; Middlesborough, 12,763 tons of coal, and 1,454 tons of coke; Hull, 17,460 tons of coal, and 27 tons of coke; Liverpool, 35,328 tons of coal, and 889 tons of coke; Cardiff, 115,252 tons of coal, and 78 tons of coke; Swansea, 24,695 tons of coal, and 172 tons of coke; Newport, 17,216 tons of coal, and 215 tons of coke; Llanelly, 6,958 tons of coal, and 1,705 tons of coke; Glasgow, 3,680 tons of coal, and 326 tons of coke; Alloa, 3,398 tons of coal; Charlestown, 2,707 tons of coal; Troon, 7,681 tons of coal; Ardrossan, 7,486 tons of coal; and St David's, 5,440 tons of coal. The total quantity of coal and coke shipped during the month to London and other ports in the United Kingdom was of coal 850,551 tons, and of coke 4,719. Of this quantity, which is greater than that shipped during the preceding month, Newcastle shipped 193,255 tons of coal, and 647 tons of coke; Blyth, 9,253 tons of coal; Sunderland, 136,298 tons of coal; Seaham Harbour, 64,360 tons of coal; Hartlepool and West Hartlepool, 116,870 tons of coal, and 95 tons of coke; Middlesborough, 16,844 tons of coal, and 110 tons of coke: Goole, 6,088 tons of coal; Troon, 68,500 tons of coal; Swansea, 14,449 tons of coal, and 6,082 tons of coke; Llanelly, 24,608 tons of coal; Cardiff, 67,503 tons of coal, and 1,224 tons of coke; Ardrossan, 6,601 tons of coal; Newport, 54,549 tons of coal, and 199 tons of coke; Maryport, 33,114 tons of coal; Whitehaven, 14,261 tons of coal, and 105 tons of coke; and Charlestown, 5,663 tons of coal. The number of vessels, British and foreign, engaged in the coal trade during the month was 7,055, of which 4,719 were engaged in the home, and 2,336 in the over-sea coal trade.

An account of the amount of bank notes authorised by law to be issued by the several banks of issue in Ireland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 22nd day of September, 1860:—

Name and Title.	Circulation Authorised.	Average Circulation.	Amount of Coin Held.
	£	£	£
Bank of Ireland	3,728,423	3,001,860	731,590

Under a continued moderately active demand during the past three days the market has assumed a buoyant tone, and previous rates are supported. The reported sales since our last amount to 7,000 bales, the market being firm yesterday, with less offering at the close. We quote:—

New York Classification.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	7	7	7	7¼
Good ordinary	8¼	8¼	8¼	8¾
Middling	10⅝	10¾	10⅞	11⅛
Good middling	11¾	12	12¼	12⅝
Middling fair	12¼	12¼	12¾	13¼

The arrivals have been from Texas, 497 bales; New Orleans, 1,122; Mobile, 371; Georgia, 1,540; South Carolina, 770; North Carolina, 19; Baltimore, 4—total, 4,323 bales. Total import since 1st inst., 15,891 bales.

New York, Sept. 29.—There continues a steady fair demand for this staple, and the buoyant tone previously mentioned is still apparent. The sales for the three days aggregate 7,300 bales, including 1,150 good middling, in transit from New Orleans to Liverpool, with 11-16d freight, supposed at 11¼ cents. The market closed firmly yesterday, with a fair inquiry.

LIVERPOOL MARKET.—October 12.

The animated demand for cotton noticed in our last has continued, though with less intensity, during the past week. The trade have bought freely, and the business done by exporters and speculators has been large. The import, excepting of Surat, has been trifling, and again a large reduction of stock has taken place. Prices of all qualities of American slowly advance, and some of our quotations have been raised 1-16d per lb. Egyptian are fully more saleable. Brazil have partially advanced ⅛d per lb. East India must be quoted ⅛d per lb dearer. The sales to-day are 10,000 bales. The market is firm. The reported export amounts to 18,490 bales, consisting of 6,140 American, 270 Brazil, and 12,080 East India

Dated the 11th October, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22.112,936	Securities	29,168,055
Public Deposits	6,583,944	Coin and Bullion	15,425,613
Private Deposits	12,813,771		
	41,510,651		44,593,668

The balance of Assets above Liabilities being 3,083,017*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£643,671
A DECREASE of Public Deposits of	248,081
An INCREASE of Other Deposits of	807,222
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	362,626
A DECREASE of Bullion of	443,475
A DECREASE of Rest of	721,571
An INCREASE of Reserve of	156,155

The present Bank returns are not so unfavourable as might have been anticipated, but it is evident that some of the 1,516,308*l* notes which were drawn last week from the reserve, and which increased the circulation 1,211,985*l*, have found their way back again in the present return in the shape of other deposits, which have increased 807,222*l*, and have helped, with the decrease in the bullion of 443,475*l*, to decrease the circulation as compared with last week 643,671*l*. The decrease in the Government deposits is 248,081*l*, in the other securities 362,626*l*, and in the rest 721,571*l*, which latter arises from the payment of the dividends on Bank stock. The increase in the reserve is 156,155*l*. On the whole, therefore, the position of the Bank is not much weakened; but the last bullion transactions of the present week do not appear in the present return.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,785,956	£ 20,862 690	£ 22.028 392	£ 23,043,159	£ 22,112,936
Public deposits	10,694,649	8,502,326	5,356 897	9,378,802	6,583,944
Other deposits	8,850,077	9 067,123	14 569,366	13,799,686	12,813,771
Government securities	14,443,637	10,560,607	10.809,467	11,219,969	9,663,460
Other securities	13,194,789	22,398 877	14,817,709	19.897,989	19,582,595
Reserve of notes & coin	10,837,670	4,894,863	12,770,871	9,604,274	8,647,308
Coin and bullion	16,305,050	10,109,943	19,496,991	17,268,799	15,425,613
Bank rate of discount	2½ p. c.	7 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96¾	88	96¾	96	93
Average price of wheat	41s 9d	55s 8d	42s 8d	42s 5d	58s 3d
Exchange on Paris (shrt)	25 17½ 22½	25 22½ 30	25 10 17½	25 10 15	25 12½ 20
— Amsterdam ditto	11 18 18½	11 16 17	11 15 15½	11 14½ 14¾	11 14¼ ⅜
— Hamburg (3 months)	13 9½ 9¾	13 10 11	13 7 7½	13 5¾ 5¾	13 5¾ 6¼

In 1850, money was easy at 2 per cent. The Commissioners of the National Debt had a surplus of 860,000*l* to invest. Advices from America represented enormous speculations in railway securities as going on. The Treasury Notes of the United States outstanding at that time amounted only to 266,839 dols.

In 1857, the great panic had set in in the United States and on the Continent. There was an extraordinary pressure for money, the value of which was rising in every market. The Bank of France had fixed their rate of discount at 6½, while the Bank of England on the 12th announced an advance from 6 to 7 per cent. Consols had fallen to 88, being 2 or 3 per cent. below the price at which they stood during the gloomiest period of the ensuing crisis; but the public were absorbing stock with avidity. The siege of Delhi was dragging on, and the British in Lucknow were still unrelieved, General Havelock meeting with obstacles insuperable save by time.

In 1858, the position of affairs was strikingly altered. The dictation assumed by France towards Portugal attracted attention, but did not prevent Consols touching 98½. The Turkish 6 per Cent. Bonds of 1854 were quoted 94 ex div., and the loan of 1858, issued at 80, 1 prem. The bullion in the Bank was verging on the highest point of the year, although some remittances of gold were being made to Constantinople on account of the loan. The payments on the Indian Debenture loan were in progress, but seemed to have but little effect on the money market. On the Continent, however, money was becoming dearer in consequence of the endeavours of the Bank of Vienna to attract specie.

In 1859, the rate of money was 2½ per cent., and was very abundant. The principal feature was the great rise in the Indian loan, which was quoted at 102½, or 5½ per cent. premium. The public watched the events in Italy with intense anxiety, the settlement of the "Roman Question" being then, as now, the great difficulty.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 4,344,712*l*; in 1857, a deficiency of 12,731,754*l*; in 1858, a deficiency of 248,343*l*; and in 1859, a deficiency of 6,098,303*l*. In 1860, the deficiency is 6,768,824*l*.

DISCOUNT AND MONEY MARKET.—The indications of an active demand for money which we noticed last week, have been fully borne out by the demand which has actually taken place, coupled with bullion operations of a very extensive character, and which, if continued, must infallibly lead to a rise in the rate of discount by the Bank of England, and, we may add, by the Bank of France also.

The transactions to which we allude are—

First. The withdrawal of a considerable sum in gold from this country by the Bank of Madrid for the purpose of being coined in Spain.

Secondly. The purchase of a large quantity of the silver by the Tasmanian by the Discount Bank of Paris for the purpose of being sent to China, partly to pay the French troops there, and partly for the purpose of establishing a branch of the Discount Bank at Shanghai.

It may be asked, how is this bullion paid for? The Bank of Madrid have been collecting, and so has the Discount Bank of Paris, bills on England, which have been transmitted here for discount, and the proceeds have been sent to Spain and France in the manner described.

The *Moniteur* publishes the usual monthly return of the Bank of France, which shows the following results as compared with the August return:—

INCREASE.	£
Bills discounted	1,160,000
Advances	93,333
Bank notes	35,000
DECREASE.	£
Cash in hand	2,840,000
Treasury balance	632,000
Current accounts	1,140,000

It is obvious, therefore, that the bullion in the Banks of England and France has diminished 4,000,000*l*, and, as we before observed, if this drain continue, both Banks will have to raise the rate of discount.

Money has during the week been in active demand, the great bulk of transactions being at 4 per cent. We may observe that it is very probable the French Government has and will require bullion for her troops in Rome, Syria, and China, and it is very probable more will leave this country; for the Bank of France, when bullion is required, purchases it even at a loss, and we believe the present operation of sending bullion from this country entails a loss of at least ¼ per cent.

Many are of opinion that the Bank of England ought immediately to raise the rate of discount, and it is not

improbable that the Bank will do so next week, should any bills of an exceptional nature present themselves; but we understand that the bills sent from Madrid are not of this nature, and there is no doubt England is indebted to Spain for grain to a considerable amount.

When we consider that large shipments of corn and cotton are coming forward from America, which will in all probability prevent the transmission of bullion from America to this country, it remains to be seen whether the supplies from Australia will be adequate to meet the demand for bullion which is evidently springing up on the Continent. If not, any withdrawal from the Bank of England will be met by an advance of the rate of disconnt, and thereupon it is probable that the rate money will advance rather than decline for the present. There has been an active demand for discount both in Lombard street and the Bank to-day at 4 per cent., and money in the Stock Exchange is 3½ to 4 per cent. on Government securities.

English Funds.—The English funds have receded fully ½ per cent. this week, the extreme prices for money having been 93⅜ and 92¾, and for November account 93½ and 93. The settlement of the account, which took place yesterday, has passed off satisfactorily; the rate of continuation from account to account has been 3-16 to ¼ per cent., or between 3 and 3¼ per cent. We believe that bankers would have continued large amounts of stock in the Stock Exchange from account to account at 3 per cent., but were not inclined to give more. There was evidently an increased amount of stock for the settlement of the account, and considerable amounts were borrowed of the Bank of England for a few days at 4 per cent. The dividends are payable to-morrow, which may give temporary ease; but it is very probable the Bank will have to make advances to the Government on deficiency bills, and if so, the dividends will not produce any material alteration. The books at the Bank are now open for the private transfer of Reduced and New 3 per Cents, which close 91½ ⅝; Exchequer bills, par to 3s pm. The last price of Consols is 92¾ ⅞ for money, and 93 to ⅛ for the November account. It must be borne in mind that the heaviness in Consols is in some degree attributable to the exchanges which have taken place from Consols to other securities bearing a higher rate of interest, under the provisions of the Act passed the last session.

Foreign Funds.—The transactions in foreign funds have been but limited. French 3 per Cents. have been as low as 68.50, and close this afternoon at 69.15. Sardinian and Spanish Bonds have been rather firm. Turkish Bonds have been comparatively steady, and in all others but little variation has occurred.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

	Consols, Money		Consols, Account		Exchequer Bills
	Lowest.	Highest.	Lowest.	Highest	
Saturday	93⅛	93⅜	93¼	93⅜	4s pm
Monday	93⅛	93⅜	93¼	93⅜	2s pm 5s pm

Railways.—The railway market has been remarkably well supported considering the depression in Consols. Midland stock has been done as high as 133; Lancashire and Yorkshire 119, but have since become flatter. There is evidently an active speculation for the rise going on in these stocks.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

Bullion.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes:—

Gold.—The arrivals since the date of our last circular (4th October) comprise only the City of Washington, from New York, with 3,000*l*, and the Norfolk, from Melbourne, with 141,000*l*. The specie per Asia, from New York, 42,000*l*, did not come to London, being probably on French account. The above amounts have been quite inadequate to fulfil the orders for export, and during the past three days about 600,000*l* in bar gold has been withdrawn from the Bank: the gold per Norfolk, which was deliverable this day, has also been sent away. The demand is still active, and any arrivals that may come to hand will also be taken for the Continent. The Tyne takes 9,800*l* to the Brazils, and the Ellora 6,000*l* to Bombay. The Orwell, with 151,500*l*, and the Red Jacket, with 152,000*l*, may be now considered as fully due from Australia, and the incoming mail will doubtless bring intelligence of other vessels having sailed with gold for England.

Silver.—The bar silver ex Tasmanian has been sold at 61½d per oz standard. The demand is not very active, and although we hear of 61¾d per oz having been obtained, it was but for a small amount, in time for shipment yesterday by the overland steamer, which vessel takes out 55,400*l* in silver, all of which is for Bombay. The Tyne takes 14,000*l* silver to the Brazils.

Mexican dollars.—The dollars ex Tasmanian were only delivered to the consignees yesterday. We quote the price at 62d per oz, but there is not much doing, nearly all the dollars on the market having been disposed of.

Exchange on India remains unaltered. Banks' 60 days' sight drafts on Bombay and Calcutta are 1s 11¾d to 2s. The same on Madras, 1s 11¾d. Bills with documents, 1s 11d to 1s 11¼d.

India Government loan notes are rather better. We quote 5 per Cents 96½, and 5½ per Cents 102½, but at these prices there are not many transactions.

Quotations for Bullion.—Gold—Bar gold, 77s 9¾d per oz std; bar gold, fine, 77s 9¾d per oz std; bar gold refinable, 77s 11d per oz std; Spanish doubloons, 76s 3d to 76s 6d per oz, last price; South American doubloons, 74s 6d per oz, last price; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1⅝d to 5s 1⅞d per oz std, last price; bar silver, containing 5 grs gold, 5s 1⅞d per oz std, last price; fine cake silver, 5s 6½d per oz, last price; Mexican dollars, 5s 1⅝d to 5s 2d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price.

Failures, &c.—At a meeting of the creditors of Messrs William Archer and Son, corn and flour factors, of Upper Thames street, Mr Coleman, of the firm of Coleman, Turquand, Youngs, and Co., accountants, submitted a statement by which it appeared that the liabilities amounted to 35,687*l* 8s 11d, assets to 14,918*l* 19s 11d. The estate showed a surplus in December, 1856, of about 10,300*l*, but the operations of the firm (which have included contracts with workhouses) since that period have resulted in extensive losses. Mr Archer entertained the idea very recently, however, that he was worth 30,000*l*. In the item of 34,925*l*, representing the amount due to creditors unsecured, is included 11,000*l* of accommodation bills between Mr Archer and Mr Nokes, of Essex. Bankruptcy proceedings have already been initiated by one of the creditors. The estate shows little more than 8s in the pound, and it was resolved to accept a composition of this amount, payable as follows:—2s 6d at once, 2s 6d in February, 1s 6d in April, and 1s 6d in June, the last to be secured.

The meeting of the creditors of Mr T. Nokes, miller and corn merchant, of West Thorrock Mills, Essex (the person above referred to), was also held. The balance sheet read by Mr Coleman, the accountant, states the liabilities at 18,051*l*, and the assets at 5,090*l*. It was resolved to accept 6s in the pound, payable in instalments extending over 12 months, the last to be secured.

In the Bankruptcy Court took place the first sitting for the proof of debts and choice of assignees in the case of Messrs Smith and Sinclair, linen factors. Mr M'Kewan, of the London and County Bank, was chosen assignee.

There was also an examination meeting under the second bankruptcy of Mr Frank Castelli, commission merchant, of Bury court, whose liabilities are estimated at 25,000*l*, whilst the assets are merely nominal. Losses to the extent of 13,343*l* have been incurred through speculations in the Stock Exchange. An adjournment was ordered until the 15th November.

Messrs Lambichi, Brothers, of Manchester, have stopped payment for 25,000*l*. The firm had been established 17 years.

At a meeting of creditors of Messrs Sofiano, Brothers, and Co., of Manchester, the liabilities were stated at 60,000*l*. Information from Constantinople and Persia being necessary to enable an estimate of the assets to be formed, a committee of three creditors was appointed to investigate and report.

Bill forgeries to the extent of about 1,000*l* have just been discovered. The name forged is that of Mr Clement Dresser, a respectable wool merchant, of Basinghall street.

It is reported from Havana that a president or director of one of the banking institutions at that port has recently absconded with 240,000*l*.

In the Bankruptcy Court, two petitions for winding up the General Discount Company (Limited) have been dismissed.

MISCELLANEOUS.—We understand that a sample bale of Australian cotton has been recently received in the London docks, the produce of the lands of Mr A. E. Hickey, which has been valued both by the brokers in Liverpool and by Mr Bazley, M.P., at 1s 6d per lb. Mr Hickey, who is the promoter and a director of a new Australian Cotton Company, has already produced a paper on the relative advantages of Australia as a cotton field, as compared with the United States, to which country he went expressly to inspect the cotton plantations. In this paper he maintains that Australia will, before many years are past, render England independent of the United States for her supplies of raw cotton.

There is a project afloat for the formation of a "London and Southwark Bank," but it seems to be as yet immature. The capital is fixed at one million sterling, and the idea is at present entertained of taking advantage of the Limited Liability Act.

Mr Haslewood has issued a circular to the holders of bonds of the Camden and Amoy Railroad and Delaware and Raritan Canal Companies, inviting them to extend the time of payment of their bonds, which fall due in 1864. The terms offered are as follows:—The present Five per Cent. Bonds to bear interest from 1st August last at the rate of 6 per cent. per annum, and to have a bonus of one per cent. in new Six per Cent. Bonds. The present Six per Cent. Bonds to have a bonus of 5 per cent. in new Six per Cent. Bonds. The holders of both descriptions will retain their present bonds (with new coupons), and consequently their present mortgage security. An accumulative sinking fund, at the rate of 3 per cent. per annum, to be applied half-yearly in the absorption of the new and extended bonds indiscriminately, and which will buy up the whole amount within 20 years. These bonds rank high amongst American railway securities, the dividends on them having been met with punctuality during a period of about six and twenty years. A high dividend is also paid on the ordinary stock of the Company. The railway referred to carries the traffic between New York and Philadelphia.

The whole of the debentures, viz., 200,000*l*, offered by the Government of the Cape of Good Hope have been tendered for and allotted at prices varying from par to 6 per cent. premium, with the exception of a few of the twenty years' bonds, for which there were not a sufficient number of applicants. The entire amount is to be paid into the Bank of England on the 15th inst.

Advices received from Alexandria mention that Mr Pasquali has resigned his office as one of the managers of the Bank of Egypt. This was in consequence of a request of the Board of Directors adopted after their investigations into the particulars of the recent financial dispute between the Bank and the late Il Hami Pasha. The entire circumstances connected with that dispute continued to attract much attention in mercantile circles, and active recriminations were passing between Messrs Oppenheim, the agents of the Pasha, and the officers of the Bank, which were likely to prove disagreeable to both parties.

With reference to the market for American securities, Mr E. F. Satterthwaite reports as follows:—

There continues to be an active market in London for American securities, especially for railroad stocks and bonds. Illinois shares advanced to 16 discount, but have declined to 19 discount. Options of 1861 come in for sale pretty freely at 4½ to 4¾. Erie shares had a sudden start to 43, but have given way again, closing 40¾ to 41¼. The demand for railroad bonds has extended to Illinois Central, Michigan Central, and New York Central; also to the various issues of Erie bonds.

At a general meeting of the shareholders of the Banque Genéral Suisse at Geneva, on the 24th ult., the accounts were approved and a dividend declared of 5f for each of the coupons due in the present year. The balance sheet showed assets amounting to 23,000,000f in investments, producing 1,200,000f per annum, irrespective of the profits by commissions, &c., and 14,000,000f in shares of the Bank, which the administration does not intend to put into circulation until they shall have again reached the price at which they were issued, and the recovery of business may afford an occasion for employing the proceeds. The Paris branch is now done away with.

The Portuguese financial agent, Senhor de Brito, has furnished a statement of the foreign debt of Portugal, on the 30th June last, as follows:—

	£	s	d

The half-yearly dividend on Bank stock in course of payment amounts to 727,650*l*.

Of the instalment of 25 per cent., which fell due on Wednesday, on the East Indian Railway Company's Debenture loan of 1,500,000*l*, hardly 50,000*l* remained to be met, the bulk having been paid in advance.

It is understood that, with the exception of a policy at the Phœnix Office, the renewal premiums on the fire insurance of the premises of Messrs Goodhart, the sugar refiners at Limehouse, which were destroyed on Wednesday evening last, had not been paid. The extra period of 15 days allowed by each office had, however, not expired. On the premium being tendered on Thursday morning the offices interested, with the exception of the Liverpool and London, refused to receive it. The question is thus raised,—what is the scope of the 15 days' privilege which the offices profess to give? According to general impressions, the result of a trial at law will be that it has a definite meaning, and that that meaning is that the offices are bound, under all circumstances, to recognise a continuance of their liability during that period.

A meeting of the combined Boards of the Thames and Mersey Marine Insurance Company was held at the London office on Wednesday, when it was decided that, in consequence

of the successful operations of the Company up to the present time, no further capital is required, and that the call of 2*l* which the prospectus stated would be made at the end of the year may be indefinitely postponed, any action on the question of an increase of capital being left to the general meeting in February, 1861.

An influential meeting of gentlemen interested in the welfare of India was held yesterday at the offices of the Agra and United Service Bank, for the purpose of considering the best preliminary steps to be taken to resist the attempted imposition of double income tax upon the enfaced Indian rupee paper. Mr R. W. Crawford, M.P., presided, and there were present several members of Parliament, General Pollock, Messrs Joseph Somes, John Griffith, and many other gentlemen identified with India. The object of the movement is to impress upon Government the impolicy and injustice of subjecting the holders to double tax. Stress was laid upon the tendency which the impost must have to check the beneficial flow of English capital to India, and to its probable evil effect upon the negotiation of future Indian loans, as well as upon the general credit of the Indian Government. The following resolution was unanimously adopted :—

That the gentlemen present form themselves into a committee with power to add to their number, for the purpose of ascertaining the legal position of the holders of the securities of the Government of India in reference to the income tax question, of collecting subscriptions towards the necessary expenses thereof, and of taking such steps as they may consider expedient for the protection of the interests concerned.

Amongst the members of the committee formed are Baron Rothschild (who, though not present, had signified his cordial support of the objects of the meeting), Mr R. W. Crawford, M.P., &c. Unless Government give way, the question will doubtless be taken up in Parliament at an early opportunity. We understand the first Cabinet Council is summoned for the 10th November, when doubtless this grave matter will be taken into consideration.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.15 per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is at about the same price in Paris and London.

By advices from Hamburg the price of gold is 424½ per mark, and the short exchange on London is 13.3⅞ per 1*l* sterling. Standard gold at the English Mint price is, therefore, rather more than 4-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is about 10⅜ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

There was a very poor show of English wheat at Mark lane today. The few good and useful samples on offer were disposed of somewhat steadily, at Monday's quotations; but damp qualities were very dull, at barely previous rates. For foreign wheat the inquiry was steady, at full currencies, although the supply was somewhat extensive. In some instances, barley was 1s per quarter dearer, with a good consumptive inquiry. Oats advanced 6d per quarter, and other produce supported Monday's prices. The imports, this week, have been liberal, viz, 21,360 quarters of wheat; 1,270 barley; 7,840 oats; 4,180 sacks and 15,080 barrels of flour.

At Liverpool, this morning, produce generally was in fair request, at full quotations.

The sales of the week in the Liverpool cotton market have again been pretty considerable, amounting to 92,000 bales, and include 53,000 bales to spinners, 21,000 to speculators, and 18,000 for export. Quotations for Surats are ⅛d to ¼d per lb dearer than on Friday last, as also all American descriptions below fair. To-day the market is firm and steady: sales, 12,000 bales at former prices. Speculators in Liverpool seem to imagine that the American crop will turn out a short one: this fact remains to be proved a little later in the season. The American markets do not speak for it just at present.

Advices from Bombay to the 11th ult. state that cotton was held at very full prices. The exports since the 1st of January to date were:—

	1860. bales.		1859. bales.
To Europe	345,134½	.....	444,482½
To China	171,623½	.....	118,936
Total	516,758	.....	563,418½
Showing a decrease of		.....	46,660½ bales.

"We have now fairly entered the maturing and picking season," write Messrs Neill and Co., of New York, "when the weather becomes of more than ordinary importance. Since the late rains, it has been generally favourable for the plant, and continued so up to latest dates, though in some few places a rather low temperature has prevailed. The rapid progress of the second growth is attracting close attention, and more sanguine views are entertained of its result. It is still dependent upon future weather and date of killing frost, which will determine the quantity of cotton to be gathered from it. In the meantime, the accounts from Georgia, Alabama, and Texas, where most of the damage was done, show a decided improvement upon those received a month ago. The date of killing frost last year was 29th October, and for the past three years has averaged about 10th November. Should the weather continue favourable up to that date this year, we should look for a material change in crop estimates from those now prevailing, while, on the other hand, bad weather would tend to confirm them. The crop is generally a fortnight earlier than last year, and by many parties this is considered equal to a fortnight's later frost."

The public sales of tea held this week have gone off slowly, and prices have been with difficulty supported. In the private market, the transactions have continued on a restricted scale.

IMPORT of TEA in London, from Jan. 1 to Oct. 1, 1860, and the STOCK on hand on Oct. 1, 1860, compared with the corresponding date in 1859.

Good and fine qualities of raw sugar have changed hands to a moderate extent on former terms; but low and damp parcels have met a dull inquiry at about previous rates. Refined goods have moved off slowly, and, in some instances, the currencies have had a drooping tendency. Letters from the Mauritius to the 6th ult., state that sugar had advanced in price, and that the total shipments in August amounted to 10,917,276 lbs, against 5,292,686 lbs. in the corresponding period in 1859; and 14,475,822 lbs in 1858. The comparison to the United Kingdom is as under:—

To United Kingdom:—	1858-59. lbs	1859-60. lbs	1860-61. lbs

	4,475,521	1,375,077	6,400,153

We have no change to notice in the value of any kind of coffee, for which there has been only a moderate inquiry. Cocoa supports late rates.

The rice market has become rather more active, and very full prices have been realised by the importers. Most kinds of fruit have sold on former terms; but the inquiry has been by no means active.

"We have to report another month of limited business in silk," observe Messrs Durant and Co., "and still more limited deliveries, without any present symptoms of improvement. The demand for manufactured goods is still very feeble, and the high prices of the raw material seem effectually to check any enterprise on the part of our manufacturers, and even foreigners move with great caution. In China silk, the second arrival of new silk was taken with even greater reluctance and hesitation than the first, although importers made no attempt to uphold prices, a concession of 6d per lb being readily made upon landing. The third arrival is now in course of unloading. In Chinese thrown silk the deliveries at last make some impression upon the stock, but this solely from the absence of arrivals—we cannot quote any improved demand. In Canton silk nothing new. Bengal silk continues to share the general quiet. In Italian, Brutia and Persian silk nothing. The next periodical public sales are fixed to commence on the 24th instant."

The public sales of indigo, comprising 13,285 chests, were commenced on Tuesday. They opened without animation; shipping qualities realised from par to 3d per lb advance upon July rates; the lower sorts were less in demand, and went at a decline of 3d to 4d per lb, and to close old parcels a further considerable discount was submitted to. Oudes also partook of the decline, the better sorts selling at about 4d per lb lower, but the ordinary and inferior had to be withdrawn, the biddings being so low; good and fine Kurpah realised about last sale, but the lower qualities declined 3d to 4d, and even more, to close old marks; only three chests of Madras passed to-day. Of the total quantity which has now passed the hammer (6,189 chests), 2,770 have been withdrawn, 906 bought in, leaving 2,513 chests sold.

Saltpetre, hemp, wool, and flax have maintained previous rates, but with only a moderate inquiry.

The Government have accepted tenders for 108,000 gallons of rum, at about 1s 8d to 1s 8½d proof. The market for that article is, therefore, steady, at full prices. Brandy is again dearer—parcels of 1859, in hogsheads, having realised 9s 10d per gallon.

Scotch pig iron may be considered steady, at 52s cash mixed numbers. Other metals have continued tolerably firm.

Linseed oil has become firm, at 30*l* 10s to 30*l* 15s. Tallow has advanced to 58s per cwt for P. Y. C. on the spot, notwithstanding the heavy shipments from St Petersburg.

"The money market," observes the New York *Shipping List* of the 26th ult., "retains the same steady and uniform features that have marked it throughout the month. The standard quotations for short loans are 6 to 7 per cent. We quote:—

	Per cent. per annum.
Loans on call, stock securities	6 to 7
Do. other good securities	6½ 7
Prime endorsed bills, 60 to 90 days	7 7½
Do. 4 to 6 months	7½ 8
First class single signatures	6½ 7½
Other good bills	9 9½
Names less known	10 10½

There continues a steady fair inquiry for most articles of domestic manufacture, and previous rates are sustained. Operations have been interfered with to some extent by the auction sales, which now constitute a leading feature in the market, and by which a great amount of goods are being run off, generally at prices which, though not so satisfactory as could be desired, are nevertheless more or less remunerative. The market is perhaps somewhat less buoyant than it has been during the past several weeks. Foreign goods remain steady, without especial variation in values."

MARKETS IN THE MANUFACTURING DISTRICTS.

At length, the demand for cotton and other goods for shipment to India has shown signs of improvement, and prices have been firmer than for some time past. The transactions for the Continent have been on a full average scale, the home trade continues remarkably healthy, and there is no increase in the stocks, notwithstanding the late heavy sales of cotton at Liverpool. The woollen trade is decidedly firm. In the iron districts, more firmness is apparent in the demand, at very full prices. Coals have further advanced, with a large export trade.

MANCHESTER, Oct. 11.—This week's market has been rather better than last, to the extent of ⅛d per lb in yarns, and occasionally 1½d per piece in cloths. In India qualities of mule, which have been for some time very languid and low as compared with other yarns, there has been this week a good deal done. In other yarns, especially those for China and the Continent, the fulness of orders is the main obstacle to other orders being placed, but a little continues to be done at very full rates. In cloths, shirtings still keep the lead, as respects the advancing tendency, and a large business would have again been done had not last week's rates been generally refused; for favourite makes these rates have been exceeded, and a fair amount done. T'cloths have been sold to some extent for Bombay and China. Other goods, though the demand is not large, show a decided bias in favour of the seller.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

LEEDS.—There is a firm tone in the market as regards prices, and the stocks of seasonable goods being moderate, the mills continue well employed.

HALIFAX.—There is no new feature of importance to notice in the condition of the textile manufactures in this town and district. Upon the whole, they continue rather quiet.

HUDDERSFIELD.—Our market has been quite as good as it has been any day for the last two or three weeks.

ROCHDALE.—Wool—We had a very quiet market, nevertheless the spinners are very firm as to prices. Flannel—The general tone of the market is hardly so good as a week ago. Business in Lancashire flannels is still good, and the makers of Yorkshire goods continue very busy.

BRADFORD.—The transactions in wool are exceedingly limited, buyers only supplying present wants. Prices are generally reported as quite firm. There is rather less disposition to operate in yarns. The manufacturers complain of the want of demand for their productions.

LEICESTER.—The hosiery trade is tolerably active for the time of the year, there being a fair amount of business doing in most branches, and future prospects are of an encouraging nature. In the hosiery districts of Loughborough and Hinckley, trade is very quiet. There is no material change in the price of yarns. Wools remain firm, at high currencies.

NOTTINGHAM.—The lace trade yet remains in a languid state; nearly every class of goods hangs heavily on hand, and although for the last month an improvement has been expected in the demand, none has yet taken place. Both the plain and fancy departments are quiet; a few orders have been received for plain stiff foundation nets, but for this class there is by no means an average amount of business doing. The silk lace trade continues extremely dull; stocks of all descriptions of goods are small. The hosiery trade is as dull as it has been for some months past. Numbers of the operatives are still out of employ. Yarns are without change in price. Silk dearer.

GLASGOW.—Business is a little quieter than it has been for some time past, owing to spinners having supplied themselves pretty extensively last week at the sales and by private contract. Prices remain unchanged.

BIRMINGHAM.—There was a good attendance of buyers at the wool sales, and the competition for all descriptions of fleece wool was animated, more particularly for bright haired clips. Fine tegs did not appear to command so much attention as they have done previously. The advances upon July sales may be considered fully 1d to 1½d per lb.

WOLVERHAMPTON.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Welch bars, 5*l* 7s 6d to 5*l* 10s. The nominal price of rails in Wales is 5*l* 5s. Current prices of pig iron:—Staffordshire cold blast, 4*l* 5s; best native hydrate pigs, 3*l* 10s to 3*l* 17s 6d; first-class all mine grey forge pigs, 3*l* 5s to 3*l* 10s; good mine pigs, with a modicum of fluc cinder, 2*l* 12s 6d to 2*l* 17s 6d; mine pigs, deteriorated by cinder, 2*l* 7s 6d to 2*l* 15s; Cleator Moor hæmatites, 3*l* 10s to 3*l* 11s 3d; Workington hæmatites, 3*l* 7s 6d to 3*l* 8s 9d; Kirkless Hall hæmatites, 3*l* 7s 6d to 3*l* 8s 9d; Barrow hæmatites, 3*l* 10s to 3*l* 11s 3d, none in the market; grey forge cinder pig iron, 2*l* 5s to 2*l* 10s; white forge cinder pigs, 2*l* 2s to 2*l* 7s 6d; melters, Nos. 1, 2, and 3, 2*l* 10s to 2*l* 15s; superior makes of all mine melting iron, 3*l* 2s 6d to 3*l* 15s, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l*; Northern hæmatites from 3*l* 7s 6d to 3*l* 11s 3d, according to brand and quality. The annual quarterly assemblies of the ironmasters of South Staffordshire and East Worcestershire have been held.

CORN

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Sept. 26.—FLOUR AND MEAL.—The tone of the market for State and Western flour during the first two days following our previous review was much the same as it was at that time, and a further reduction in prices, amounting to 5c to 10c per bbl, was conceded by holders, which, however, was in part recovered yesterday, at which time the demand was moderately active both for consumption and export, and the market became more buoyant, closing steadily at the improvement. The transactions are to a fair extent, comprising 56,000 bbls. Canada flour has met with moderate inquiry, and the sales are 1,500 bbls, including 600 bbls yesterday, at about previous rates. Southern flour has been in limited request, and a slight reduction was granted, without leading to important sales. The transactions for the three days aggregate 45,000 bbls.

EXPORT, from 1st to 25th September.

	1860 barrels		1859 barrels
Wheat Flour	189,185	.....	79,445

GRAIN.—The market for wheat, sympathising with that of flour, was considerably depressed on Saturday and Monday, when, to induce purchasers to operate more freely, holders granted a concession equal to 2c to 3c per bushel, at which a considerable quantity changed hands, both for export and local milling. The market opened with a more buoyant tone yesterday, and the above reduction was mostly recovered, the sales being moderately heavy at the improvement, which were largely for shipment. The sales during the past three days aggregate 450,000 bushels. The corn market remains steady, with a fair demand at prices not varying materially from the closing rates of Friday last; the sales comprise 190,000 bushels, including 51,000 yesterday, leaving off at 67c to 68c for yellow Southern, 66c to 67c for mixed ditto, and at unchanged rates for all other kinds. Rye has been in fair request, and 8,700 bushels have changed hands at 78c to 80c.

EXPORT, from 1st to 25th September.

	1860 bushels		1859 bushels
Wheat	1,460,064	.....	none
Corn	191,852	.....	12,775

NEW YORK, Sept. 29.—Flour depressed by heavy arrivals. Wheat 3c to 4c lower. Corn steady and better. Oats scarce.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND since September 1, 1860.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Notwithstanding that only limited supplies of English wheat have been on offer in the various markets held this week, the demand has ruled much less active. Fine dry samples, from their extreme scarcity, have realised full prices; but low and damp qualities have, in some instances, changed hands on easier terms. There has been much less doing in foreign wheat—the imports of which have, continued on a limited scale—nevertheless, the quotations have been well supported, no disposition having been shown on the part of importers to accept reduced currencies. Fine qualities of barley have moved off freely, at very full prices; and for other kinds the inquiry has continued steady. The malt trade may be considered healthy, at extreme rates. For oats the demand has been somewhat restricted. However, very little change has taken place in their value. Both beans and peas have commanded rather more money. The flour trade, owing chiefly to large importations from abroad, has been in a very inactive state, at barely previous rates.

Although the weather has been very changeable, some portion of the outstanding crops of wheat and other produce has been secured, but in, for the most part, poor condition. The accounts from most districts, in reference to the yield of the new wheats, are decidedly unfavourable.

In Ireland, there has been much less doing in wheat and other descriptions of produce; nevertheless, very little change has taken place in the quotations. For export to England, very little has been passing.

The Scotch markets have ruled firm for wheat, barley, and oats, at extreme rates. Other articles have moved off slowly, on former terms. Several rather large parcels of good saleable barley have been purchased for the South.

Throughout the Continent wheat has continued steady, at very full prices, whilst the demand for all spring corn has ruled somewhat active, chiefly on English account.

Our advices from the United States are to the effect that large quantities of all kinds of produce continued to change hands on English account. The supplies coming forward were very extensive, even for the time of year.

A very poor show of English wheat was exhibited at Mark lane to-day. The few fine samples on offer changed hands steadily, at very full prices; but inferior parcels were much neglected. Foreign wheat commanded full quotations; but the demand for it was by no means active. Barley and oats were rather dearer. Other produce ruled about stationary.

Mr Ed. Rainford reports the state of the floating trade as follows:—Up to last night 25 arrivals off coast since this day week are reported, consisting of 19 cargoes of wheat, 4 maize, 1 beans and 1 millet seed, viz.:—Wheat, 4 from Odessa, 6 Taganrog, 3 Alexandria, 1 Marianople, 3 Berdianski, 1 Trieste, 1 Constantinople; maize, 2 Sulina, 1 Ibraila, 1 Constantinople; beans, 1 Casabianca; millet seed, 1 Ibraila. Of the above, 7 cargoes were disposed of previously. Influenced by the weather and recent extensive purchases, the business in floating cargoes continues limited; the following transactions to the close of this day's market are reported since this day week:—Wheat, arrived, Berdianski, 2 cargoes at 59s and 58s 9d; Taganrog Ghirka, 1 at 55s (slightly imperfect) and 3 at 56s per 492 lbs, nearly all with more or less slight warmth; on passage, Taganrog Ghirka, 2 cargoes at 55s 9d per 492 lbs; Egyptian, 44s; Saide, 3 cargoes at 44s 6d, 1 at 44s 9d, and 1 cargo of Behara at 42s 6d, all per imperial quarter. Maize, arrived, Odessa (not perfect) at 37s per 492 lbs; Foxanian at 36s, 2 Ibraila at 36s, 1 Danubian at 35s 7½d, none quite perfect, and all per 480 lbs; on passage, Ibraila at 35s 9d per 480 lbs, supposed a resale. Barley, on passage, Ibraila at 28s 6d, and Taganrog at 29s 6d per 400 lbs.

The London averages announced this week are:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING

SUGAR.—The market has been freely supplied, but the greater par of the quantity brought forward in the public sales found buyers at last week's prices. There is, however, a less animated demand than noticed last Friday. Up to yesterday, 1,884 casks West India had sold, including the various parcels by auction. Barbadoes, bright yellow, 42s to 45s 6d; low to middling, 38s 6d to 41s 6d; brown, 37s to 39s; Jamaica, 38s to 43s 6d for dark brown to good yellow. The deliveries still exceed

those of the previous year, and the increase is now 12,600 tons. The stock on the 6th instant amounted to 73,550 tons, against 84,000 tons in 8859.

Mauritius.—Of 6,650 bags in the public sales, a considerable portion found buyers: black, 32s to 32s 6d; low to good brown, 33s to 37s 6d; grey and yellow, 38s to 41s 6d; grainy and crystallised, 41s to 45s 6d; grainy white, 46s 6d per cwt.

Bengal.—Of 5,035 bags brought forward on Tuesday, rather more than half sold. Cassipore, low and low middling yellow, 42s 6d to 43s 6d; Gurpatta date, 41s 6d to 45s per cwt.

Penang.—1,410 bags partly found purchasers: brown, 36s to 38s 6d; yellow, 40s to 44s per cwt for low middling to fine.

Madras.—6,150 bags chiefly sold: native, 32s to 35s 6d for brown and yellow, being about the previous value; grainy sorts ranged from 44s to 46s 6d per cwt.

Foreign.—The public sales, which have been of moderate extent, passed off without much animation at former rates. 550 casks 130 barrels Porto Rico chiefly sold: brown, 37s to 39s; grey to fine yellow, 39s 6d to 45s 6d. 13,900 bags clayed Manilla were withdrawn at 38s to 39s. 3,200 bags Siam chiefly found buyers: strong yellow, 43s to 45s; soft grey and yellow, 38s 6d to 42s 6d; brown, 29s 6d to 38s for low to good; white, 46s 6d. 150 casks Cuba went at 40s 6d to 44s. 2,082 boxes Havana were chiefly bought in at from 36s to 44s 6d for low brown to good yellow. Privately, 600 bags good white Siam have sold at 46s; and 4,000 bags clayed Manilla, 38s 6d. A floating cargo of Havana, No. 11½ to 12, has been sold at 27s 6d per cwt for Antwerp.

Refined.—There has been a very moderate business transacted, and the prices of last week barely maintained in some cases. Low goods may still be quoted 49s 6d; middling, 50s upwards. Dutch crushed is steady.

Molasses.—West India remains firm at the recent advance. Business has been done in Cossipore treacle at 18s 6d per cwt.

Rum.—There appears to be rather less inquiry, but the importers continue firm, and prices remain unaltered, viz., Demerara proof, 1s 10d to 2s 1d; Leewards, 1s 7½d to 1s 8d. Some good Bengal has realised 1s 7½d per gallon. The aggregate stock amounts to 29,600 puns 4,300 hhds, against 30,950 puns 6,850 hhds last year. It is stated that the Government have accepted tenders for 108,000 gallons of rum. Exact prices do not transpire, but said to be at about 1s 8d up to 1s 8⅝d per proof gallon.

Cocoa.—120 bags Trinidad in public sale went off steadily at the previous value, from 66s to 75s 6d for mixed grey to good red. Business to the extent of 120 bags is also reported privately. 102 bags Surinam by auction were withdrawn at 70s to 75s per cwt.

Coffee.—No further change in prices has occurred this week, and the market is steady. The various parcels of East India brought forward have sold, viz., 590 cases 1,005 bags: Neilgherry sorts, from 69s to 77s; Madras, 66s to 70s for palish Malabar kind to fine fine ordinary. 146 casks 110 barrels and bags plantation Ceylon realised 69s 6d to 73s for fine fine ordinary to middling. 435 bags palish Costa Rica, of indirect import, brought 66s to 66s 6d. 1,170 bags ordinary Rio partly sold at 58s to 59s 6d. 125 bags, "with all faults," 45s to 45s 6d. A floating cargo of Santos is reported at 60s per cwt for a near port, and one of good Rio at 61s for Copenhagen.

Tea.—New season's congous are taken rather slowly by the trade, and other kinds have been dull. On Tuesday, 12,760 packages were offered in the sales, when 5,100 packages sold steadily at about previous rates. The stock in the United Kingdom on the 1st inst. was 62,500,000 lbs, against 59,000,000 lbs at the same date last year.

Spices.—Few changes have occurred in the sales this week. Pimento has sold at previous rates: 329 bags brought 3⅜d to 3½d. 1,178 bags Penang pepper sold at 3⅛d for the sound portion. 300 bags Singapore, 4⅛d. 860 bags Alleppy, 4½d to 4⅝d per lb. Some inquiry has prevailed for Zanzibar cloves by private contract at 3⅝d; small sales also at 3¾d. 119 bags rough Bengal, with short prompt, sold at 25s. 190 cases Calicut ginger were sold at about former terms: common to good quality, 46s to 64s; low and wormy, 37s to 39s. 64 barrels Jamaica ginger went from 3*l* 1s to 6*l* 15s per cwt for ordinary to good bold.

Rice.—The market is very firm, although not active. Transactions to a moderate extent have taken place by private contract, including pinky Madras at 11s 4½d; Ballam, 11s to 11s 6d; white Bengal at 11s 6d to 14s 9d; and Arracan, 10s 3d to 10s 6d per cwt. Two floating cargoes of soft grain descriptions have sold at 11s 3d to 11s 6d per cwt.

Imports and Deliveries of Rice to October 6, with Stocks on hand.

	1860. tons		1859. tons		1858. tons		1857. tons
Imports	26650	...	22900	...	72600	...	55220
Deliveries for home use	48800	...	22100	...	28350	...	26150

Stock	42000	...	70700	...	89100	...	51050

Saltpetre.—A few small parcels of Bengal have been sold upon rather easier terms, and the market is quiet: refraction 13 to 9 brought 39s to 39s 3d; 4¼ to 3½, 43s to 43s 6d per cwt, according to the conditions.

Imports and Deliveries of Saltpetre to October 6, with Stocks on hand.

	1860. tons		1859. tons		1858. tons		1857. tons
Imported	10250	...	14340	...	7440	...	13950
Delivered	9900	...	13800	...	11100	...	9550
Stock	4200	...	3500	..	2500	...	6400

Cochineal.—585 bags about one-fourth part sold at previous rates for Honduras silvers, which went from 3s 1d to 3s 6d; dead grain, 2s 9d to 3s; low to fine black, 3s 4d to 4s 10d: Mexican chiefly bought in at 3s for silver, and 3s 4d for black: Teneriffe silver brought 3s 1d to 3s 2d; black, 3s 2d to 3s 5d per lb.

Shellac continues very high, fine orange being quoted 11*l* 17s 6d to 12*l* per cwt.

Other Dyestuffs.—Cutch is quiet at 26s to 27s. Business has been reported in Gambier at 17s 6d to 17s 9d, but the demand is not active. Turmeric remains dull. A few bales Bengal safflower, of the new crop, sold at comparatively steady rates: middling to good, 7*l* 12s 6d to 8*l* 2s 6d per cwt.

Drugs.—The public sales, yesterday, went off steadily, and former prices were generally maintained. 1,400 cases castor oil were sold, at barely former rates.

India Rubber is quiet, but firm.

Metals.—There have not been any changes of importance to notice in this market, which is quiet. Some descriptions of manufactured iron can still be obtained rather under the current quotations. Scotch pig iron is firmer at 52s 3d to 52s 6d per ton. No alteration can be noticed in copper. The spelter market has been firmer, and 20*l* 5s per ton may now be considered the value. Foreign tin remains dull: Straits, 131s to 131s 6d per cwt. No change is perceptible in lead, the market being inactive.

Hemp.—Russian is very firm: clean Petersburg, 29*l* to 29*l* 5s. Manilla has been in better demand: 453 bales offered by auction were taken in at 21*l* to 23*l* per ton.

Hides.—Of 102,000 East India, a fair proportion sold, at the previous value.

Jute.—The sales on Wednesday comprised 3,083 bales, which chiefly sold without animation at prices ranging from 13*l* 10s to 19*l* 10s per ton for common to fine marks.

Linseed.—The market continues very buoyant, and a further advance of 1s has been paid for East India: Calcutta, 56s 6d to 59s; Bombay, 60s. Large sales have been made for arrival: Calcutta, 55s 6d; Egyptian, 53s; Marianople and Berdianski, 56s to 56s 6d per quarter.

Spirits Turpentine meet with more inquiry. This morning American drawn may be quoted at 32s per cwt.

Oils.—The great feature of the week has been the rise in cocoa nut and palm oil, both influenced by the course of the tallow market, the former quoted 52s for Cochin; 50s for Ceylon, to arrive 49s; Cochin, 52s. Palm commands 46s 6d to 47s for fine. Linseed has experienced a better demand, at 30s 9d to 31s in all positions. Speculators at one period pressed sales, and quotations ruled rather easier. The market is now firm for rape; foreign refined, 45s to 46s; brown, 42s per cwt. Recent advanced rates are supported for sperm, but holders require 105*l*. Common fish oil remains steady. Olive has been quiet, at 55 to 60*l* per tun.

Tallow.—Speculators who have sold for forward delivery being compelled to buy in order to fulfil their contracts, and as the stock here is in strong hands, prices of foreign show an advance of 4s since last Friday. This morning first sort Petersburg Y.C. was quoted 58s 6d to 59s: for delivery in the first three months of 1861, 59s per cwt. Consumers do not buy at the existing rates.

Particulars of Tallow.—Monday, October 8.

POSTSCRIPT. Friday Evening.

Sugar.—The market was steady to-day. Barbadoes in public sale went off well at 38s to 43s; St Lucia, 36s to 41s 6d. 6,601 bags Mauritius partly sold at previous rates, and about half of 1,137 bags Bengal at 44s 6d to 45s for good grainy yellow. 1,834 bags native Madras, brown and yellow, 32s to 36s. The week's transactions in West India have been 3,000 hhds. 4,000 bags clayed Manilla sold privately at 38s 6d.

Coffee.—638 bags Costa Rica of indirect import were sold at 64s to 68s per cwt.

Cocoa.—230 bags Trinidad, 141 bags Surinam, and 47 bags Grenada were bought in above the value.

Rice.—644 bags Bengal were taken in at 15s per cwt for very good pearly white. 4,000 to 5,000 bags sold privately.

Cochineal sold on easier terms.

Safflower.—35 bales Bengal part sold at 5*l* 10s to 7*l* 17s 6d per cwt.

Oil.—206 casks Cochin cocoa-nut, by auction, to-day, sold at 51s to 54s 3d. 418 casks palm part sold from 42s to 47s per cwt.

Tallow.—Town, 61s; Y.C., 59s to 60s; being again higher, with an excited market.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very quiet this week, and declined about 6d for most descriptions of goods. There is very little demand for Dutch crushed. Some second-hand parcels of B & H No. 1 have been sold at 32s 3d, and of V O at 32s, all in barrels for immediate delivery.

Dry Fruit.—Only one arrival of new currants this week from Patras,—the Gulf by which has been sold at 30s, and the Zingos at 27s. The market has been quiet, but holders are firm. Clearances unusually large. Valentia arrivals keep out: price 32s, and very little stock to work with.

Green Fruit.—Market bare of all kinds. A parcel of oranges from Madeira, the first arrival, sold by Keeling and Hunt, brought fair prices, considering the indifferent quality. Lemons improved in value. More doing in Barcelona nuts, owing to the bad condition of walnuts this season. The shipments of the new crop black Spanish will not be as early as expected.

Seeds.—The supplies of all seeds have been good, and the market shows a decline for most varieties.

Flax unaltered.

Hemp very firm, and few sellers this week.

Cotton.—Sales of cotton wool from Friday, 5th October, to Thursday, 11th, inclusive:—2,300 bales Surat at 4d for fully fair Compta; 4⅜d to 4½d for middling fair to fair Dhollera; 5½d for good new sawginned; and 5¼d for a few very good new Broach; 1,100 bales Madras, 4½d to 5½d for middling to fully good fair Tinnivelly; and 4d for fully fair Western. The market continues firm, and a fair amount of business has been transacted at the extreme prices of last week. Yesterday, 350 bales Tinnivelly, mostly sea-damaged, were offered at public sale: the sound portion, which were middling fair, sold at 4½d to 4⅝d per lb, being about ⅛d advance on last week's transactions; the sea-damaged were sold at full prices. 100 bales fair Western Madras were also sold at public sale at

3¾d to 3⅞d per lb. 200 bales West India are advertised for public sale on Thursday, the 18th inst. P.S.—Market very firm: sales to-day, 200 Dhollera at 4⅛d per lb.

SILK.—There has been a fair business doing in China silk since our last; the cargo of the steamer then unloading being taken freely at a reduction of 6d to 1s per lb from the rates ruling on the first arrival of the new silk.

TOBACCO.—The market remains very firm and steady, and holders evince no desire to make sales, unless at extreme quotations. About 80 hhds have been taken for the navy.

LEATHER AND HIDES.—Since the publication of our last week's report the demand for leather has slightly improved, and sales to an average extent have been effected. Prices cannot be called firm, but our quotations of last week are generally supported. At Leadenhall, on Tuesday, the fresh supplies were not very large. Crop hides of best tannages met a fair demand, and good English butts, 20 lbs and upwards, found buyers. The public sales of raw goods last week consisted only of goat skins, which realised fully former rates. At that of this week there was a very limited demand for all articles. Of salted Cape hides, 1,800 were offered, 1,400 only sold; of 22,000 Australian, 8,500 only sold; of 98,000 East India, 56,000 sold; of 6,300 buffalo, 1,420 only sold,—showing clearly that the value of the raw goods is comparatively too high for the prices of leather. By private contract, about 4,500 River Plate hides have been sold, at 7½d for heavy, and 6¾d for light hides; and 2,400 Australian at 4¾d to 5⅜d—4½d to 4⅝d for seconds. Market hides remain at last week's reduced rates.

METALS.—A continuance of just enough business to keep prices unchanged for the worse is pretty nearly all that can be said of metals. Copper has not been sold to any extent either by the English makers or holders of foreign; but the prices of ores keep up fairly. Iron is unchanged, as regards manufactured; but Scotch pig has been gradually advancing—say 52s 6d cash—from a confidence in the beneficial results to come of the new French duties. Tin keeps steady. Spelter is again a trifle higher, some fair extent of business having been done. Lead is quiet, and rather favouring buyers. Tin plates unchanged.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	51	0
Fat by ditto	3	1½
Yellow Russian	60	6
Melted stuff	44	6
Rough ditto	27	6
Greaves	20	0
Good dregs	7	0

Imports this week 916 casks.

PROVISIONS.

Bacon is on the decline. In the face of a falling market buyers are very cautious, which to a great extent limits the trade. The scarcity of pigs preventing any rapid fall, we may expect, when this becomes more generally known, that purchases will be more freely made. Denny's best sizeable sold at 2s less than last week, making in most instances 72s f.o.b. Foreign butter very short this week. Friesland cleared out at 116s. Price at Harlingen 50 guilders.

METROPOLITAN CATTLE MARKET.

MONDAY, Oct. 8.—The total imports of foreign stock into London last week amounted to 8,743 head. In the corresponding week in 1859 we received 7,697; in 1858, 7,580; in 1857, 10,204; in 1856, 5,069; in 1855, 6,518; and in 1854, 8,002 head.

Fresh up from our own grazing districts, the receipts of beasts were not to say extensive, and the quality of most breeds was inferior. The few prime Scots, Shorthorns, &c., on offer were disposed of at an improvement in value of 2d per 8 lbs. Otherwise, the beef trade was dull, on former terms. With sheep we were but moderately supplied. Prime Downs and half-breds moved off steadily, and, in some instances, the currencies had an upward tendency—the best Downs having realised quite 5s 4d per 8 lbs: but inferior breeds were a slow inquiry, on former terms. Calves changed hands slowly, at last week's quotations.

SUPPLIES.

	Oct. 11, 1858.	Oct. 10, 1859.	Oct. 8, 1860.
Beasts	5726	4590	4540
Sheep	24330	23940	23500
Calves	141	126	77
Pigs	350	400	360

THURSDAY, Oct. 11.—Notwithstanding that the supply of beasts on offer in to-day's market was only moderate, the demands for all kinds ruled inactive, at Monday's quotations. The show of sheep was rather limited, and most breeds were in very middling condition; nevertheless, the mutton trade was in a sluggish state, at about stationary prices. The best old Downs sold at 5s 4d per 8 lbs. Calves—the supply of which was tolerably good—moved off slowly, at late rates.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	8	2	10	Prime Southdown sheep	5	2	5	4
Second quality ditto	3	0	3	4	Large coarse calves	4	0	4	6
Prime large oxen	3	6	4	6	Prime small ditto	4	8	5	0
Prime Scots, &c.	4	8	4	10	Large hogs	4	0	4	6
Coarse and inferior sheep	3	4	3	8	Small porkers	4	8	5	4
Second quality ditto	3	10	4	4	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	6	5	0	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 1,175; sheep and lambs, 6,872; calves, 350; pigs, 312.
Foreign supply—Beasts, 620; sheep, 1,200; calves, 220.

NEWGATE AND LEADENHALL.

FRIDAY, Oct. 12.—The supplies of each kind of meat are moderately good. Generally speaking, the demand is inactive, at our quotations:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	4	2	8	Mutton, inferior	3	0	3	6
Middling ditto	2	10	3	4	— middling	3	8	4	0
Prime large	3	6	3	10	— prime	4	2	4	4
Prime small	4	0	4	2	Large pork	4	4	5	0
Veal	4	0	4	6	Small pork	5	2	5	8

HOP MARKET.

BOROUGH, Monday, Oct. 8.—We have a fair supply of the new growth at market, the quality of which is, with few exceptions, very inferior. The trade rules slow, prices ranging from 10l to 28l. The demand for 1859's continues good, fine samples realising extreme values. The duty remains at 35,000l.

FRIDAY, Oct. 12.—There is a steady demand for consumption for the best grown new hops, at prices varying from 12l to 25l per cwt. Yearlings and good sound old hops are in fair request at firm prices. Duty, 35,000l.

POTATO MARKETS.

BOROUGH AND SPITALFIELDS, Monday, Oct. 8.—Since our last report about average supplies of potatoes have come to hand coastwise and by railway. On the whole the trade rules steady, as follows:—York Regents, 110s to 120s; Kent and Essex ditto, 90s to 130s; Scotch ditto, 100s to 120s per ton.

WATERSIDE, Thursday, Oct. 11.—Moderate supplies of home produce continue to come to hand at this market, and trade is dull, at the annexed quotations:—York Regents, from 100s to 120s; Kent and Essex ditto, from 90s to 130s; Scotch ditto, from 100s to 120s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2l 10s to 5l 15s; clover, 3l 10s to 6l 0s; and straw, 1l 10s to 1l 16s per load. A fair demand.

CUMBERLAND.—Meadow hay, 2l 12s to 5l 15s; clover, 3l 10s to 6l 0s; and straw, 1l 10s to 1l 18s per load. Trade steady.

WHITECHAPEL.—Meadow hay, 2l 10s to 5l 15s; clover, 3l 10s to 6l 6s; and straw, 1l 10s to 1l 16s per load. A slow trade.

COAL MARKET.

FRIDAY, Oct. 12.—Wall's-end Hetton 21s—South Hetton 21s—South Kelloe 20s 3d—Heugh Hall 20s—Harton 19s 3d—Woodhouse 18s 3d—Auckland Park 18s—Byron 19s 6d—Whitworth 16s—Holywell 16s 6d—Washington Hartley 15s 6d—Cragbead Steam 15s—St Cuthbert's Hartley 15s 3d—Tanfield Moor Butes 14s—Bebside Hartley 16s 9d—Davidson's Hartley 16s 9d—Hastings' Hartley 16s 9d—Howard's Hartley 16s 6d—Lambert's Hartley 16s 6d. 33 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 12.—A moderate amount of business has been done this week, chiefly for immediate consumption. Prices are without change.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 12.—Market steady, without much activity. Wheat dull, but not cheaper. Beans and Indian corn realising full prices; all other articles firm.

The Gazette.

TUESDAY, Oct. 9.

BANKRUPTS.

T. G. Wicks, Bedford row, Walworth, linendraper.
J. Skinner, Northampton, boot manufacturer.
B. W. Harker, Pentonville road, linendraper.
T. Griffin, Hampton terrace, Hampstead road, bookseller.
W. H. Vickers, Suffolk place, Lower road, Islington, butcher.
J. Thomas, Abingdon, builder, and Culham, brickmaker.

SCOTCH BANKRUPTS.

J. Thomson, merchant, Edinburgh.
H. Law, merchant, Glasgow.
J. G. Macfarlan, merchant, Glasgow.
T. Callender and Sons, leather factors, Glasgow.

HER MAJESTY'S THEATRE.—The grand coalition opera at Her Majesty's Theatre, which was to have inaugurated the season on Monday night with Mr Macfarren's "Robin Hood," a work intended especially for the occasion, began the campaign on Wednesday with Verdi's "Trovatore," in veritable Italian. The only novelty was Signor Briani, who made his first appearance in this country.

COMMERCIAL TIMES

Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, Friday Evening.

Add 5 per cent. to duties on pepper, tobacco, wines, and timber, deals, wood, &c., from British Possessions.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Sept. 29 amounted to 563,970*l*, and for the corresponding week of last year to 542,230*l*, showing an increase of 21,740*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 244,970*l*, and for the corresponding week of 1859 to 244,305*l*, showing an increase of 649*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Oct. 8.—British railway stocks opened buoyantly this morning and experienced a general advance, Midland, Lancashire and Yorkshire, and North-Eastern descriptions being the highest. Towards the close, however, a partial reaction took place, but the market still retained a very firm appearance. Compared with last Saturday, a rise of 1 per cent. was established in South-Western and North-Eastern, and of about ¼ in other stocks. In colonial descriptions, Great Western of Canada shares again advanced to 14½ to ¼, Grand Trunk stock remaining without change at 27 to ½. Foreign railways were dull. South Austrian and Lombardo-Venetian especially falling to ⅜ to ½ dis. Pernambuco closed at 3 to 2½ dis.; Bahia, ½ dis.; and San Paulo, ¾ dis. In American railway securities the shares of the Illinois Central and bonds and shares of the New York and Erie improved. Michigan Central and New York Central descriptions were likewise firmer. Mines were steady, at an occasional rise. Joint stock banks closed about the same as on Saturday. In miscellaneous descriptions the shares of the two discount companies were higher.

TUESDAY, Oct. 9.—The railway market to-day was heavy in sympathy with Consols. No material fall, however, took place, only a few of the leading stocks being quoted ¼ to ⅜ per cent. lower. Midland slightly improved. Indian and Canadian descriptions were more affected than British stocks, Grand Trunk of Canada especially receding to 26¾ to 27¼, and Great Western to 13⅝ to ¾. Foreign railways were likewise depressed. South Austrian and Lombardo-Venetian declined after official hours to 1 to ⅜ dis. Victor Emmanuel obligations, however, improved. In American railway securities a relapse took place in the shares of the New York and Erie and Illinois Central. Michigan Southern and Pennsylvania Central descriptions were firmer. No change of importance occurred in mines or joint stock banks. In the miscellaneous market, Madras Irrigation and Red Sea Telegraph shares declined. Victoria debentures, new, left off at 106½ to ¼ ex div.; Canadian Five per Cents., 103 to ¼.

WEDNESDAY, Oct. 10.—The railway market continued depressed by the fall in Consols, the anticipation of an efflux of bullion abroad, and in some cases by the realisations of bonâ fide holders in the late rapid rise. The market, however, remained intrinsically good, the floating supply of stock being moderate, owing to the recent withdrawals on borrowed money, while the expectation of increased dividends prevented any important sales. To-day several descriptions, especially North-Eastern, showed a reduction, although there was more steadiness at the close than at one period of the morning. Foreign descriptions were also flat, South Austrian and Lombardo-Venetian in particular, leaving off at 1 to ⅜ dis. In American railway securities the shares of the Illinois Central and New York Erie again receded. Mines were inactive, and in several cases lower. No change of importance occurred in joint stock banks or miscellaneous securities. Victoria debentures, new, were last quoted 106½ to ¼ ex div.; Canadian Five per Cents., 103 to ¼.

THURSDAY, Oct. 11.—The principal movement in the railway market to-day was another advance of 1¼ per cent. in Midland. South-Eastern was also ½ per cent. higher, and one or two other stocks ¼ to ½. The market generally was steady at the close. In the colonial market, Grand Trunk of Canada stock rallied to 26¾ to 27¼, while Great Western shares remained without alteration at 13⅜ to ¾. Foreign descriptions continued dull. South Austrian and Lombardo-Venetian, however, recovered to ⅜ to ⅝ dis. In American railway securities the shares of the Illinois Central and New York and Erie improved, but the bonds of the latter were heavy. Mines again showed a downward tendency. In joint stock banks there was a reduction in Bank of Egypt shares. No change of importance occurred in miscellaneous descriptions. Victoria debentures, new, were last quoted 105¾ to 106½; Canadian Five per Cents., 103 to ½.

FRIDAY, Oct. 12.—In the railway share market to-day the principal feature was a continuance of the extraordinary rise in Midland stock, the fresh advance established to-day being no less than 1½ per cent. There was also an advance of ¼ per cent. in London and North-Western and Eastern Counties stocks. Other descriptions were firm, at the closing quotations of yesterday.

SOYER'S SULTANA SAUCE Relish, Succulaste, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashee, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

A NEW MODE OF HARVESTING in Wet or Doubtful Weather, whereby Grain or Fodder can be secured for general purposes without removal from the fields, and with less expense than usually attends the same in fine weather. Thrashed grain can be dried in bulk with the same appliances without fire or solar heat.—Apply to the Patentee, JOHN ROBERTS, Upnor, Rochester, Kent.
Carpenters and Agricultural Implement Makers wanted as Agents in every Town in the Kingdom.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DR KAHN'S ANATOMICAL MUSEUM, opposite the Haymarket. Open Daily from Twelve to Five, and from Seven till Ten.
Programme of Lectures for October.
Three and Eight o'clock.—Ill effects of various avocations upon Health, with Pictorial Illustrations shown by the Oxyhydrogen Light and the Oxyhydrogen Microscope. Nine o'clock: Half-an-hour with the Mediums and Spirit Rappers, with numerous experiments.
Admission, One Shilling.
Dr Kahn's "Philosophy of Marriage," and his new work on "Women, specially considered in her relation to the Married State."
Published by Allen, 20 Warwick lane, price One Shilling each; or either sent free by post for 18 stamps direct from the Author.—Address, 17 Harley street, Cavendish square, W.

DR BUCHAN'S PATENT SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 22 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Hatler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 73 Gracechurch street Prout, 229 Strand, &c., &c.
Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

FREDERICK DENT, Chronometer, Watch, and Clock Maker to the Queen and Prince Consort, and maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange.

A BOON TO NERVOUS SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

ANOTHER CURE OF ASTHMATIC COUGH BY DR LOCOCK'S PULMONIC WAFERS.—From Mr J. Richardson, bookseller, Seaham, May 1, 1860. "Gentlemen,—Having for some time been troubled with asthma and cough, and not being able to get any medicine that would relieve me, I was recommended to try Dr Locock's Pulmonic Wafers, and before I had finished one box I was nearly well. Whenever I get a cold and return of cough I take some of the wafers, which give me immediate relief. I feel it my duty to let you know, hoping it may induce others who suffer from those complaints to give the waters a trial. A friend of mine, Captain Dinsdale, has used them with similar results.—I am, Gentlemen, yours, &c., T. B. BROWN." To singers and public speakers Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

Free for Six Stamps.
ENGLISH, FRENCH, AND AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
Mr CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.
Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

Just published, 71st thousand, price 1s, post free for 13 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.
DR LA'MERT ON SPERMATORRHŒA; an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.
CONTENTS.
SECTION I.—The Physiology of the Generative Organs.
SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.
SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.
SECTION V.—Spermatorrhœa, or Chronic Impotence: Its History, Causes, and Moral Consequences—The Sterility of Age.
Dr LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.
27 Bedford square, London.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double do 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER 228 Piccadilly, London

NO MORE PILLS OR ANY other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.
DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.
Certificate No. 36,418.—We find it the safest remedy Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurzer Dr Shorland; Dr Campbell.
We extract a few out of 56,000 cures:—
Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.
Similar testimonials from 56,000 patients who can be referred to.
The food is sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

HOLLOWAY'S OINTMENT and PILLS.—CHANGES of TEMPERATURE.—Rheumatism, neuralgia, sore throat, coughs and colds, constantly occur at the change of seasons. When treated in their early stages, they one and all give way before this cooling and purifying Ointment. To arrest the malady, relieve pain, and place the patient out of danger, nothing further is required than rubbing this Ointment very well upon the skin near the affected part. It will penetrate, reach, and rectify any organ which may be disordered, or whose functions may be indifferently performed. It is generally advisable to take Holloway's Pills while rubbing in the Ointment, as the one materially assists the other. No disease can long resist their conjoint curative powers.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month; for Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Mauritius, Reunion, King George's Sound, Melbourne, and Sydney by the steamers leaving Southampton on the 20th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

IMPERIAL AND ROYAL AUSTRIAN DANUBE STEAM NAVIGATION COMPANY OF VIENNA.

TABLE OF DEPARTURES FOR 1860.

From LINZ, in correspondence with the Bavarian steamers from RATISBON, daily, at 7 a.m.

From VIENNA to PRESBURG and PESTH, daily, at 6.30 a.m

From VIENNA to SEMLIN, BELGRADE, and intermediate stations, Sunday, Tuesday, Thursday, and Friday, at 6.30 a.m.

From VIENNA to ORSOVA, Tuesday and Friday, at 6.30 a.m.

From VIENNA to the Lower Danube, GALATZ, ODESSA, and CONSTANTINOPLE :—

BY EXPRESS BOAT.

From VIENNA, every Sunday, at 6 a.m.
From PESTH, every Monday, at 7 a.m.
From ORSOVA, every Wednesday morning.
Arrival at GIURGEVO, every Wednesday morning.
Arrival at GALATZ, every Wednesday morning.
Arrival at ODESSA, every Saturday noon.

BY ORDINARY BOAT.

From VIENNA, every Friday, at 6.30 a.m.
From PESTH, every Saturday, at 6 a.m.
From ORSOVA, every Monday morning.
Arrival at GALATZ, every Wednesday.
Arrival at ODESSA, every Saturday morning.
Arrival at CONSTANTINOPLE, the following Saturday at noon.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Chief cabin, 2l; fore, 1l 5s.

HARBURG—Every Sunday.

ROTTERDAM—Every Tuesday, Thursday, and Saturday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 35s 6d or 19s 9d.

ANTWERP, BRUSSELS, and the RHINE—The Moselle and Dolphin every Tuesday and Thursday, at 12 noon. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwarp for London every Sunday and Friday at noon.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. Oct. 13 at 12 noon; 17 at 2; 20 at 5. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday morning. Oct. 18 at 2. Chief cabin, 14s; fore, 10s. London to Paris, £1.

PARIS via CALAIS, direct—From London Bridge Wharf, every Wednesday and Saturday morning. Oct. 13 at 12 noon; 17 at 2; 20 at 5. Chief cabin, 14s; fore, 10s. London to Paris, 17s 3d.

BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. Oct. 14 at 12 noon; 16 at 1; 18 at 3; 19 at 4. Chief cabin, 14s; fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; return, 37s 6d: fore, 15s; return, 22s 6d; deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning Chief cabin, 6s 6d return, 10s; fore cabin, 4s; return, 6s

NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning. Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d.

YARMOUTH—From London Bridge Wharf, every Wednesday and Saturday, at Four afternoon. Saloon, 8s; return, 12s: fore cabin, 5s; return, 7s 6d.

MARGATE and RAMSGATE—From London Bridge Wharf, Tuesday, Thursday, and Saturday, at 10 morning; calling at Blackwall and Tilbury piers.

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

EUROPA, for BOSTON, Saturday, Oct. 20.
*PERSIA, for NEW YORK direct, Saturday, Oct. 27.
*Taking Passengers and Goods for Nassau and Havana, to be transferred at New York on board R.M.S.S. Karnak.
CANADA, for BOSTON, Saturday, Nov. 3.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, 8 Water street, Liverpool.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instruction on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd. It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-plug can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

THE FORTY-SEVEN SHILLING SUITS

ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

MODERATE PRICES WITH GENERAL EXCELLENCE.

E. MOSES AND SON can confidently assert that they possess advantages and facilities which are quite beyond the reach of any other House in the Trade, and are thereby enabled to offer a REALLY GOOD ARTICLE AT A VERY LOW PRICE. The most skilful Cutters are employed, and durability of material and workmanship may be relied on.

The BESPOKE TAILORING DEPARTMENT is almost daily replenished from the best Home and Foreign Markets.

The READY-MADE CLOTHING DEPARTMENTS are furnished with an immense assortment of goods for all classes, and all occupations.

The HOSIERY and DRAPERY, HAT and CAP, and BOOT and SHOE DEPARTMENTS, contain a carefully selected stock of the best and newest Manufactures.

N.B.—Should any article not be approved of, it will be exchanged, or the money returned.

Gratis on Application or Post Free.—E. MOSES and SON'S Book for the present Season, containing "The Growth of an Important Branch of British Industry," with rules for Self-measurement, and list of prices. Also (just published), an elaborate Plan of their City Premises.

Corner of MINORIES and ALDGATE, and NEW OXFORD STREET, Corner of HART STREET.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for WALKING, RIDING, TRAVELLING, and BUSINESS. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s. To be obtained of E. MOSES and SON,
Corner of MINORIES and ALDGATE, and NEW OXFORD STREET, Corner of HART STREET.
Also Bradford and Sheffield, Yorkshire.

TOURISTS AND EXCURSIONISTS are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c.,
Corner of MINORIES and ALDGATE, and NEW OXFORD STREET, Corner of HART STREET.
And Bradford and Sheffield, Yorkshire.

POMMERY'S CHAMPAGNE.—Extra Sorts Creaming and Sparkling.—Agents in London, A. Kniep and Co., 22 Basinghall street; Paris, 18 Boulevart des Italiens.

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	8t Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the table can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

HUNT'S APERIENT FAMILY PILLS.

Prepared by qualified Medical Men, and have now been in use with the Public for more than 50 years.

The testimonies to their salutary qualities have been most numerous and decisive. They require no confinement from ordinary business, and, indeed, exercise promotes their good effects.

As a mild and effectual remedy in those various forms of disordered health that are sure to occur occasionally with every one, and indicated by Pains in the Head and Limbs, Influenza, Disordered Stomach, Fever, Bilious Attacks, Indigestion, Heartburn, and the like, this Medicine has proved, to persons of all ages and both sexes, most convenient and timely, and a truly valuable means of warding off those attacks of sickness and disease that are the cause to individuals and families of so much sufferlog and expense.

Prepared by Messrs Hunt, 47 Pulteney street, Bath, and may be obtained at medical establishments throughout the kingdom at 1s 1½d a box, or at 2s 9d, which contains three boxes.

The Political Economist.

The Memoir of the Right Honourable James Wilson, which has been announced, will be published in a Supplement to the ECONOMIST *of the 17th November. Owing to the necessity of communicating with India, it has not been found possible to fix an earlier date.*

A VERY PECULIAR PHENOMENON IN THE MONEY MARKET AT PRESENT.

THE present state of the money market has one very remarkable peculiarity. There has been a drain—not a large, but still a perceptible drain—of bullion from the Bank of England for the purposes of exportation, and, nevertheless, it is certain gold cannot be exported at any profit from this country. Some persons who are entitled to judge say that gold might by very fine management be made to yield some small profit if sent from Paris to London. But be that as it may, there is a certain and indisputable loss on the contrary operation, the transmission of gold from London to Paris. Nevertheless, gold is exported from this country.

	£
On the 19th Sept. the bullion in the Bank of England was	15,869,083
On the 10th Oct., before the payment of the dividends ...	15,425,613
Loss of bullion	443,475

And by this week's account, which is however disturbed by the payment of the dividends, the bullion has been reduced 840,477*l*, making a total of 1,280,000*l* in a month. There is clearly an effectual demand for gold from abroad, although as a matter of profit and loss gold cannot be exported. Some anomalous influence, it would seem, is at work which prevents the customary operations of trade from being transacted in the usual manner.

It is said that the *Comptoir d'Escompte*, to whose proposed operations in China we drew attention a short time since, is investing the additional capital, which, as we explained, it was taking steps to raise, in the purchase of gold here, for the purpose of transmission to the East. But in this report there is a double error. *First*—The *Comptoir d'Escompte* would not want the gold in China. Silver is the only metallic money useful as currency in that part of the East, and, accordingly, the *Comptoir d'Escompte* is said to have sent thither Mexican dollars, a peculiarly good form of remittance. But be this as it may, gold in China would be substantially useless; and no exchange merchant would think of making a remittance of it to that country. *Secondly*—The *Comptoir d'Escompte* have not yet obtained their additional capital. The terms in which they advertised for it were these:—580f are to be paid per share, 500f as capital, 80f towards the reserve fund, and the payment is to be made at the following dates:—

f	£ s d		
180	(4 6 8)	on subscription,	that is, between the 10th and 20th of October, 1860.
100	(4 0 0)	—	between 10th and 20th November, 1860
100	(4 0 0)	—	between 10th and 20th December, 1860
100		—	between 10th and 20th January, 1861
100		—	between 10th and 20th February, 1861

And though discount at the rate charged by the Bank of France is allowed for prepayment, it is not likely that the *Comptoir d'Escompte* have obtained as yet the whole or nearly the whole of the capital which they are raising.

It is certain, nevertheless, that the *Comptoir d'Escompte* have obtained bills on England, and have made use of those bills to withdraw gold from the Bank of England. And two questions arise—first, how they obtain it? secondly, what they are going to do with it? And to these questions it is very difficult to give a perfectly certain reply. When anomalous influences are at work, the recognised maxims of trade do not apply, and it is always dangerous to speak with any confidence on details which are guided by no very fixed principle, and which are frequently concealed with care. Nevertheless, the belief of many well-informed persons is that the *Comptoir d'Escompte* are in some way agents only, and that (possibly for the sake of some loan in anticipation of the capital as yet unraised) they have undertaken to carry out the wishes of the Bank of France. Now, concerning the Bank of France, we know on the best evidence two facts. We know that of late it has lost bullion very rapidly. The last returns showed a decrease of 2,840,000*l*, which, as our well-informed Paris correspondent remarks, is very easily explained by the purchases of grain which France has made; by the payment of her troops which she is employing in the East, in Syria and in China; and also, though perhaps in a lesser degree, by the engagements which French capitalists have made for investment in foreign enterprises. But however intelligible the loss of bullion may be, its results remain. And this brings us to the second of our two facts. We know that when the Bank of France is in want of bullion, it sometimes will have it at any price. A very few years since it expended large sums in the purchase of gold when the exchanges were not favourable to France, and charged off the excess of premium—the loss out of pocket—openly and publicly. *It is believed* by many very competent persons that the Bank of France is beginning to pursue the same course, and is the real and ultimate agent in the anomalous exportation of gold which is now taking place. And it is certain that this explanation has great intrinsic plausibility, that it explains the facts to be explained, that it is the only theory which does explain them.

It is also stated that the Bank of Madrid has obtained large credits in this country, that it is using them to obtain gold from hence, and that in so doing it is but the agent of the Government, which is desirous of augmenting the Spanish currency. It is, we believe, certain that such credits have been obtained by the Bank of Madrid; but whether it is connected with any such French operation as has been above supposed, or whether the Spanish currency is really to be increased, or both, may not, perhaps, be absolutely certain. Though *if* there is any such anomalous operation in progress

as we have described, it is difficult to imagine that the peculiar and sudden demand for gold from Madrid is a purely unconnected and contemporaneous accident.

Such a drain, however, certainly exists, and it is for us to settle how it will best be met. This question was in substance discussed before the Bank Court on Thursday, and must be admitted to be a rather difficult one. In favour of *not* raising the rate of interest—the decision ultimately arrived at—it may be said that the cause of the drain of bullion may be temporary. Temporary causes are publicly assigned for it. Whether correct or incorrect, we will not say;—*possibly* correct. If the drain should be really a casual one, it would be an error to annoy commerce by a needless fluctuation. Nor, it may be said, was there any occasion to raise the rate of interest. We are now dearer than the most important parts of the Continent. The following table shows the relative rates:—

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3½	3
Hamburg	No Bank rate	2½
Brussels	3	3
Frankfort	2	1½
London	4	3⅝
St Petersburg	5	5½
Vienna	5½	5½

And the position of the Bank of England is, considering the whole of the circumstances, not so bad. Taking the Banking Department by itself, we have—

	£
Public deposits	6,583,944
Other deposits	12,813,771
Total liabilities	19,397,715
Against a reserve of	7,275,611

On the 19th September, it is true, the reserve was 9,997,258*l*; but then—

	£
The public deposits were	6,965,466
Private deposits were	13,179,934
	20,145,400

Though the reserve is diminished, the liabilities are less also. Would it be wise, it may be asked, while we hold so large a proportion of the liabilities of the Banking Department in actual cash, to change the course of commerce by a change in the rate of interest?

On the other side, in favour of raising the rate, it may be said that it is the duty of the Bank to watch early over the beginnings of a movement in the precious metals which *may* be permanent. The amount of bullion and the reserve of notes are undeniably reduced; and, on the whole, it is better and easier to attend to the early indications than to the later disasters of a drain of bullion. If such temporary arguments which have reference exclusively to a single phenomenon of the present moment were the only ones which could be advanced on the subject, we might perhaps be in some doubt which side of the scale preponderated. We might scarcely have an opinion on the subject. But there are some permanent circumstances which should engage our attention.

First. As the Bank of France is losing bullion apparently while we are losing it also, there is a strong presumption that the sums so abstracted may not return very quickly but will be distributed through some, in comparison, distant, countries.

Secondly. The deficient harvest, both here and in France, must tend to cause an export of bullion from both countries for some time. This tendency may certainly be counteracted in some measure by the additional purchases of our manufactures, which the good harvests of foreign nations may enable them to make. Still, it is only reasonable and prudent to anticipate the probability of *some* drain.

Lastly. The exchanges from America are not such as to give any profit on the importation of gold from thence, while—though this is of less momentary importance—the yield of the Australian mines is not quite so prolific as it was last year.

Taking these more permanent circumstances into the account, we are disposed to regret that the Directors of the Bank of England did not raise their rate of interest on Thursday last, and to anticipate rather confidently that they must before long take that step.

VICTOR EMANUEL'S PROCLAMATION.

The bold and frank manifesto of the King of Sardinia, which has this week been given to the public, is in every way worthy of the occasion, the cause, and the man. It bears the stamp of the Minister who drew it up, and is instinct in every line with the mingled courage, ingenuity, caution, and persistent deliberate policy, which, in their singular combination, have made Cavour, if not precisely the statesman we must without reserve honour and admire, at least and pre-eminently the exact sort of statesman wanted for the crisis and the country. This document is at once a "Proclamation to the People of Southern Italy," and an official representation addressed to the Powers of Europe, explaining the reasons why Victor Emanuel should do what he has done, and why in truth under the circumstances he could not have done otherwise. It takes up the "situation" very much on the principles on which we argued it last week; and it is especially remarkable as coming from the "Foreign Office" of an established and long-descended Potentate; inasmuch as it addresses itself rather to the universally intelligible sentiments of common sense and common feeling, and to the actual facts of the case, than to those formal rules and legal fictions to which State Papers usually confine themselves; and inasmuch, also, as it speaks the language less of Diplomacy than of human nature. Half its pleas would be overruled in a Court of Law: nearly all of them would be admitted as unanswerable in a Court of Equity. Now, in discussing the welfare of nations and the peace of Europe, whatever timid and pedantic formalists may say, we *must* appeal rather to Equity than to Law. We must deal rather with principles than with rules. It is impossible to argue the rights and interests of a whole *people* like a case at *nisi-prius* of the value of five pounds.

The real facts to be dealt with may be stated in a very few words;—and those words need contain no allusion to any questionable doctrines as to "Nationalities" or "Patriotic claims." Ever since the miscalled "Settlement" of 1815—which was no settlement at all, but a mere congeries of ill-assorted unions and immoral severances,—dividing those who wished to be united, and forcibly chaining together those whom it was impossible to amalgamate or fuse—gifts, where the donor had no property, seizures, where the robber had no right,—ever since that ill-omened arrangement, Italy has been the perpetual apple of discord, the one fermenting element which rendered peace impossible in Europe. And it has been so, precisely because neither justice nor regard for natural and unconquerable feelings presided over the partition which was then made of its several Provinces. Naples, after having enjoyed some taste of freedom, dignity, and tolerably good administration under the reigns of Joseph and Murat, was forcibly handed back to Ferdinand of Sicily, who had long made himself hated for his brutalities and imbecilities. The Roman States, also, after a breathing-time of comparative emancipation from Priestly misrule, were replaced under the old subjection, which never seems so hateful as when there has been some alien experience wherewith to contrast it. The minor Princes returned to their Duchies, and were more or less cordially welcomed back. Lombardy reverted to Austria, with the unwarrantable addition of Venice. This was the greatest offence against both policy and decency embraced in the whole series of arrangements; for Venice had been a free autonomy till 1795, and traced back her separate existence—often glorious and always independent—for more centuries than any other European State. Her people, especially her aristocracy, fallen as they were and possibly degenerate, were yet proud of their history, their country, and their race; and the transference of them, like an estate with the live-stock upon it, to a nation which they hated as alien and despised as semi-barbarous, was treatment not to be endured,—treatment which has rankled in their bosoms for the last forty years, and the irritation created by which has broken out in every form of manifestation, spirited or silly, and on every occasion, with or without prospect of success.

Now, we do not go so far as to say that great political crimes never go unpunished; but assuredly those where folly mingles with the sin seldom escape a speedy and appropriate retribution. The result of the wrongs which Italy suffered

in 1815 at the hands of the Great Powers who then disposed of the destinies of Europe, has been that Europe has been slumbering on a volcano ever since; that those Great Powers have seldom been long or thoroughly at amity or at ease; and that Italian politics have usually, directly or indirectly, furnished the occasion of their chronic unrest and their recurring misunderstandings. Under cover of suppressing disturbances between the Princes and their subjects, Austria gradually contrived to extend a paramount influence over the whole Peninsula—an influence which gave great umbrage to France, and was by no means a source of satisfaction to Great Britain. Then the King of Naples had to be warned and even menaced; and conferences had to be held to try to keep the Pope in order. Insurrection after insurrection, more or less local, more or less formidable, was constantly breaking out, giving ample warning that the existing arrangements were untenable because unnatural. A rising in Italy was always looked for, and always followed, upon any decided movement in the cause of freedom in other parts of Europe. The French Revolution of 1830 seriously menaced—the French Revolution of 1848 entirely overthrew—the Italian arrangements. At length things had reached such a pass, that the King of Naples only held his throne through Austrian and Russian support. France occupied and governed half the States of the Church, and Austria the other half. The people, in suppressed but very intelligible tones, were calling out for freedom throughout the whole Peninsula; while the only free State existing there was daily made aware how detested and how precarious was its life.

Europe and England began openly to sympathise; but were not prepared to do more than remonstrate and entreat. Repeated efforts and repeated failures had made it plain that insurrection *alone* could never free Italy or compel decent government from her oppressors;—and that Austria was the cause. Patriots and insurgents could conquer or coerce their own Rulers; but against a great military Power like Austria they were inevitably powerless unless backed and led by foreign aid. The celebrated pamphlet *Napoléon III. et l'Italie* placed this truth in a blaze of light. Cavour at length—finding Sardinia herself in danger, and harassed by incessant calls for aid from his suffering fellow-subjects in other parts of Italy—contrived to purchase this indispensable foreign assistance. Of the price he paid for it we will here say nothing—perhaps for so necessary a means to so great an end, no price short of virtue and truth could be too high. But the process by which he secured it was unquestionably very masterly, and showed both policy and daring of no common order. Sardinia was poor, feeble, and in peril. To gain for her safety, position, and aggrandisement, he increased her burdens and mortgaged her means in order that she might do, what Austria would *not* do—fight side by side with France and England in the Crimea, and so earn a right to sit side by side with them in the subsequent Congress at Paris. How well she did both her fighting and her diplomacy we all know now. The great stroke was inducing—mainly through the countenance and support of Napoleon III.—the Congress to permit her to bring before them in a special memorial the wrongs of Italy. This at once gained three cardinal points:—it established her as the virtual and recognised, if not rightful, representative of Italian claims;—it brought Italy and Italian concerns *as a whole*, before the assembled delegates of Europe, and thus made "Italy" thenceforth something more than "a geographical expression";—and it committed both France and England to at least some avowed interest in the well-being and good government of the various States of the Peninsula.

What followed is in everybody's memory. The instant that by the armed intervention of France the incubus of Austria was removed, the unanimous wants and aspirations of the several sections of the Italian people broke forth into language that could not be mistaken or put down. The strength and consentaneous nature of the movement showed how terrible and how iniquitous must have been the pressure. What has been done thus carries with it its own most unanswerable justification. The proved universal hatred of Austria is the justification of France's assistance in expelling Austria. The unanimous desire of Romagna and the Duchies to be annexed to Piedmont is the justification of the King of Piedmont for having so long and so boldly spoken on their behalf, and for now accepting their allegiance. The rapid and brilliant triumph of Garibaldi, constitutes Garibaldi's sufficient justification for his daring enterprise. If the King of Naples had not *morally* forfeited his throne, he could not have *practically* lost it in so prompt and ignominious a fashion. The easy and almost universal desertion of Francis by his people, his army, and his fleet, is Victor Emanuel's defence against those who blame him for ascending, or at least engaging to ascend, the all but abdicated throne. Perhaps an even more decisive justification may be found in a consideration of what would be the certain and inevitable consequences, if he hesitated or declined to take this decided step:—Revolutionary movements, republican intrigues, and such anarchy as would necessitate and warrant foreign intervention:—intervention which could not fail to bring about political complications in comparison with which the difficulties of the actual solution are as nothing.

All that is now needed is that Victor Emanuel should show as much patience as he has shown spirit; that he should complete his present work before allowing himself to undertake another; that the Italians who are already free shall consolidate their union and develop their military strength before dreaming of a further extension of their kingdom; and that the Italians who are still enslaved and oppressed shall wait, however difficult may be the task, till *their* hour also shall arrive; and shall not for want of a little more patience and a little longer endurance, mar or risk a victory which, even in its imperfect condition, is immeasurably wider and more thorough than three years ago the most sanguine among them would have ventured to anticipate. Venice and Rome *must* soon be free and united to their brethren, if only Venice and Rome do not show themselves at this critical conjuncture wanting in one of the first qualifications of a people aspiring to liberty and self-rule.

THE DRIFT OF OUR CHINESE POLICY.

The more we hear of the progress of events in China, the more confident we feel of the conclusion which we stated in these columns many months ago, that we shall have to choose between a complete change of policy, and a career of territorial encroachments such as that which has founded our Empire in India. This is a tremendous alternative, but it scarcely requires more than the most ordinary sagacity to see that it is fast becoming the only practical alternative for England. Even the *Times*, which has been by far the most powerful advocate of the aggressive policy, is forced to admit that all the fatal consequences to the central authority of the Chinese Empire which were predicted as likely to result from an attack on Pekin by the Western Powers are now actually ensuing, and that, in fact, the fruit of our expedition must be the imposition upon us of all kinds of new responsibilities, both in relation to the Emperor of China and to his rebellious subjects.

On the one hand, the duty of defending Shanghai, which has been already attacked, and the other coast towns where British commerce is concentrated, against the victorious rebels, is impressed upon us by the *Times*;—on the other, it is admitted that our invasion has just given the impulse which has turned the scale against the Chinese Government, and that but for us the revolutionary forces might not have gained head. We are now, then, placed under the double obligation of defending ourselves against the Emperor's enemies, and overpowering the Emperor himself. In what can this end, except some assumption of power on the part of England and France to put an arbitrary termination to the civil war in China as being inconsistent with our foreign trade? Nor can it terminate in any other way unless the whole policy recently pursued by England in China be reversed.

Let us look at this matter a little more minutely. When the Emperor of China is defeated—if defeated he is—before Pekin by the united forces of England and France, it will be easy enough, no doubt, to extract from him promises of compensation, and any treaty almost that we may wish to dictate. But it will not be then nearly so material to consider what the Emperor will give if he can, as what he will be *able* to give. Even now, as we see, the Tae-Ping rebels are carrying all before them, and in the flush of victory dare even to attack a town occupied by the European expedition. When we have played their game for them by dispersing the

most powerful Tartar army which the Empire in its despair can command, the question will arise whether it is of any use to make terms with a fallen Power, unless we also agree to set it up again and support it against the formidable civil foe who now threatens it. If we do not do so, we must—not only sacrifice the results of our victory,—but get into a much worse difficulty than that from which our victory would extricate us. For if, after annihilating the prestige and dispersing the forces of the Imperial Government, we withdraw from the scene and leave room for the Tae-Ping rebels to make their way, the bargain we have forced on the legitimate authority will certainly not be respected by the revolutionary party, and we shall have all our work to do again. Nay, probably enough, more than all. For the sense of danger impending from the rebels has no doubt done much to render the Court far more pliant to foreign pressure during the last eight years, than a successful revolutionary party driving the Emperor from the throne would be at all likely to be. Accordingly, if we prostrate the Imperial Power, and then neglect to support it when thus humiliated, the great probability is that we shall find ourselves in a far worse position than before,—dealing with a Government less tractable, less civilised, less intelligent, less able to appreciate the advantages of foreign commerce, and probably of much stronger and coarser material than the one we have overthrown. We shall have to repeat all our efforts at a greater cost than before, and have the satisfaction of thinking we are fighting with a Government which would never have succeeded to power at all without our aid.

If, on the other hand, we are induced to support the Court of Pekin, as soon as we have humiliated it, against the rebellious army that was threatening Shanghai when the last mail left, we may avoid the difficulties we have indicated, but shall inevitably fall into others quite as serious. We shall then make our aid necessary to the present Government of China, just as within the last century we have made our aid necessary to the various native Governments of Hindostan, to the Nabob of Arcot, the Soubahdar of Bengal, and more recently to the Great Mogul himself, the Nabob of Oude, and almost all the minor independent States of of India. This has been invariably the first step. Our assistance has been lent to, and afterwards relied upon by, the weak Oriental Governments which did not see any other chance of support so firm or durable; and then, we have gradually discovered that we were supporting a Government so corrupt, so cruel, so hopelessly degraded, that our support was itself a crime. Remonstrances have followed,—remonstrances sustained by threats. But it has never been feasible to withdraw. Once established as a recognised Power in an Oriental country, our advice has been appealed to, our aid solicited, pledges of faith given on small points in so many directions, that it has appeared a wanton and retrograde act to abandon the natives to the anarchy from which we rescued them, and the only alternative has been *annexation*. We could not support by our troops weak and wicked Princes in systematic political abominations,—such as those of Oude under its late Government for example. We could not reform them, do what we would. We could not desert them without letting in the floods of absolute anarchy; and so we have taken the Government into our own hands and ruled them for ourselves.

And this is the absolutely certain and necessary end of a policy of intervention on behalf of any one party in an Oriental State that is divided into factions. Thus it must be in China, if we ever undertake to make the Imperial Government dependent on our assistance against its enemies. By little and little that assistance will become necessary to it; we shall be continually told that there is no hope of avoiding disaster and overthrow, except by granting our aid; and the more military help is granted, the more it will be wanted. Before long our representatives in China will become the referees in all serious internal discords, because the aid of our troops will be the only certain salvation. From this point, the step to territorial encroachment is scarcely discernible. Before we know it, we shall have a Government in China as well as in India, and the nation which has found the civilisation of Hindostan far too much for even its great energies, will be encumbered and drained by the pressure of another gigantic Eastern difficulty of a still deeper and more unmanageable kind.

It seems to us, therefore, that the policy on which we are now fairly embarked in China can lead to no good result. We have either done far too much already, or we are quite blind to the magnitude of what we are about. If it was our object to keep our relations with China as distant as is consistent with friendly commercial relations, we ought to have endured much rather than embarrass and paralyse the Central Government. If, on the other hand, it is our object to spare no pains to open up the country to European enterprise, then nothing short of our present attitude would have been efficient; but then, also, we cannot stop here. We must be prepared to take every step that is needful to maintain and deepen the impression we have made,—to win and keep a constant influence over the regular action of the Government. Nor can we do this in any divided Oriental country, full of misgovernment and the result of misgovernment—revolution, without being prepared sooner or later to accept the trust of a protecting Power, and the duty of constant tutelage. If there be any Englishman who thinks that in India we have not got enough and more than enough of this kind upon our hands, he may look without alarm to the present drift of our policy in China. But all who,—with the majority of the nation,—believe that the Government of India is a problem which tasks our resources to the utmost, if it is not quite beyond them,—must look with something like dismay on the present posture of Chinese affairs,—on the conjunction of circumstances which is at once making us a powerful instrument in the hands of the Tae-Ping rebels, and also bringing us, at another point, into collision with those rebels;—and into a kind of collision which shows us significantly enough that they will not be disposed to give us less, and probably far more trouble, than the Government which it is their ambition to displace.

THE TRUE WISDOM OF ROMAN CATHOLICS IN THEIR ITALIAN POLICY.

DR CULLEN AND COUNT CAVOUR.

We feel no desire to trample on the fallen. The Ultramontane politicians have been checkmated with the defeat of Lamoricière: and Dr Cullen's remarkable oration on Wednesday last, in which all the moral lights are turned into shadows and all the shadows into lights, can excite no emotion but pity in the mind of any thoughtful reader. His profound conviction that the Emperor of Austria is the special favourite of Heaven,—that, the King of Naples and the secular authority of the Pope are under a temporary cloud which is in reality "big with blessings" to them, and with vengeance to Victor Emanuel and Lord Palmerston and Louis Napoleon, is almost pathetic,—like the consumptive patient's anticipations of health and activity. With such monomania we would not meddle. But for all thoughtful Catholics there is a curious point of agreement between the testimony of opponents so inveterate as Dr Cullen and Count Cavour, which we would ask them to ponder carefully, as full of the most significant suggestion.

It has never been a charge against Roman Catholics that they are wanting in the power to adapt themselves to circumstances where they find that circumstances will not adapt themselves to them. The "wisdom of the serpent" has always been the wisdom of pliancy,—and of this the Church of Rome has generally had, and boasted to have, a sufficient share. Now, if ever, a great occasion has come for its exercise. If Rome is to retain its religious power over Italy,—possibly to gain far greater power than it has possessed for a very long period,—she must frankly accept the popular will of the Italians in political matters instead of resisting it. That in this case there is a great career still before her, Dr Cullen and Count Cavour (whom Dr Cullen probably regards as an evil spirit who believes and trembles to believe) are entirely agreed. "Even Italy," says Dr Cullen, "in the "midst of the convulsions, and the perfidious acts to which "she is abandoned, has still a great Catholic spirit; and I "read some days ago, with great pleasure, a letter from the "exiled Cardinal Archbishop of Pisa, bearing ample testi- "mony to the wonderful faith and good works of the people "of Turin, whilst the inhabitants of Pisa itself displayed "dispositions equally praiseworthy, when they received in "triumph, and with ecstacies of delight, the same venerable "Archbishop, who had been freed from captivity. Such

"things show that the faith is still strong in the Italian "heart. Undoubtedly there are wicked and perfidious men "beyond the Alps; but, in my opinion, though violent and "daring, they are not very numerous, and if compared with "the true Catholics as to numbers, they are not more in pro- "portion than the Orangemen in Ireland, who, though only a "handful, have been able to disturb for so long a period, "and to trample on the peaceful inhabitants of this country." And Count Cavour echoes in still more remarkable language the testimony of Dr Cullen. Indeed, we hear from all sides, from quarters where Italian patriotism is keener and more fervent than in any other, that Roman Catholic piety appears for the time to rally most where the popular spirit is most triumphant. "I do not hesitate to affirm, gentlemen," says Count Cavour, "that the free Government established "in these Sub-Alpine countries for the last twelve years is "greatly favourable to the development of religious feelings. "I think I have the right to declare that there is at the pre- "sent day a more lively and sincere religion in Piedmont "than there was twelve years ago ('true, true'). The "clergy may have less privileges, the monks may have dimi- "nished in number, but true religion has more control over "the minds and souls of our people than at the time when, flat- "tery offered to a certain hierarchy of the clergy, and the hypo- "critical practice of going to church led men to public offices "and honours (applause). Those among you who do not be- "long to this part of Italy may upon quitting this hall re- "cognise the truth of my assertions. You may have the "confirmation from all the venerable pastors of this capital, "although this diocese has not an enlightened prelate at its "head, as fell to the lot of other cities, where the bishops "well knew how to reconcile the precepts of freedom with the "canons of religion (applause). When this opinion shall "generally prevail, as it soon will (since the conduct of "our army, the behaviour of our high-souled Sovereign will "have a tendency to confirm it), when it shall take root in "the minds of other nations, in the heart of modern socie- "ties, we feel assured that the great majority of enlightened "and sincere Catholics will acknowledge that the august "Pontiff who is at the head of our religion may exercise "his office in a far more free and independent manner if he "be guarded by the love and affection of 22,000,000 of "Italians, than defended by 25,000 foreign bayonets."

Now cannot the Catholics learn a lesson of true wisdom from this strange unanimity between an Ultramontane priest and a latitudinarian diplomatist? Whatever may be the explanation of the fact, and it is doubtless not very recondite, there are many in whom it will cause unfeigned surprise. They will suppose that an uprising of true patriotic and popular enthusiasm would inevitably bring with it a rebellion against the arbitrary spiritual rule of the Roman Church,—and that this rebellion would be most advanced where political freedom is most advanced, in Sardinia. Such, however, is not the case. And we see no paradox in the fact that the first dawn of political hope should rather awaken Roman Catholics to all the nobler elements in their own worship, than turn their attention to the errors in their *creed*. The popular intellect is for the time fully absorbed with political problems. It has no time at the moment for controversial studies. But the popular breast is deeply stirred both by hope and gratitude; and the movement there naturally enough tends to deepen the piety and renew the significance of the popular worship. That this can be the case,—even for a time,—sufficiently proves that the Roman *Church* has not sunk into the same complete and abject disrepute into which the Roman *Government* has certainly sunk among Italians. There is still life in it to interpret the awakening emotions of patriotic joy and trust, to express the exultation of the people at the birth of political liberty, and to nerve them for new sacrifices and new toils.

We may be permitted to observe parenthetically that we, at least, should certainly not wish it to be otherwise. As Protestants, we would far rather see the political change completed before the spiritual movement begins. We would far rather see the latter slow, gradual, deliberate, than see it associated with all the irritating exaggerations of a political revolt. We would far rather that the change, when it comes, should not come in the shape of an extreme reaction, like the Calvinism, Lutheranism, and Puritanism of the sixteenth century, but should respect all the noble elements in Catholicism, while throwing off its ecclesiastical despotism, and its exhausted superstitions.

But it is not with the views of Protestants on this point that we wish to deal. We desire rather to appeal to Roman Catholic opinion,—to those who believe that the Roman Church is really eternal and divine, and to ask them to consider from their own point of view the bearing of the important fact, on which Count Cavour's testimony coincides so fully with Dr Cullen's. What ought that fact to teach them? Clearly that if Rome will accept the popular Italian will in political matters, she may gain more influence than ever over it in spiritual matters,—that she must stoop to conquer, and yield in this—which is an "accident" of her spiritual influence—in order to extend that influence in its deeper essence. To all who honestly believe Romanism to be true, it ought now to be clear that a great opportunity is before the Church which, if she is wise, she will eagerly seize upon. Nothing can arrest the progress of secular liberty in Italy. Victor Emanuel is the unanimous choice of the whole nation; and the Papal sovereignty is doomed. It remains only to choose whether by accepting its defeat, the Roman Church will avail itself of the returning piety of a hopeful era, and gain a firmer hold than she has had for scores of years on the conscience of Italians,—or whether she will risk all her influence in a desperate cause.

It has been said to be the great power of the English that they do not know when they are beaten; but this is a power which may be carried too far, and become a pure futility and weakness. It is quite as needful to recognise defeat fairly, as to ignore it while it is doubtful. The captain who fails to leave the sinking ship is as worthy of blame, as he who leaves it without due exertions to prevent its sinking. The secular power of Rome is such a wreck. If the Pope holds by it, he will endanger the spiritual power of the Church which is not yet threatened. If he abandons it, the Papacy will have a new lease of life,—probably even a new gleam of strength, vitality, and splendour.

SIR BARTLE FRERE ON THE INDIAN LICENSE BILL.

The following speech of Sir Bartle Frere's in the Legislative Council on the 25th August, on the Bill "for the Licensing of Arts, Trades, and Professions," will have much interest for our readers:—

"Sir Bartle Frere said that, the last time he had the honour to address the Council with regard to the financial measures of Government, he expressed the diffidence and regret which he felt in being charged with the amendment of any measure which had been brought in and carried through the Council by the late Mr Wilson. Since then it had pleased Providence to take him from among us, and he (Sir Bartle Frere) believed there was not throughout India a single right-minded Englishman who did not feel his death as a personal as well as a national loss. He was sure that, when the intelligence of this melancholy event reached England, Mr Wilson's loss would be mourned in the same manner as was that of Neil, of Havelock, of Nicholson, and of Peel. What Mr Wilson's loss would be to Government, those only who had laboured with him could understand. If he felt any diffidence when it fell to his lot to make a few amendments of oversights and omissions in a measure stamped with the approval of his Right Honourable Friend, when he hoped that his (Mr Wilson's) absence from the Council was only temporary—how much stronger must those feelings be when he found himself intrusted with the prosecution of a measure which had been brought in and left incomplete by his Right Honourable Friend. For any question of this kind, and, indeed, for any question connected with finance, Mr Wilson had peculiar privileges and qualifications, and they were as conspicuous and as generally acknowledged in this Council as in any other part of the Queen's dominions. It was not only that we had experience of his large statesmanlike views and great abilities in the transaction of every branch of public business, but we felt the same confidence in his opinions on every subject connected with finance which was accorded to him by men of every party at home. He was a master in his craft, and no other man could possibly

succeed in gaining that amount of public confidence for his judgment on all financial matters which Mr Wilson so justly possessed. He (Sir Bartle Frere) could claim no such qualification, and he should have felt the greatest difficulty in undertaking the completion of any work which his Right Honourable Friend had left incomplete, had it not been as a matter of duty to the Government to which he had the honour to belong, and in compliance with the wish which his Right Honourable Friend had expressed on his dying bed. Undertaking the task under such circumstances, he felt that he was only doing a simple duty, and he undertook that duty in the hope that strength would be given him to carry it through. It was in no spirit of presumption that he would proceed with the task, but there were considerations which encouraged him to proceed. In the first place, the work which the Right Honourable Gentleman left partially complete, was founded on those great principles which for years past had regulated our financial policy in all other parts of the British Empire—principles so broad and simple that, like all great truths, they appear after demonstration almost self-evident, and once laid down by a master workman, the only difficulty was to ensure their being truly and faithfully carried out. Then, again, there were peculiar facilities in following Mr Wilson through anything to which he had put his hand. Such was his clearness of intellect and such his thorough business habits, that he planned beforehand with the utmost distinctness whatever he intended to execute, and he (Sir Bartle Frere) believed that, at the time he commenced upon his financial measures, his Right Honourable Friend had clearly laid out before him schemes of work which he expected would have occupied him many years before their fulfilment. He left everything connected with the measures on which he was engaged, so prepared, that there was less difficulty than might have been expected in taking up his work. But, besides this, there were also two sources of confidence, which enabled him (Sir Bartle Frere) to feel some trust that he might successfully carry through the task before him. He (Sir Bartle Frere) had, and so, he was sure, every other member of this Council had the most unbounded confidence in the resources of India, if time only were allowed for their full development. He also felt the most unbounded confidence in the patriotic feelings of our fellow-countrymen who were associated with us in this country, whether in or out of the Government service, and he felt sure that he might rely on the entire support of this Council in giving its honest experience and advice on every subject that came before us. Still the task was one of no ordinary difficulty. Relying on the assistance he had before him, he hoped to be able to carry it through, and whatever might become of the workmen, the work would be carried on for the sake of the country.

"When Mr Wilson last gave a sketch of his financial schemes, he stated very clearly the condition in which we then stood, and he sketched out the measures by which he hoped to see that condition improved in the course of the next twelve months. He first of all adverted to the reductions which were necessary to be made in all branches of expenditure. The period had not yet arrived, and was not likely for some time to come, when it would be possible to state the precise amount to which those reductions might reach. But he might briefly state that there was even greater promise of large reductions of expenditure being carried into effect than when Mr Wilson made his financial statement. Since then we had been seriously threatened with a famine in the North-Western Provinces, and a considerable diminution of revenue was anticipated. He trusted, however, that all ground for this serious alarm might now be said to be at an end. It was true that there had not been a good season, but still there was ground to hope it would not be such a one as would embarrass the finances, or seriously derange the calculations on which Mr Wilson founded his scheme. Since his last general speech on the question, the Military Finance Commission had continued its useful labours, and now at the end of twelve months after its appointment, the wisdom of that measure was becoming apparent, and he had no doubt it would be found a most powerful engine in bringing our finances into order. Since April last, a second Commission had been appointed for the purpose of reducing the expenditure in the Civil Establishments, but it was impossible as yet to say what the result would be. Within the last few days a Police Commission had also been appointed, and it was to be hoped that it would be found most useful in effecting a reduction in the expenditure on account of police and other levies and semi-military bodies. Above all, there was that very effective system of estimate, budget, and audit as explained in the published resolution of Government. It would take fully a twelvemonth before that system could come into full and active operation; but it was to be hoped that the measure was a sound one, and would in future years be of the utmost service to the Government, by enabling them to control the general expenditure of the State. He might mention that during the current year the budget system had for the first time been in force in the Public Works Department. Out of the sum total at the disposal of the Government of India for Public Works, assignments had been made to each Government in proportion to their wants as previously estimated by the local Governments themselves, and these assignments were made in such a form as would leave to the local Government much greater latitude and choice in sanctioning particular works, and would be the foundation of a system which would enable the local Governments to make the best possible use of that proportion of the resources of the State which the Government of India would be able to place at their disposal. But as Mr Wilson repeatedly reminded us, the utmost extent of our reduction could never make both ends meet without additional taxation. He need not tell the Council that the Income Tax, the Stamp Act, and other measures of Government to increase the revenue, had already been passed. He proposed to-day to explain briefly the alterations which Mr Wilson had proposed in the general provisions of the Licensing Bill. On some future day he hoped to address the Council on the subject of the Currency measure, which the Right Honourable Gentleman had left in so very advanced a state that he (Sir Bartle Frere) anticipated no serious difficulty in carrying it into effect.

"He would now explain the principal changes which it was proposed to make in the Licensing Bill already before the Council. He would not ask the Council to go into Committee on the Bill to-day, as he wished to have the proposed amendments printed and placed in the hands of Honourable Members before they came on for discussion.

"Mr Wilson had, in the first place, proposed a change in the title of the Bill, so as to make it one for the grant of certificates to persons exercising arts, trades, or professions, and of licences to dealers in tobacco.

"In the second Section of the Bill, it was proposed to omit the enumeration of professions introduced by the Select Committee, and to revert to the definition in the original Bill.

"As the Bill now stood, many persons would be liable to pay both License Tax and Income Tax. This was not in accordance with the principle of the License Bill as a supplement to the Income Tax rather than as an additional impost. It was proposed, therefore, that in all cases where the two taxes would be coincident, as the Bill now stood, one tax should only be levied, so as to make the Bill a supplement to the Income Tax Act.

"It was proposed to insert a provision, that certificates of persons dying, or transferring any business, should be transferable to the heirs and assigns of the person who took out the certificate, and it was proposed to extend the exemptions in Section XV. of the Bill, so as to include all labourers and working men whose wages did not exceed four annas per diem, and to soldiers, sailors, and other persons in the receipt of salaries from Government. This brought him (Sir Bartle Frere) to the objection which had been raised to the Bill, that it taxed artisans, tradesmen, and professional persons, and exempted salaried servants of Government, annuitants, and pensioners. But he (Sir Bartle Frere) hoped that he could show that this objection was not well founded; at any rate it would be less applicable to the Bill as it was proposed to amend it. He need not remind the Council that there were large numbers of those who benefited more than any other class of the community by the prosperity of the country, and who contributed most largely in England to the public revenue, by

paying to the Excise and Customs, but who here escaped almost untaxed. There was no class on whom the burden of supporting the State fell so lightly as on the minor traders and artisans, and there was none so benefited by good and orderly Government; their profits and earnings increased with the prosperity of the country in a far higher ratio than those of most other classes, and it was right that they should contribute in proportion. But it was otherwise with persons who had fixed incomes from salaries, pensions, or annuities. Their incomes were stationary, while the cost of living was greatly enhanced. To take the example which had been cited, it had been asked why should barristers pay, and judges be exempted? The answer was that barristers prospered with the growing prosperity of the country, and their incomes increased, whereas the judge's income was stationary, though the cost of living had a constant tendency in a prosperous community to increase. This example would hardly bear illustration under the Bill as he (Sir Bartle Frere) proposed to alter it, because barristers would generally be exempt, but he mentioned it as an illustration of the essential difference in the principle which should regulate the taxation of the two classes.

"With regard to tobacco, a great mass of very valuable information had been received from the various Governments, the more important portions of which would be laid before the Council. Much of it had bearing on other questions than that immediately before us in the Bill, which related merely to the rates to be charged for tobacco licenses. The object of Government was to fix the tax at an amount so moderate as not to force any one who now dealt in tobacco to give up that branch of business, so that every present seller of tobacco might take out his license and continue to sell. For this purpose, the rates had been fixed purposely low, and would vary in classes from one hundred rupees for the largest wholesale dealers down to two rupees per annum for petty retail sale. He (Sir Bartle Frere) hoped, next week, that the proposed amendments would be in the hands of all members, in time to admit of the Council proceeding to consider the Bill in Committee at their next sitting, and he, therefore, begged to move that the Committee on the Bill be postponed till Saturday next."

Agriculture.

A DAY WITH THE SHORTHORNS.

Partly with an eye to business in the purchase of some Shorthorn heifers, and partly for the enjoyment of a rural holiday, we started on Tuesday morning by the first train from Paddington for Mr Stratton's, at Broad Hinton, in Wiltshire, to go with him through his magnificent herd of Shorthorns. Of course it rained, as it always has rained during the past summer, and rained heavily and continuously till mid-day. Nothing can look more drenched than the country looks throughout the whole distance, and whatever farm-work can be retarded by wet weather still remains undone. The wheat, however, is all carried, save a field or two we noticed in Wiltshire, and a few oats yet remain abroad, some of them, indeed, not yet cut. Beans are all in the fields; some also not cut. The bean crops appear, and are said to be, remarkably heavy, but the land on which they have grown is everywhere foul and full of grass, effective weeding having been during the last spring wholly impossible. As wheat universally follows beans, the wheat-sowing season of the present autumn must be a late one. This, where the land is in good condition, is not much regarded; but, taking all sorts of farms and all kinds of farming into consideration, a late wheat-sowing season seldom leads to so large a return or so wide a breadth as an earlier autumn season. In the pasture lands of Berkshire and Wiltshire, the cattle, in spite of the wet, are in good condition; and in Wiltshire it is impossible to avoid being struck with the improved character of the cows and heifers on most of the dairy farms. The labours of Mr Stratton and his fellow-breeders of that and adjoining counties are producing he tbest results in improving the cattle of Wilts, Berks, and Gloucester. This is mainly by the agency of Shorthorn bulls of pure blood, for which most of the extensive dairy farmers give 50*l* and 60*l* when yearlings. The Shorthorn cow, when not made over fat as a calf, is found to be a first-rate milker, far superior indeed, quantity and quality being considered, than any other breed of cattle. True it is that prize Shorthorn heifers seldom prove good milkers, and the reason is, that the high feeding necessary to fit them for prize competition must be commenced from birth, and so develops the fat-producing organisation, that usually heifers so treated will not in after life produce large quantities of milk. We say usually, for it is by no means uncommon to find the same cow producing much milk, and at the same time keeping herself in high condition. Mr Stratton has several illustrious examples of this in his herd. Nor does it follow that a prize heifer, though herself not a good milker, may not be the mother of good dairy cows, provided her heifer calves are so reared as to adapt them for dairy purposes. It rests, in fact, with the breeder of Shorthorns whether he will rear feeding or dairy stock, the breed itself being equal to either fortune, and is equally fitted for producing meat at an early age, or cheese and butter, according as the one or the other purpose is required of it. At the same time milking power is undoubtedly inherited, and the Shorthorn breeder who desires to rear dairy cattle should pay attention to the characteristics, as dairy cows, of the dam and grand-dam of the heifers he rears.

At Broad Hinton we found the herd in high health and condition, and amongst them the heifers and young stock which had just returned from the Worcester Agricultural Show, where Mr Stratton had carried off, we believe, all the prizes for Shorthorns. We have so recently stated the most remarkable facts relating to the formation and management of this herd brought down to a very recent period, which we derived from a full and accurate account published in the *Mark Lane Express*, under the head of "The Herds of Great Britain," that we shall not now repeat them. The marked characteristics of Mr Stratton's herd are strength of constitution, and heavy flesh in combination with blood and quality. He holds that a pedantic devotion to pedigree, without at the same time paying at least equal attention to form, size, and usefulness, to be a serious error, and it is one to which many Shorthorn breeders of past and present times have fallen into. He considers that he has mainly exploded that exclusive devotion to pedigree once prevalent; that, *without* "ruining the blood," he has "much improved the flesh," and has led his rivals and competitors to do so likewise. Not that Mr Stratton overlooks blood, for Booth and Bates blood are largely represented in his herd; but unless any animal be a good one, he does not care to breed from it, however well descended it may be.

It is worthy of note that nearly all our great Shorthorn breeders have been largely indebted to some cow of especial worth as the foundation of their herds and their most eminent success. Mr Bates and his descendants from "Duchess," will at once occur to the reader's mind as a prominent instance of the kind. Well, Mr Stratton has his favourite blood constantly referred to as "the old cow." If there is a heifer not to be parted with, she is found to inherit a large amount of the "old cow's" blood. The pet portion of the entire herd, the past and future prize winners, the cows and calves, which the visitor at once sees must have attained past and are destined for future fame, all claim kindred—and the closer the kin the more valued—with the "old cow." To retain and perpetuate the largest quantity of the old cow's blood in individual animals, in-and-in breeding has been again and again, but with much discretion and with unflinching regard to form and substance, resorted to. And it has beyond a doubt been most successful. If you are struck with some cow of grander proportions and finer symmetry than her field-fellows, you learn that the old cow's blood formed the stock on which fashionable grafts have produced the animal you admire. There is "Matchless" the something—the fourth we believe—which, for form, colour, carriage, and all that distinguishes the fine Shorthorn from ordinary cattle, attracts and rivets immediate attention the moment you enter her field: she has beaten all or nearly all the competitors with whom she has contended, and is a close relation by descent of the old cow. Now this old cow was "Moss Rose," the daughter of a heifer, bought by Mr Stratton in a country market, without name or pedigree. She was, doubtless, thorough-bred, but the trace of her lineage had been lost. Put to a bull of known and good blood, "Phœnix," she produced "Moss Rose," and "Moss Rose" may be said to have formed the Broad Hinton herd—aided, be it noted, by more than twenty years of unwearied care, skill, and selection of good as well as well-bred animals. The first "Matchless" was by "Red Duke" out of "Moss Rose." The bull now doing good service in the herd is Windsor second, a son of Mr Booth's Windsor. He is white, and many of his calves take after him in colour, but with dark-coloured cows his calves are the darkest of roans, while the form and substance of all are extremely good. A very nice roan bull, the Knight of Manloo, of Booth blood, bought by Mr Stratton in Ireland, is also in use, and great things are expected from him.

On visiting the Broad Hinton Farm one is struck with the extent of the herd. We know nowhere were the purchaser of Shorthorn heifers can go to with so good a prospect of suiting himself. Unlike many breeders, Mr Stratton does not stand out for extravagant prices, nor has he so limited the fertility of his herd by high feeding that he cannot venture to part with his females. His breeding business, like the rest of his farming ventures, is on a large scale, and with one of the most prolific herds in England, he acts on the principle of modern trade, of moderate profits and quick returns. That such a system has answered, all about him betokens. He has a Fowler's steam plough, and he has this year, with the help of his mowing machines, got up the whole of his hay in capital order. The rapid work of the machines, a Woods and a Burgess and Key, each cutting ten acres a day, has

enabled him, with the aid of large hands of hired haymakers, so to use the fine fortnight of August that his extensive herd is well provided with hay for the ensuing winter. Another satisfactory evidence of success is that Mr Stratton has just purchased a capital grass farm of 500 acres, a few miles distant from Broad Hinton. One peculiarity in Mr Stratton's management is that he sets but little store by roots, either swedes or mangold, and he finds that cattle without roots do quite as well or better than those to which roots are given. This is contrary to our own experience, though there is, no doubt, too many roots commonly used. The herdsmen are always inclined to overdo the stock with roots, and it is one of the great uses of the root-pulper that by its use the quantities of roots are somewhat restricted.

COMMERCIAL LITERATURE.

The Present Position and Future Prospects of the Grand Trunk Railway Company of Canada. Abbot, Barton, and Co., 35 Wellington street, Strand.

The Economist in its two last numbers has devoted so much space to the consideration of this subject, and we have expressed so deliberately the conclusions to which we have arrived as to the policy the shareholders ought to adopt to rescue their property from its present depression, that we might be excused from again recurring to the subject; but as the pamphlet before us takes up the matter from a Canadian point of view, it would be as well perhaps that the question should be further ventilated, by briefly placing before those who are so deeply interested in the matter any feasible plan having for its object the permanent benefit of this, at present, most disastrous investment of British capital.

First, let us state the conclusions to which we had arrived in the two articles we have devoted to this subject.

1. That hitherto the traffic has failed to the extent of one-third, in consequence of financial pressure and bad harvests in Canada—disasters both of them now removed.

2. That the traffic has been, and is, largely kept down by the deficiency of rolling stock and plant.

3. That the Province of Canada is bound by positive obligation and by the plainest policy to stand by the Grand Trunk at least until the average yearly traffic reaches 25*l* per mile per week.

4. That the remedial measures to be at once adopted are shortly these:—Combined and cordial action between the English directors, bond and shareholders in proposing to the authorities of the Province a speedy and searching inquiry into the working arrangements of the line,—and founded upon the results of that inquiry, the adoption of vigorous measures for obtaining from Canada fulfilment of the pledge under which 10 millions of English money have been spent in seven years for the advancement and benefit of the inhabitants of that dependency.

We now proceed to give the reasons of the pamphleteer why the Canadian Government ought not to be called on to give assistance to those who have placed too implicit a credence in Canadian statements. "The sooner (observes the author) the hope of obtaining a guarantee from the Canadian Government is dispelled the better;—the proposition is utterly impracticable."

Why impracticable? The answer given is a quotation from the Annual Message of Mr Buchanan, the President of the United States—viz., because it would increase the patronage of the Executive to a dangerous extent, and would foster a system of jobbery and corruption, &c., &c. We certainly do not think this objection has much force, because it could with care be prevented; let us, therefore, examine the remedy proposed. The remedy is to complete the railway communication between Halifax and Quebec, and to call on the Imperial Government to fulfil their pledge to guarantee it. Three hundred and fifty miles remain to be made of this railroad, "the cost of which would be 3,000,000*l*. To this end Canada, New Brunswick, and Nova Scotia, in addition to a most liberal grant of land, have agreed to give 60,000*l* a year in perpetuity. Insist upon the Imperial Government doing the remainder as a fulfilment of one moiety of their pledge of assistance so repeatedly offered. And, as the Cunard and Galway contracts cannot be broken, claim from the Imperial Government, as a measure of simple justice, the same amount of assistance to steamers running to the ports of British North America that is given by the Imperial Government to those running to the United States."

This ist he remedy proposed by the pamphleteer. In his opinion it is to the proper "development of the through traffic that the Grand Trunk Railway share and bondholders must look for their dividends."

Now it appears to us that both the remedy proposed by the Economist and the remedy proposed by the writer of the pamphlet ought to be adopted. Let the Imperial Government, the Canadian Government, and the Grand Trunk Railway agree to appoint a competent commissioner to report—1st, as to the sum required to render the rolling stock and plant efficient; 2dly, as to the working arrangements of the line; 3dly, as to the sum required to complete the railway communication between Halifax and Quebec, with a branch if necessary to St John's; and then let the sum required for these purposes be guaranteed, with a sinking fund for its redemption, by the Provinces according to their population in the first instance, and failing that guarantee, by the Imperial Government in the second; so that those who advance their money may have as good a security as is to be found in the world. Let shareholders and directors *cordially unite* for these purposes, and they may yet live to see the Grand Trunk of Canada one of the most flourishing railways in the world. We have, however, in former times often protested, and must again now protest, against the absurd proposal of granting assistance to the Canadian line of mail packets which we do not need, after already paying high for the transmission of our mails by the Cunard line. It is a proposition for which "in simple justice" there is not the shadow of a plea.

The British Tariff for 1860-1. By Edwin Beedell. Baily Brothers, 3 Royal Exchange buildings.

The thirty-fifth annual edition of this standard work is brought up to October, 1860. So great have been the changes in our fiscal legislation since the introduction of the Consolidated Customs Duties Act of the present session, that however admirable and correct Mr Beedell's former editions of the British tariff were, they are now completely superseded by the present edition. If we remember rightly, before Sir Robert Peel inaugurated his system of free trade, upwards of 1,200 articles paid duty: these by the present tariff are reduced to twenty-six. For facility of reference and general convenience, Mr Beedell has arranged the existing Customs duties in alphabetical order in a separate chapter. The General Tariff, embracing duty-free as well as duty-paying goods, is retained in the same form as in former editions.

Our merchants are painfully aware that, although the duties are confined to twenty-six articles, the Legislature introduced a new element of taxation in the form of a Customs charge on all goods, wares, and merchandise (with one or two trifling exceptions), whether free or chargeable with duty on importation. These and all other fiscal rates and charges now in force, pertaining to the several departments of the revenue, together with the latest regulations, will be found in the present edition in their proper order and place.

Hunt's Merchants' Magazine and Commercial Review. G. W. and J. A. Wood, New York. Sampson Low and Co., London.

The mere fact that this is the two hundred and fifty-fifth number of this Magazine speaks much for the care with which it is conducted and the value of the information it conveys. There is an article on "Financial Heresies," in which the writer starts some curious ideas, especially the following as to accommodation paper:—"All promissory notes and bills are *accommodation paper, precisely one and the same thing;* and when discounted in bank, unless the proceeds are paid in *real money at once*, they are exchanged for the *accommodation paper*, or debt of the bank. The bank exchanges notes with its customer; no value passes—it is nothing but *kiting*."

The writer seems to forget that when the Bank parts with its notes convertible *on demand* into gold, it is precisely the same thing to the holder of the note as if it parted with real money; it is only because it suits the holder of the note that it is not converted; but this is a very different thing from an accommodation bill which need not represent real property. The "Statistics of Trade and Commerce" contained in this Magazine are extremely valuable, as likewise the Journal of Banking, Currency, and Finance. The present number well sustains the merit of this publication which is so much appreciated in America.

GENERAL LITERATURE.

The History of Italy, from the Abdication of Napoleon I., with other Introductory References to that of Earlier Times. By Isaac Butt, formerly Professor of Political Economy in the University of Dublin. Vols. I., II. Chapman and Hall.

If clearness of arrangement and distinctness and continuity of plan are to be considered the criteria of a good history, the work of which these are the two first volumes will be at once put out of court. Whether in delivery to an academic audience the sequences and transitions of the story might appear more natural and less abrupt than they do in an ordinary perusal we cannot say; but assuredly, when read in the way of other histories, Mr Butt's narrative is strikingly wanting in that *unity* and regularity which are now the watchwords of Italians in their aspirations for their common country. It is not the blending of ancient and modern history in narrating the fortunes of the various principalities of Italy that we find fault with, but the manner in which the main stream of the story is dispersed and lost among a variety of disconnected chapters. Thus the main subject-matter of the work is only to be discovered in a variety of intercalary passages, scattered up and down the two volumes with a most painful disregard of chronological order. The result is—judging from our own mental experience—a confused medley of men and things, such as we scarcely ever remember to have experienced in a work possessing such undoubted claims to public attention; for Mr Butt's book is one of real ability, and full of the results of patient and intelligent reading. Though the scale on which the several subjects are treated is anything but

well-proportioned, each portion is, taken by itself, interesting and valuable; and the chronological indexes, summaries, and lists which are introduced here and there rather capriciously and unexpectedly, though they do not supply the want of a connected and continuous narrative in the text of the work, will be found extremely useful to the student as well as the general reader. Those who are appalled at the bulky diffuseness of Sismondi's great work on the Italian Republics, and who feel a natural distaste to the meagre and skeleton histories into which his labours are usually abridged, will read with much satisfaction the condensed yet lively summaries of mediæval history which Mr Butt supplies as the results of an extensive and thoughtful course of reading. The interest of a really good book, therefore, has been seriously impaired, though not destroyed, by an injudicious plan of arrangement. No doubt there are great difficulties in the way of any general history of modern Italy; but nothing could be more unfortunate than the plan into which Mr Butt has been misled, of giving first a general outline which, to be at all intelligible or useful, must to some extent anticipate the fuller details in the subsequent special chapters, and which detracts from their value and interest, while it is quite inadequate as a guide or index to their contents. Just as necessary detail is sacrificed in the former part, so the general narrative is painfully dislocated by the separate special histories of Piedmont, Naples, and the Pontifical States, in the succeeding portion. Mr Butt's object would surely have been much better attained by first laying down a few general historical landmarks, and then writing the history of the transition of mediæval into modern Italy, by grouping contemporary events in the different States with reference to their common or distinctive features, and their joint or separate bearing on the general relations of Italy to the rest of Europe. In this way he would have avoided anticipations and repetitions, and might have enlarged rather than changed his plan when he arrived at the epoch which he intends to be the main subject of his work.

We should not have dwelt on these defects in Mr Butt's history if we did not think it intrinsically a good one, and we now gladly turn from all unfavourable criticisms to glean a few facts from his pages which may be of interest at the present moment.

Speaking of the House of Savoy—the now all but established Kings of Italy—our author pronounces in favour of the pedigree which traces them to an Italian rather than a Saxon stock. Their recognised history starts with Humbert the White-handed in the early part of the eleventh century, but "Cibrario, in his 'Storia della Monarchia de Savoia,' has produced elaborate proofs of the descent of Humbert from the Marquis of Ivrea through Adalbert and Guido, Kings of Italy." Piedmont came through an heiress at first to a younger branch of the family. In 1562, the brave Emanuel Philibert removed the seat of government from Chambery to Turin, having once declared that he would live and die an Italian Prince.

The Savoyards, as may be believed, were indignant at the transfer. In the minds of the superstitious, the loss was more severly felt, because with the court was transferred that sacred relic—the Sacra Sindone—which, for more than one hundred and fifty years, had been religiously enshrined at Chambery. Believed to be the actual winding-sheet of our Saviour, this precious possession was brought to Turin to accommodate the feebleness and age of St Charles Borromeo, the good Archbishop of Milan, who had left his home on a pilgrimage to that holy relic; the king was anxious to spare him the fatigue of a journey across the Alps. Carlo Borromeo was saved the journey, but the Sacra Sindone never found its way back to its former shrine.

The Savoyards have at least this satisfaction, that the same movement which has now rent their little principality entirely from the sceptre of the descendants of their old Counts and Dukes, is likely also to deprive their ancient rival Turin of its three centuries of metropolitan dignity. Of the House of Savoy itself, Mr Butt says:—

The old saying of their own country records the common superstition, that seven generations of the House of Savoy must pass untainted by the production of a coward or a fool. Without minutely testing its truth, it is enough to say that these traditional aphorisms, which thus pithily express popular belief, supply, in their general existence, some evidence of their truth. They are testimonies to character which no adulation of courtiers can create. There is more of exaggeration in another of these sayings, which tells us that this family have supplied more blameless knights to the true annals of chivalry than have been invented in the fictions of its romance. Nearer perhaps to the truth is that which accords to them the more worldly praise of always having the courage promptly, and therefore successfully, to meet the spirit, and accommodate themselves to the exigencies of their age. Few countries in Europe have not felt their influence. In England, in the days of Henry III., that influence was matter of national complaint. A prince of Savoy held the earldom of Richmond. To recent times the palace of the Savoy, the residence of this earl, survived, as a memorial of the esteem in which the Savoyards had once been held. Its last buildings were removed to make way for Waterloo bridge, but the royal chapel still stands, and the curious explorer can still trace in the vicinity the crumbling remnants of a wall that once formed part of the mansion of "Peter of Savoy."

Here, on the other hand, is a specimen of what we suppose a certain minister would have called the "wise moderation" of Austria:—

In 1799, the very year after the victories of Napoleon, his conquests were wrested from the republic with a rapidity almost as marvellous as that with which they had been achieved. The victories of Suwarrow placed him in possession of Turin; and, by the invitation of the Muscovite commander, Victor Emanuel left Cagliari in a British man-of-war, and landed at Leghorn to resume the possession of his kingdom.

The progress of the returning monarch was stopped by a transaction as strange as any which the annals of European diplomacy record. The ministers of Austria insisted on the cession of Piedmont to their imperial master. All Italy north of the Po was included in the claim which they put forward. On the other side of the Alps, they asked for Dauphiny and Savoy. The provinces which the treaty of Tolentino had severed from the Papal States were also demanded as additions to the Austrian domains.

The claim of this enormous acquisition of territory could hardly be expected to meet with an immediate and unhesitating assent. Negotiations ensued, in which the Austrian cabinet threatened, that if their demands were not conceded, they would open with France negotiations for a separate treaty of peace. England was asked, not only to accede to these demands, but also to induce or compel the acquiescence of the Sardinian King, and to persuade the King of Naples to withdraw the claims which he was making to a portion of the Papal States.

The cabinet of England temporised with these extraordinary claims. Lord Granville, then the English Secretary, secretly instructed Lord Minto, the British representative at Vienna, that, while England would not view with alarm or dissatisfaction the aggrandisement of Austria, there was difficulty in supporting these pretensions to their full extent. At one time the British minister believed that he had succeeded in inducing Count Thugut to moderate his pretensions upon Piedmont, and to be content with the possession of the High Novarese, the fortress of Alessandria, and the command of the Piedmontese army. This moderation was afterwards disclaimed upon the singular plea, that in making these mitigated proposals the Austrian minister had been in jest! At the very last minute, a claim for Parma and Lucca was put forward, and the imperial cabinet refused to disclaim the intention of an appropriation of the Tuscan States.

From the cabinet of St Petersburg, the Austrian proposals met with a much more manly and determined opposition. There is little doubt that it was the conduct of Austria upon this occasion which alienated the Russian Emperor, and broke up the alliance against France. Paul had joined the coalition of 1798 against France with the avowed object of restoring everything to the state in which it had been before the revolutionary war. He had formed an earnest wish for the restoration of the King of Sardinia, and this object the Emperor personally regarded with an intensity of feeling that was, perhaps, a symptom of the malady that was effecting his mind. His ministers, who probably did not look upon the aggressive demands of Austria with just the same complacency as England, were not prepared to abandon the rights of the legitimate Sovereign of Piedmont. Austria, however, was firm in her demands, and finally the foreign minister of the cabinet of Vienna stated the unalterable resolve of his imperial master never to consent to the restoration of the Sardinian King.

Meanwhile, at Leghorn, Charles Emanuel awaited in astonishment and dismay the result of these singular negotiations. The dispute was settled in a manner which none of the parties would have desired. Buonaparte returned from Egypt, and in the following year the campaign of Marengo restored in Italy the ascendancy of the French arms.

The Neapolitan vicissitudes under the Bourbons and French ascendancy are detailed in an interesting manner. The adventures of King Joachim Murat, though told much too diffusely, supply a chapter of romance only equalled by that which is now being acted on the same arena. Full justice is for the first time done to the heroism and high qualities of Caroline Buonaparte, his devoted wife. But we must confine ourselves to a significant sketch of the last moments of the other Queen Caroline of Naples—the wife of Ferdinand—the daughter of that most odious of paragons—Maria Theresa:—

Even in Vienna she was unable to restrain that fiery spirit which had so often led her into indiscretions that betrayed her secret thoughts. At the very time when she knew that the cruelties of her husband's reign were used as an argument against his claims, she boasted of the punishments she would inflict when Naples was once more her own. To some of the ministers of Austria she showed a long list of the persons she had determined, on her resuming the sovereignty, to proscribe.

Her longings for vengeance were never to be gratified. She was not destined ever again to enter Naples, or even at Vienna to plead the cause of herself and her husband with those personages whom she hoped to influence by her address. On the 7th of September she died suddenly in the imperial castle of Hetzendorf, where, after a short stay at Schönbrunn, her residence had been assigned. The excitement of her position, and the fatigues of the journey, were too much for her nervous system, shattered by the use of opium, and preyed on by the guilty memories of her life. During her visit to Schönbrunn, her attendants, or even her visitors, were often startled by sudden cries of terror, or amazed by wild words which she addressed to some mysterious intruder, whom her scared imagination conjured up. In the corridors of the palace, spectres, invisible to others, beckoned her as she passed. On its long straight gravel walks, and under the shelter of the hedges of its old-fashioned gardens, the voices of unseen messengers summoned her by name. Probably, in the midst of terrors like these her spirit passed away. Her attendants found her dead in her chair, her mouth wide open, as if in the attempt to call for assistance, and her hand extended towards the bell-rope, which she had not strength to reach. Her death was attributed to the rage into which she was thrown on hearing on the last evening of her existence, that the Russian Emperor had declared that the events of 1799 made it impossible ever to restore to Naples its "butcher king."

THE EDINBURGH REVIEW. October. Longmans and Co.
THE QUARTERLY REVIEW. October. John Murray.

THESE are fair average numbers of our two leading Quarterlies. It is characteristic of the perfect lull in our home politics, that they

should not have inspired a single article in the organ of either of the great political parties. The "Edinburgh" discourses of the progress of Geographical Discovery—of Ancient Sanskrit Literature—of history in its various forms of national, local, and personal—of Palestine Churches—and "Brain Difficulties"; but its political science is confined to an article on "Grotius and the Sources of International Law," and its practical politics to a vigorous dissection of Mr President Buchanan. The nearest approximation to politics in the "Quarterly" are articles on the Brazilian Empire—"Competitive Examinations"—and Land and Sea defences,—while the great body of its pages are occupied by a miscellany of subjects which have no special relation to the past quarter or to current events. The most important article in the "Edinburgh" is that which deals with Mr Buchanan. Too favourable a judgment is passed on the oratory and good sense of Mr Sumner, but full justice is done to the inevitable working of the present American governmental system. The conclusions of the writer do not differ essentially from those of Lord Grey, though the subject is looked at from a rather different point of view. The trickery and instability of the official life of the United States are quietly but effectually exposed, and some useful hints will be found on the characters and prospects of the candidates for the Presidentship. In striking contrast to this deplorable picture of the great North American Republic, the "Quarterly" gives a very favourable, perhaps rather highly-coloured, account of the great offshoot of Portugal—the infant Empire of Brazil—which appears to hold out the only prospect of a settled and powerful government South of the Gulf of Mexico. Much still remains to be done before we can look with unmixed satisfaction on this South American royalty. The prospect is, however, bright, and with a seemingly honest and moral court and a contented people, the natural advantages of this State ought to be cultivated with pre-eminent success. The writer very justly points to one great cause of the internal tranquillity of Brazil in the tranference of the seat of Government to it, while still a colony of Portugal, during the Peninsular occupation by Napoleon, and the inauguration of its subsequent independence under the auspices of the Prince Regent himself.

The article on "Competitive Examinations" in the "Quarterly" is a laboured attack on the new system of public examinations, and in connection with these on Sir Charles Trevelyan. On the other hand, "Public School Education" is a discriminating exposition and defence of this latter system, with strong recommendations as to the necessity of its improvement and increased efficiency, as anticipatory of much of what is now unreasonably expected from the more advanced stage of University training.

Both "Edinburgh" and "Quarterly" devote an article to the much mooted but ever lively controversy as to the respective policies of Pym and Hyde in the great civil struggle of the seventeenth century, *apropos* of recent works on that subject. The "Edinburgh" reviewer seems to us the best informed from original sources,—the "Quarterly" to be the most masterly in his general handling of the subject, though we dissent *in toto* from his conclusions, which are singularly weak as proceeding from so efficient an advocate. His sketch of Pym, though hostile in its tone, is a vivid portrait which preserves the broad features of the great Parliamentary statesman, though it fails to grasp the problem with the solution of which his reputation is bound up. A very strange confusion between the reception of miscellaneous information and the employment of regular and paid spies, leads the reviewer to an unsupported imputation on Pym of systematic *espionnage* in the modern obnoxious use of the word. Why the single appearance in history of an unfortunate tailor in the character of a voluntary informant should be gibbeted in connection with the equally voluntary and gossiping revelations of Lady Carlisle, we are unable to conceive. Scant justice is done to young Vane in the celebrated matter of the finding of the notes of Council which affected Strafford. A more careful perusal of the evidence of young Vane and his father's secretary would warrant a much more modified opinion, and open a case of casuistry in which an honourable man might well have gone astray. The fundamental error of the reviewer is in looking at everything from the supposition that Charles I. and Monarchy were convertible terms, and that what might be justly reasoned with respect to the latter was at all applicable to the repeated and unintermittent perfidy of the former. If Pym erred, Hyde and Falkland were certainly not right, and the question will, we are assured, ultimately resolve itself, not into a comparison between the merits of their respective policies, but into an independent estimate of the balance of merits and defects in Pym's statesmanship. That there was sometimes intimidation and violence on the part of the dominant party in the Long Parliament is only saying in other words that the period was a revolutionary one,—one in which there is constant difficulty in distinguishing the limits of independent individual action, and the right of self-preservation inherent in the dominant party. The way to a decision may be paved by general considerations, but it can only be properly arrived at by a subsequent examination of the special cases, not merely in respect to the immediate facts, but also with reference to the antecedents and actual position of the parties concerned. The article, however, is valuable independently of its literary merits, as exhibiting the view which the intelligent Conservative students of English history are now, with the light of fresh historical revelations, prepared to adopt with respect to this most controverted portion of our national story. The "Edinburgh" reviewer perhaps loses in comparison by occupying a less distinctly typical party position. He perhaps represents the Whig school of Hallam, modified in tone, but scarcely in essentials, by more accurate investigations and the progress of public opinion. We cannot agree with either writer in believing tha tthe attempt of Charles on the liberty of the five members was so unpremeditated as they suppose, and the reasoning on that point in the "Edinburgh" is the least satisfactory part of the article.

THE DUBLIN UNIVERSITY MAGAZINE. October. No. 334. Hurst and Blackett.

THE current number of this magazine is a fair average specimen of an intelligent and pleasantly written periodical; but it offers little subject for particular notice. We may, as a general criticism, say that its more prominent articles are deficient in vigour and concentration: this is especially the case with one on "American Agriculture." The writer holds his subject with so loose a grasp, and indulges in so many digressions, that but scant justice is done to its real interest and importance. The article upon "French and English Armaments" is better. It inquires into the comparative strength of the navies of the two nations, and corrects some misstatements contained in M. Clarigny's recent works. One of the best papers is a slight but telling sketch of St Ives in the fishing season, under the name of "Cornwall and Pilchards." The "Irish State Papers" is a gossipping, readable article,—a sort of collection of odds and ends of history from a newly-opened source.

The tales and lesser articles are fairly written; and the number concludes with a "Political Chorus," reviewing the past session. We are surprised, considering the usual tone of this magazine, to find that its writer looks upon our trust in the principles of free trade and individual effort as less patriotic than that employment of the working classes on artificially provided works, and the feeding them upon bread artificially cheapened, by which the Emperor of the French keeps his throne guarded from the tumultuous discontent of the working classes of Paris. That Louis Napoleon recognises the source of the most immediate danger to his Government, and provides against it the most ready remedies, proves him without doubt to be wise in his generation, but scarcely entitles him to the praise of giving "admirable proofs of earnest solicitude for the welfare of the lower orders."

MACMILLAN'S MAGAZINE FOR OCTOBER. Macmillan.

THIS is a fair number. "Tom Brown," as usual, is full of spirit and ability. There is an interesting paper on the curious Sacred Drama performed every ten years at Ammergau in the Tyrol; a very interesting paper on History and Casuistry by Mr Maurice, in the conclusions of which we cannot entirely concur; and a paper of no great novelty on Co-operative Societies, which is, however, useful and sound. There are also other papers of apparent interest which we have not examined.

THE ENGLISH WOMAN'S JOURNAL. No. 32. Vol. 6. W. Kent and Co., Paternoster row.

Two papers read at the Glasgow meeting of the Social Science Association take the prominent place in the October number of the "English Woman's Journal." The first, by Miss Parkes, gives an account of "A Year's Experience in Woman's Work," since the meeting of the preceding year at Bradford. It dwells upon the need of wider openings for educated female labour, particularly with regard to hospitals, reformatories, &c., and points out that one great obstacle to the employment of women in responsible posts in such establishments is their own deficiency in training. To remedy this, Miss Parkes calls upon the "men who control all our institutions in England for their co-operation in training women to act as officials in charitable and industrial, penal or reformatory establisments; "to give them the necessary opportunity of learning," to help women to help men; that so it may no longer be common for twenty educated women to apply in one day at our small office for "work whereby they could gain a livelihood," with ideas no more definite than that they do *not* want to be governesses. "They wanted to be something else, and we were to advise them."

Miss Emily Faithfull's report of the working of the Victoria Press is clear and business-like. It is interesting as showing the present prosperity and probable success of a new and courageous experiment. The remaining articles of this number are above the usual quality in variety and interest.

THE ART-JOURNAL. October, 1860. Arthur Hall, Virtue, and Co.

WE have in this number of the "Art-Journal" a fine engraving of Mignard's "Henrietta of Orleans," in which Charles the First's daughter is represented with her two children; it is in the old courtly style, giving great prominence to the magnificent and elaborate attire, which is carried to an extreme point in the children's dresses. Turner's beautiful picture of the "Opening of the Walhalla," first exhibited at the Academy in 1843, and a statue of "Medecine" by Ernst Hähnel, executed in 1847, form the subjects of the two remaining steel-engravings, while the wood-cuts give one or two of Mr Dyce's most interesting works, and illustrate the chapters on "The Hudson," "The Companion Guide in South Wales," and "Mediæval Manners."

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

Another week has passed away, and no new portion of the tariff to be imposed on English goods under the treaty has been published. This has caused some annoyance, inasmuch as it is a great object to commence to know as soon as possible the *regime* to which it is to be subjected. I have already informed you that the new tariff will, generally speaking, be moderate, more in fact than was to have been expected. Among other things it will, it is reported, fix the import duty on refined sugar at 41f the 100 kilogs, on agricultural implements and machines at 9f the 100 kilogs, and on pottery at 20 per cent. *ad valorem*. But this is only *on dit*.

A number of calico-printers of Rouen and Mulhouse have petitioned the Government to be allowed to import unbleached calico free of duty for printing, subject to the conditions of re-exporting it. A considerable number of leading firms of Paris have addressed a similar petition to the Minister of Commerce, and this document contains passages which are worthy of serious attention in England:—

The printed fabrics of France, although of a price much higher than similar articles of England, Switzerland, and Germany, are sold in the whole world, and *the sale would be immense* if the manufacture could be made in as good condition as in England. However, France is able to accomplish progress in the light and fine fabrics, especially in the new circumstances in which the manufacture thereof is about to be placed, and she will augment the sale of those articles, because the cost is not an obstacle so great to the sale of them as it is to the sale of printed calico, which is taken by consumers who are more exacting as regards cheapness.

The high price of unbleached calico in France for several years past has almost completely put an end to the sale for foreign markets of French printed calicoes, and whilst in England several hundred millions of francs worth are exported, in France only 3,000,000f or 4,000,000f worth are sold to send abroad.

We are often visited by foreign purchasers who do immense business in these articles in England, and who assure us *that they would make almost all their purchases* in France if the difference of price were only about 8 or 10 per cent.; and we believe that it would be very easy, if our manufacturers could at all times not exceed those prices, to arrive promptly at *an export at least ten times more considerable* than that which is made now. We can evidently only attain this by the privilege of introducing calico without any duty, and we should consider that measure as calculated to give a very great development to our trade. We, therefore, pray that the demand we make may be taken into immediate consideration.

The usual quarterly returns of the direct and indirect taxes have just been published. As regard the direct taxes, they show that out of a total of 479,343,000f due for the present year, 356,957,000f had been paid up to the 30th September last. This was more by 37,395,000f than could have been legally exacted by the Government, the direct taxes being only due by monthly instalments. At the corresponding date of last year, out of a total of 472,784,000f, the amount paid in advance was 33,162,000f. Moreover, the expense of law proceedings for arrears, which last year were at the rate of 1f 4c the 1,000f, have this year been 94c the 1,000f. These figures are satisfactory.

Indirect taxes are not so favourable. They show that the total amount received in the first nine months of the present year were 11,060,000f less than in the corresponding period of last year, and 24,046,000f less than in that of 1858. But the decline is almost exclusively owing to the falling off in the Customs revenue occasioned by the recent reforms, and to one in the manufacture of native (beetroot) sugar. On almost all other items there is an increase: that in wines, salt, and the post office is peculiarly satisfactory, inasmuch as it testifies to an improvement in the general welfare of the people; but it will be observed, not perhaps without regret, that the consumption of tobacco is continuing to increase in a really extraordinary manner. The following is a detailed account of the indirect taxes:—

	Nine Months of 1860.	1859.	1858.
	f	f	f
Registration and mortgage duties	223,771,000	196,891,000	216,203,000
Stamp duties	41,005,000	39,439,000	39,420,000
Customs Duties on Imports of: Grain	1,269,000	1,053,000	476,000
Different sorts of merchandise	58,230,000	50,979,000	50,478,000
French colonial sugar	24,849,002	35,112,000	42,093,300
Foreign sugar	16,248,000	25,107,000	18,739,600
Customs duties on exports	2,127,000	3,481,000	2,639,000
Navigation dues	3,302,000	3,238,000	2,798,000
Various Customs duties and receipts	1,352,000	1,413,000	2,954,000
Tax on the consumption of salt in the Customs districts	19,887,000	18,593,000	18,487,000
Duties on wine, &c.	129,491,000	123,493,000	121,313,000
Tax on the consumption of salt out of the Customs districts	6,474,000	5,891,000	5,340,000
Duty on the manufacture of native sugar	28,838,000	39,382,000	47,033,000
Various duties and receipts	41,851,000	38,129,000	36,171,000
Sale of tobacco	134,355,000	131,906,000	130,439,000
Sale of gunpowder	7,114,000	8,565,000	7,340,000
Post Office	41,670,000	40,840,000	38,257,000
Duty of 2 per cent. on money orders	1,262,000	1,361,000	1,209,000
Duty on the conveyance by the Post Office of bank notes, securities, and articles of value	328,000	57,000	...
Duty on the transit of foreign mails	759,000	819,000	733,000
Various receipts	32,000	12,000	18,000
Total	788,134,000	799,194,000	812,180,000

Apropos to the reduction in native sugar, I happen to have before me a table showing the progress which has been made in the production of that article in France during the last twenty-two years, and it may be useful to quote it:—

Years.	tons.	Years.	tons.
1838—39	39,200	1849—50	62,200
1839—40	22,700	1850—51	76,200
1840—41	26,900	1851—52	68,600
1841—42	31,200	1852-53	75,300
1842—43	30,600	1853—54	77,000
1843—44	28,700	1854—55	44,700
1844—45	36,500	1855—56	92,200
1845—56	40,500	1856—57	83,100
1846—47	53,800	1857—58	151,500
1847—48	64,300	1858—59	132,700
1848—49	38,600	1859—60	126,500

The average of the last three years is about equal to the import of foreign and colonial sugar, both for consumption and for refining for re-exportation. France now produces more beetroot sugar than any other country in Europe:—the average annual production of the Zollverein being 75,000 tons, of Austria 50,000, of Russia, 28,000, and of Belgium, 15,000.

The Credit Foncier is about to raise a loan of 37,500,000f, half of one of 75,000,000f which it was sometime back authorised to procure for the purpose of making advances to departments, communes, and syndical associations. It is to be in bonds of 500f, but for which only 445f are to be paid, and that in instalments in the course of the present and the ensuing year. The bonds are to bear 15f a year interest, running from the moment of subscription, not from the complete payment of calls; and in addition to being paid off at more than they cost, are to have the chance of obtaining, annually, prizes amounting to 300,000f—one of them being of 100,000f. The subscription commenced to-day, and it is not doubted that it will very soon be filled up.

An English Company has, it is stated, resolved to commence the working of some abandoned silver mines at La Croix, in the neighbourhood of St Dié, in this country. The working of them was given up some years back because it was not profitable; but the new Company possesses, it is said, new processes which will make it so.

The Mediterranean Railway Company announces the payment for the 2nd of next month of 20f per share on account of the dividend of the present year. The Eastern Railway will also, from the 1st of November, pay a similar sum on account.

The Great Russian Railway Company requires payment of a new call of 25 roubles (500f) per share between the 15th and 27th of next month.

The last monthly return of the Bank of France, of which some account was given in the last ECONOMIST, has excited more than usual attention from its presenting for the first time for many months a very large decline (very nearly 3,000,000*l* sterling) in the metallic reserve. Doubtless, as the ECONOMIST remarked, some of this money was required for the French armies in Syria and China; but the greater part has, it appears, been taken for purchases of grain abroad, and also for paying calls on foreign loans and other foreign enterprises in which the French have embarked. As the demand for money for further purchases of grain will continue, and as, too, large sums will be required for the loans of the Credit Foncier, the Comptoir d'Escompte, and for payment of calls in railway and other companies, also for the armies in China and Syria, a further reduction in the Bank cash in hand is looked for; and this will, of course, necessitate an increase in the rate of discount.

The Bourse never takes two days together the same view of the political situation, and the consequence is that prices rise or fall—only, however, to a moderate figure—according to the news brought by the telegraph. To-day there have been large sales and a fall in prices, owing to news from St Petersburg that the Russian Cabinet has broken off diplomatic relations with Sardinia, or at least is about to so. But the quotations of to-day, compared with those of last week, present only insignificant changes:—

	Thursday, Oct. 11.	Thursday, Oct. 18.

Annexed is the account of the markets:—

FLOUR at *Paris*, yesterday, was at 60f to 64f the sack of 159 kilogs; four marks current month, 61f 50c; November, 61f 25c. The two latter present a decline on last week's quotations, but after the close of the

market prices were firmer. A sale by auction of all sorts of flour was effected to the extent of 2,745 sacks at 58f 25c to 62f 75c.

WHEAT at *Paris*, yesterday, was 36f to 38f 50c the sack of 120 kilogs,—the latter an advance on last week's prices. Of the provincial markets, as many as 117 present a rise varying from 11c to 2f 48c the hectolitre, and only 13 a fall of from 17c to 1f 50c. 25 other markets are reported firm, and 14 without variation.

COTTON.—At *Havre*, in the week ending Friday, business was active, the total sales being 15,781 bales. Prices left off 1f higher for very low Mobile and Georgia, and for low of all other sorts; other qualities remaining unchanged. Low New Orleans was consequently 86f the 50 kilogs, whilst very ordinary ditto remained at 94f. The arrivals were 2,844 bales. This week, business has been animated, and prices have advanced: yesterday low New Orleans was 87f to 88f.

SUGAR.—Business at *Havre* was rather active last week, especially in the latter part of it. 1,930 casks French West India went at 49f and 49f 50c the 50 kilogs; a small lot of ditto, 52f; 2,910 bales Reunion disposable, 52f 50c; and 10,800 bales for delivery, 52f and 52f 50c; 618 casks Porto Rico, 49f duty paid; 872 casks Havana, 38f 50c in bond. Some lots of damaged Havana were also sold. The arrivals were 1,800 casks. This week, sales have not been numerous: French West India, 49f 50c. At *Bordeaux*, last week, business was calm: about 100 bales Reunion, at 51f 50c to 52f; 436 casks French West India, 47f 25c to 48f duty paid; 1,600 bales Mauritius, 53f. In Havana nothing important. Some lots of damaged French West India were also sold. This week, various lots of French West India have been sold at 48f 25c, and a large quantity of Reunion at 50f 70c to 52f 65c. At *Nantes*, last week, business was important: 2,623 casks French West India, 48f and 48f 50c; 9,717 sacks Reunion, 51f 50c; 9,670 sacks Mauritius, 52f 50c. This week, a large quantity of Reunion has been sold at 25c above prices previously established; some lots of French West India, at 48f and 48f 50c.

COFFEE,—The demand at *Havre*, in the week ending Friday, was regular. 1,100 sacks Hayti Port-au-Prince, disposable, 78f to 81f the 50 kilogs; 737 ditto for delivery, 79f 50c; 850 sacks Gonaives, 82f to 84f; 590 sacks Cape for delivery, 82f; 65 sacks Rio not washed, disposable, 76f 50c; 487 ditto for delivery, 77f 50c; 302 sacks Rio washed, disposable, 83f; and 571 ditto expected, 87f 50c. Various lots of different sorts of damaged were also sold. The arrivals exceeded 3,000 sacks. This week, business has not been very active: Malabar, 112f; Gonaives, 83f; Rio, 77f 50c. At *Bordeaux*, last week, business was calm. 270 sacks Guayra *grages*, 95f; and some small lots of Santiago, Malabar, and Bahia were alone sold. No sales have been made this week. At *Nantes*, last week, a small lot of Reunion *fere pointue* went at 131f 25c; and this week nothing has been done. At *Marseilles*, last week, 580 sacks Hayti went at 80f in bond; 2,000 Guayra, 88f to 94f; 6,500 Maracaibo, 80f; 2,500 sacks Rio washed, 86f: 1,000 Rio not washed, 73f to 79f; a small lot of Mocha, 115f.

INDIGO.—At *Havre*, in the week ending Friday, the quarterly sale at London produced no effect; the sales were about 50 cases Bengal at prices kept secret, and the arrivals were 15 cases from Bombay. This week, 67 cases Bengal have been sold at prices not stated. At *Bordeaux*, last week, 24 cases Bengal, 5 Kurpah, 11 Madras were sold: prices not stated. This week 15 cases Bengal have been disposed of: prices not given.

HIDES.—The sales at *Havre*, in the week ending Friday, consisted of: 160 Monte Video dry, 135f the 50 kilogs duty paid; 650 Rio Grande dry, 122f 50c; 600 Pernambuco drysalted, 96f; 1,386 Valparaiso dry and drysalted, 102f 50c to 115f; 1,250 New York salted, 55f 75c to 56f; 2,128 horse salted La Plata, 98f to 102f 50c the 100 kilogs. The arrivals exceeded 24,000. This week sales have not been numerous: Monte Video dry, 84f duty paid; Minas dry, 122f.

WOOL.—At *Havre*, in the week ending Friday, the sole sales were 23 bales La Plata unwashed at 1f 62½c to 2f 55c the kilog; 4 bales Peru unwashed, 2f 80c. The arrivals were about 200 bales. The sales at *Havre*, this week, have not been large: Buenos Ayres unwashed, 2f 25c to 2f 30c duty paid; German unwashed, 6f 50c.

TALLOW.—The sales at *Havre*, in the week ending Friday, consisted of about 50 casks at 69f the 50 kilogs duty paid. There were no arrivals. This week, a small lot of New York has been sold at 71f duty paid. At *Paris*, yesterday, the 100 kilogs were 147f 25c, a rise of not less than 5f on last week's quotations.

Correspondence.

THE GRAND TRUNK RAILWAY OF CANADA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The unfortunate holders of the shares and bonds of the Grand Trunk Railway of Canada will be pleased to observe that the ECONOMIST is taking notice of their pitiful case; and they, doubtless, look forward with great interest to the promised suggestions for the improvement of their position.

From the remarks in your last impression, however, it would seem that, in common with the British public generally, you are unaware of the causes of the great disappointment with regard to the traffic on this line. These causes are patent to any one acquainted with the geographical position of the railway; and, so far from the present condition of the Company's affairs being a matter of surprise to Canadians, I may safely state that no other result has ever been anticipated by any one who has given the subject his attention.

Briefly, then, the splendid water communication running parallel to the Grand Trunk is, and always will be, in our time at least, an insurmountable obstacle to the line's obtaining a paying traffic during the months of open navigation. On this point the last report issued by the Company is candid enough. During the winter months the Atlantic terminus of the Grand Trunk is at Portland, a circumstance which would tell greatly against the line in its competition with others which carry to New York, even if the mileage from the West were equal. New York is not only in itself an immense consuming market, having a population of nearly a million, but its enormous shipping gives it a very great advantage over every other port for the consignment of Western produce. But it is the relatively great mileage of the Grand Trunk which renders it unable to compete successfully with its many rivals for the thorough traffic between the West and the East; and on this point the public has been greatly misled by the official reports.

From Detroit—the most favourable point for the Grand Trunk—to Portland, the distance is one-third greater than by other routes to New York. Between that point and Boston the Grand Trunk is at an equal disadvantage. From Cincinnati to Portland the distance is 1,150 miles; to Baltimore, the nearest Atlantic port, it is only 580 miles of railway, being just one-half. Yet I find by Cincinnati newspapers that the Grand Trunk agents are again seeking freight from that place to Europe *via* Portland, to be carried during the winter. Can any one believe that it will be carried at a profit to the Company?

In the recent convention of the competing American lines, it was agreed that the Grand Trunk was to be permitted to carry goods from the West to Portland at the same rates as other lines carried to the Atlantic. It remains to be seen whether the shareholders will grant the same permission when they come to calculate the cost, for it must not be forgotten that the difference of mileage tells doubly against the Grand Trunk, from the fact of there being little or no "back loading" westward.

I should encroach too much on your space were I to give my views more fully on the undertaking in question. For these remarks I trust that you will find room, as it must be of importance to your readers to know as much as possible of a concern in which fifteen millions of British capital has been sunk.—I am, Sir, your obedient servant,

October 9, 1860. A CANADIAN.

COMMERCIAL AND MISCELLANEOUS NEWS.

—Advices from Sydney are to August 21. The Commercial Banking Company had declared a dividend at the rate of 15 per cent. per annum, and the Australian Joint Stock Bank at the rate of 10 per cent. The news from the Kiandra diggings is favourable, though the weather was still severe. The gold escorts brought down 24,562 oz in July. Trade generally was very inactive. The dates from Adelaide, South Australia, reach to the 25th. Trade in every department is represented as being extremely dull. Copper remained firm at 98*l* per ton. The price of Burra Burra shares was 147*l*.

We have advices from Calcutta to the 8th ult. One report says:—There has been a little more activity in the produce market, and stocks continue moderate. Sugar, firm; saltpetre, higher; rice, firm; silk, held for higher prices; corahs, steady; shellac, in demand at an advance; lac dye, dull; hides, improving; jute, new crop, high; gunnies, in demand; oil seeds, dearer. The last week of the past fortnight has been marked by a general improvement in the leading articles of our imports, viz., in piece goods, which have been sold freely, and considerable transactions have been effected at higher prices. The cause of this improvement is a demand from some of the lower Bengal markets, and as sellers have shown a good inclination to realise, the demand generally speaking is slacker during these last two or three days, with less disposition on the part of sellers to operate at the last advance of prices. Adding to this the unfavourable accounts from the up-country markets, we must say the position of the market is rather dull. Yarns have shared fully in the advance of prices, with a fair demand and consumption. Metals extremely quiet, at nominal rates.

The New York accounts describe increasing ease in the money market. The last letters from this side had given a new impulse to the wheat and flour market, and large quantities were being pushed forward. The returns had been published of the trade of the port of New York for the first nine months of 1860. According to these the exports of specie had been 8,470,000*l* against 14,600,000*l* in the same period of 1859, showing a diminution of 3,130,000*l*, the importation of foreign goods having also diminished 2,650,000*l*, or from 39,550,000*l* in 1859 to 36,900,000*l* in 1860, while the exports of domestic produce presented an increase of 4,100,000*l*. The country, therefore, must have gained an accession of wealth sufficient to account for the animation in the New York stock market. From California the gold receipts in the nine months had been only 5,084,000*l*, against 5,850,000*l* in 1859.

The following report shows the state of the Albany lumber market to the 19th ult.:—The quantity of lumber coming into the market during the week has been comparatively light, and will so continue for the remainder of the season, as the shipments by the long routes will be entirely suspended, and only that near the market will be forwarded in limited quantities. The stock on hand is ample, though the assortment is becoming broken. Spruce, hemlock, walnut, and some kinds of white wood, are scarce, and it will be impossible to get in a full supply this year. The sales have been large at advancing prices. The shipments during the week have been extensive, as the South winds of Friday and Saturday brought a large fleet of vessels up the river. All have obtained freights at high rates, and many more are wanted to carry off lumber already sold, and to meet the wants of buyers now in market. The receipts by the Erie and Champlain canals, during the second week in September, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1858	7242594	1470	762	9561900
1859	13058000	1785	750	8511000
1860	8847000	1281	...	7859000

The figures for boards and scantling during the week show a large diminution when compared with the corresponding week last year. The receipts by the Champlain canal were very light, being only 1,473,000 M., while the receipts of the Erie canal were 7,374,000 M. The receipts by the Erie and Champlain canals, from the opening of navigation to September 15, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1858	180098963	21168	84921	101394342
1859	202358762	36608	59743	93560503
1860	218379000	34582	31959	92924977

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month and of the corresponding period in 1959 are added :—

The latest advices from Jamaica state that sales of coffee had been effected at 44s per 100 lbs for very good quality. Very little pimento at market, and sold at 2½l per lb. At St Lucia the weather was excellent, the growing crops being much improved by the continued showers, and should they last, an abundant crop may be looked for next season. From Demerara, the exports for the fortnight had been—Sugar, 2,327 hhds, 93 tierces, 1,255 barrels, and 620 bags; rum, 894 puncheons, 101 hhds, and 44 barrels; molasses, 31 puncheons; timber, 40,733 feet; cocoa-nuts, 57,176.

The usual comparative statement of the number and tonnage of ships, both British and foreign, entered inwards and cleared outwards with cargo, from and to places within the limits of the East India Company's charter, has just been published, embracing the period from the 1st of January to the 30th of September, 1859 and 1860. The vessels entered inwards have, as far as the port of London is concerned, exhibited an increase of 30 vessels, and a decrease of 29,995 tons, the difference between 645 vessels with a capacity of 437,594 tons in 1859, and 675 vessels with a capacity of 407,596 tons in 1860. In the case of the port of Liverpool, the arrivals represent 202 vessels with a capacity of 188,124 tons in 1859, against 225 vessels with a capacity of 188,842 tons in 1860, or an increase of 23 vessels and 718 tons. The figures for Bristol exhibit a decrease of 5 vessels and 2,905 tons, the difference between 20 vessels with a capacity of 9,660 tons, and 15 vessels with a capacity of 6,755 tons. The return from the Clyde presents a decrease of 10 vessels and 4,407 tons, the arrivals in 1859 having been 18 vessels with a capacity of 9,314 tons, and in 1860 8 vessels with a capacity of 4,907 tons. According to these figures the net increase represents 38 vessels, but at the same time a decrease has taken place to the extent of 36,592 tons, the arrivals having augmented from China, Singapore, and the Cape of Good Hope, though, through the employment of smaller vessels, the tonnage has diminished. The statistics of vessels cleared outwards show an increase in the case of the port of London of 2 vessels and 7,427 tons, the difference between 637 vessels with a capacity of 415,661 tons in 1859, and 639 vessels with a capacity of 423,088 tons in 1860. Liverpool figures for an increase of 66 vessels and 78,041 tons, the difference between 374 vessels with a capacity of 319,617 tons in 1859, and 440 vessels with a capacity of 397,651 tons in 1860. The trade of Bristol during either period seems to have been limited, and was confined in 1859 to 2 vessels with capacity of 1,448 tons, and in 1860 to 2 vessels with a capacity of 1,385 tons, showing a decrease in the latter item of 63 tons. From the Clyde the return shows, in 1859, 82 vessels with a capacity of 53,834 tons, and 77 vessels with a capacity of 46,326 tons in 1860, the difference being a decrease of 5 vessels and 7,508 tons. The total increase under these circumstances of the clearances outwards is 63 vessels and 77,897 tons, the difference between 1,095 vessels with a capacity of 790,560 tons, and 1,158 vessels with a capacity of 868,457 tons. The principal augmentation has been in departures for Calcutta, China, the Cape of Good Hope, and Ceylon.

Under a moderately active demand for this staple the market remains steady, and the firmness which was manifested by holders at the date of our previous writing continues. The transactions have been to a fair extent, both for consumption and shipment, comprising 8,000 bales, including 1,200 good middling Orleans, in transit to Liverpool, at 11¼c to 11⅜c, with 5d freight, the market closing steadily at the annexed rates. We quote :—

New York Classification.

In the early part of this week there was a slight wavering in the cotton market, and prices were not more than steady; but on the receipt of American reports of had weather the demand rallied, and the trade and speculators have again bought freely during the last few days. Prices have also materially improved, and most of our quotations for American have been raised ¼d per lb. Egyptian of medium quality have advanced ¼d per lb, having attracted the notice of speculators. Other grades have not improved. Brazils are now in small compass, and are held for higher rates. East India are 1-16d per lb higher. The sales to-day are 12,000 bales; a firm market. The reported export amounts to 11,770 bales, consisting of 6,050 American, 180 Brazil, and 5,540 East India.

Rest	3,122,583	Other Securities	19,294,037
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	3,254,109	Notes	6,503,585
Other Deposits	14,344,869	Gold and Silver Coin	772,026
Seven Day and other Bills	785,360		
	36,059,921		36,059,921

Dated the 18th October, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,569,885	Securities	28,706,310
Public Deposits	3,254,109	Coin and Bullion	14,585,136
Private Deposits	14,344,869		
	40,168,863		43,291,446

The balance of Assets above Liabilities being 3,122,583*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£456,949
A DECREASE of Public Deposits of	3,229,835
An INCREASE of Other Deposits of	1,513,098
A DECREASE of Government Securities of	173,187
A DECREASE of Other Securities of	228,558
A DECREASE of Bullion of	840,477
An INCREASE of Rest of	39,566
A DECREASE of Reserve of	1,271,697

The present Bank returns are unfavourable, but not more so than had been anticipated from the withdrawal of gold for the Continent and the payment of the dividends. The decrease in the Government and other securities may be attributed to the return of the advances lent during the period of the shutting.

The reserve, although it presents a falling off of 1,271,697*l*, still stands at 7,275,611*l*, which the Bank evidently considers sufficient against public and private deposits of 17,598,979*l*; and this accounts for no alteration being made in the rate of discount, although the bullion shows a falling off of 840,477*l*, or 1,646,984*l* since the 12th September.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,523,702	£ 21,052,315	£ 22,385,630	£ 23,427,831	£ 22,569,885
Public deposits	6,284,496	4,833,021	5,561,558	5,491,051	3,254,109
Other deposits	9,550,613	11,132,431	13,808,344	14,014,448	14,344,869
Government securities	14,228,901	10,254,541	10,809,467	10,875,157	9,490,273
Other securities	10,772,345	20,539,565	14,813,120	18,324,730	19,294,037

Coin and bullion	16,015,105	9,524,478	19,276,560	16,929,713	14,585,136
Bank rate of discount	2½ p. c.	8 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	97⅞	88¾	98¼	96	93
Average price of wheat	39s 10d	55s 10d	42s 4d	42s 6d	61s 1d
Exchange on Paris (short)	25 17½ 22½	25 25 30	25 10 15	25 10 15	25 15 22½
— Amsterdam ditto	11 15 18½	11 15 16	11 15	11 14½ 14¾	11 14¾ ⅝
— Hamburg (3 months)	13 10 12	13 10¼	13 7 7½	13 5½ 5⅝	13 5½ 6½

In 1850, although money was low, a demand was beginning to arise in consequence of the expansion of trade, and good bills could not be negotiated under 2⅜ to 2½ per cent. The Bank of England were selling Exchequer Bills, and a large demand for silver for exportation for the East was taking place. Consols, however, still bore the high price of 97½.

In 1857, a great sensation had been occasioned by the rise (on Monday, Oct. 19) of the Bank minimum from 7 to 8 per cent. The Bank of France had advanced their terms from 6½ to 7½, and at Hamburg no money was obtainable below 9½ per cent. Specie was flowing to the United States, where the exchange on London had fallen to 100 per cent. The panic there, however, had not yet extended to this country. The funds were very low under the weight of an immense amount of stock pressed on the market by bankers; but a rally was commencing, in consequence of the large absorption by the public.

In 1858, the French 3 per Cent. Rentes, though somewhat prejudiced by the Imperial dictation at Lisbon, commanded 73¼, Consols 98½, the new Turkish loan 1¼ premium (on 80), and the Indian 4 per Cent. debentures 99¾. Bills were negotiated in Lombard street as low as 2⅛ to 2¼ per cent., although the Bank rate was 3.

In 1859, money was very abundant, being in Lombard street ¼ per cent. under the Bank rate of 2½. Large shipments of specie had been resumed to the East, and the instalments on the Indian and Russian loans were in progress, railway shares evinced great buoyancy.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,221,932*l*; in 1857, a deficiency of 9,407,134*l*; in 1858, a deficiency of 1,006,774*l*; and in 1859, a deficiency of 4,310,282*l*. In 1860, the deficiency is 5,237,726*l*.

DISCOUNT AND MONEY MARKET.—The large exportations of bullion to France and Spain caused considerable excitement in the money market, the more especially as it is known that the demand still continues, and the general expectation was that the Bank of England would raise the rate of discount, and, as a matter of course, every one was anxious to be provided prior to the Bank raising the rate. The consequence was a very heavy demand for discount at the Bank of England prior to Thursday; but when the Bank Court broke up without raising the rate, money became very abundant, and loans at short dates and bills not having more than a few days to run have been negotiated to-day at 3½ per cent., although 4 per cent. is the price for short-dated paper. In the Stock Exchange money, which in the early part of the week was 3½ to 4 per cent., has been freely lent to-day at 2½ per cent. These fluctuations indicate a great uncertainty in the minds of the monied world. The question is, whether the exportations of bullion will continue, and to what extent? At present there exists a very active demand for the Continent and for the East. It is true the state of the Exchanges do not admit of gold being sent to the Continent; but it is equally true that some one is buying gold at a premium, and while this continues we may see gold withdrawn from the Bank. In well-informed circles it is generally believed that this irregular purchaser is the Bank of France. Under these circumstances the discount houses are acting with the greatest caution. The rate of money on call in Lombard street is 3 per cent., and 3½ at seven days' notice. The demand for discount at the Bank to-day has been moderate, and no gold has been taken for export.

The following are the rates of discount at

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3½	3
Hamburg	No Bank rate	2½
Brussels	3	3
Frankfort	2	1½
London	4	3¾
St Petersburg	5	5½
Vienna	5½	5½

ENGLISH FUNDS.—Very little business has been transacted in the funds this week, the fluctuation not exceeding ¼ per cent. during the week. Consols have been 92½ ⅝ for money, and 92¾ for the account, but have since rallied to 92¾ ⅞ for money, and 92⅞ 3 for the account, at which price they close. Exchequer Bills par to 3 premium, 3 per Cent. Reduced 91¼ ¾, and New 3 per Cent. 91¼ ⅜.

FOREIGN FUNDS.—At the meeting of New Granada bondholders, the new arrangement for a settlement of the foreign debt of the Republic, on the terms and conditions proposed by the Government, were not considered sufficiently liberal, and a Committee of six bondholders was appointed to confer with the Committee of Spanish American bondholders, with the view to suggest what modification or change in the terms may be deemed by them acceptable, and to enter direct into negotiations, and to arrange an agreement with Senor Martin, the representative of the New Granada Government.

Turkish Bonds have been depressed, it being evident that a

financial crisis cannot be much longer deferred. The Grand Vizier is, it is stated, about to visit England and France in order to obtain a loan, and also their sanction to a modification of the present Customs duties levied in Turkey, which is uniform at 5 per cent. It is thought that if foreign Powers would allow Turkey to raise the duties to 10 per cent., she might abolish, or considerably lower, the export duties she levies of 12 per cent., especially on cotton and grain, which virtually prohibits their cultivation and exportation. An idea prevailed some time since, when Turkey applied for assistance to England and France, to appoint a Commission to examine thoroughly into the financial position of Turkey, and to report the result, with a view of endeavouring to place the finances of Turkey on a firm basis. The closing prices this afternoon are 69¼ to ¾, and 53¾ 4¼ for the loan of 1858. Mexican Bonds have during the week risen to 23, but have since receded to 22⅝, on it being ascertained that the remittance for the dividends has not as yet left Mexico.

In other foreign funds the prices show but little fluctuation. French funds opened this morning at 68.75, and close 68.95.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

BULLION.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes:—

Gold.—We have to announce the following arrivals since our circular of 11th inst.:—The Bremen, from the United States, with 34,000*l*; the Europa, from ditto, with 20,000*l*; the Edinburgh, from ditto, with 3,400*l*; the Atrato, from the West Indies, with 25,000*l*; the Armenian, from Africa, with 20,000*l*; the Orwell, from Melbourne, with 151,500*l*; total, 253,900*l*. The whole of the above has been taken for export, and the continental demand still continues active. The Shannon, for the West Indies, had 9,500*l* on board, chiefly in gold. 212,000*l* has been withdrawn from the Bank of England. The following vessels have sailed from Melbourne:—The Red Jacket, sailed 17th July, with 152,000*l*; the Swiftsure, sailed 11th August, with 282,000*l*; the Water Nymph, sailed 23d August, with 321,000*l*; total, 755,000*l*, of which the 152,000*l* per Red Jacket may be considered as due. The Sussex and Anglesea were also loading at Melbourne, and would doubtless bring a considerable quantity of gold.

Silver.—The arrivals since 11th instant, have been the Atrato, from the West Indies, with 67,500*l*; the Tagus, from Lisbon, with 2,700*l*. The bar silver per Atrato has been sold this day at 5s 1⅜d per ounce standard, and our market is firm at this quotation. The West India steamer, due at Southampton on 28th instant, is expected to bring a considerable amount in silver and dollars.

Mexican Dollars.—The price of Mexican dollars is 5s 2d per ounce. Some amount, however, still remains on hand, for which holders asked, up to a late hour this afternoon, 5s 2⅛d. The shipments per Peninsular and Oriental Company's steamer Ceylon, which leaves Southampton on 20th instant, will be very considerable. It is stated that Government will remit 250,000*l* in Mexican dollars.

Exchange on India is firmer. The Oriental Bank has this day raised its drawing rates to 2s 0⅛d sixty days' sight. We quote rates 1s 11⅞d to 2s 0⅛d for Banks' sixty days' sight drafts on Bombay and Calcutta; bills with documents, 1s 11⅛d; Madras Bank drafts, 1s 11⅞d to 2s.

India Government loan notes are very dull, and are lower than at the date of our last. We quote 5 per Cents. 96, 5½ per Cents. 102, and these prices are nominal.

Quotations for Bullion.—Gold—Bar gold, 77s 9¾d per oz std; bar gold, fine, 77s 9¾d per oz std; bar gold refinable, 78s per oz std; Spanish doubloons, 76s 3d to 76s 6d per oz, last price; South American doubloons, 74s 6d per oz, last price; United States gold coin, 76s 4d per oz, last price. Silver—Bar silver, 5s 1⅞d per oz std; bar silver, containing 5 grs gold, 5s 2d per oz std, last price; fine cake silver, 5s 6⅛d per oz, last price Mexican dollars, 5s 2d to per oz; Spanish dollars (Carolus), 6s 2d per oz, last price.

FAILURES.—The accounts from Leeds mention that the creditors of Mr Jos. Hartley, manufacturer, of Calverley, have received a circular announcing his inability to meet his engagements. Mr Hartley has done considerable trade as a country manufacturer. His liabilities it is rumoured will be about 12,000*l*.

At a meeting of the creditors of Mr Samuel Harris, merchant, of Leicester, trading in partnership with Mr Nathaniel Harris, of Melbourne, it was stated that the total of liabilities expected to rank against the estate is 95,754*l* 15s 6d. The total assets are set down at 62,034*l*, of which nearly the whole, viz., 60,000*l*, is expected to be derived from the assignments to Australia. The total shipments of goods to that quarter from August, 1858, to September, 1860, appear to have reached 280,858*l*. The house in Melbourne is in difficulties, and has sent home a statement of its affairs made up to the 30th of June last, which places its liabilities at 59,000*l*., and its assets at 52,000*l*. The London accountant, however, makes out a very different statement, estimating the liabilities at 82,000*l* (of which 52,000*l* is due to the London house), and the assets at only 46,000*l*. The deficiency of the colonial firm would therefore appear to be as much as 36,000*l*. It was resolved to wind up the estate under a deed of assignment.

At a meeting of the creditors of Mr A. Allan, miller and flour factor, of King's cross, a balance sheet was presented by Mr Coleman, the accountant, stating the liabilities at 16,785*l*, and the assets at 9,191*l*. It was agreed to accept a composition of 10s in the pound, payable in instalments—the last, of 1s, to be secured in July next.

The whole of the extensive and varied stock of Mr J. H. Smith, tanner and leather merchant, of Bermondsey, a bankrupt, has just been purchased, in one lot, of the assignees, at a valuation, by Messrs Hooper and Maunder, of Rood lane. The stock of Messrs Streatfeild and Co, has been nearly cleared out.

At a meeting of the creditors of Messrs Henry Brooks and Co., it was resolved unanimously to accept the offer of a composition of 15s in the pound, payable by six instalments of 2s 6d each, at four, eight, twelve, sixteen, twenty, and twenty-four months. In case of any defalcations the whole

amount to become due; the business being carried on under the superintendence of the committee, Messrs Sheffield, Brown, and Curtis. It was stated to be very doubtful whether the securities held by Scott and Co., the bankers, would more than cover their claim. The liabilities corrected amounted to 38,921*l* 11s, the assets being 32,314*l* 19s. Several of the principal creditors expressed their confidence in Mr Brooks, who, they had no doubt, would fully carry out his obligations.

The accounts from Sydney report the stoppage of Messrs Furlong and Kennedy, Mr H. A. Cobb, and Mr A. Chandler. The first mentioned firm are millers, and the two latter storekeepers. The liabilities in each case were below 15,000*l*.

A letter from Hobart Town, dated 22nd August, mentions the absconding of an ex-officer of the late Quartz Crushing Company at Fingal, leaving debts estimated at 40,000*l*, and forged endorsements of bills to the amount of 7,000*l*.

A report, circulated some few days ago, that a bank director had absconded from Havana with money to the extent of a quarter of a million sterling, is now confirmed. An insurance company in Spain is the largest sufferer.

MISCELLANEOUS.—The report of the Directors of the Great Ship Company states that the consignees at New York have remitted 14,000*l*, but have not yet furnished the accounts. 190,000 persons had visited the ship in America. It is estimated that the trial voyage to America and back has been effected out of the moneys received from passengers and visitors, without trenching on the capital of the Company. Heavy outstanding claims, not contracted by the present Board, still remain unsettled; and 18,000*l* presents itself in the award of the arbitrators, in the suit against Mr Scott Russell. They are advised that the award cannot legally be maintained, and have appealed against it. Legal proceedings have been taken against the Company during the administration of former Directors, upon a claim of Mr Parry for 5,876*l* 6s 4d, which the Directors resist. To complete the ship, consistently with the requirements of the Board of Trade, will involve a very considerable outlay, probably not less than 15,000*l*. If the suit against Mr Russell had terminated in favour of the Company, nearly sufficient means would now be at their disposal, but if it should unfortunately happen that any portion of the award can be made good against the Company, then it will be necessary to obtain additional capital. The proprietors will, however, have a noble ship, perfect in all parts, and ready to proceed on any voyage in March next.

The Russian Minister of Finance, in addressing the representatives of the various imperial credit establishments, made the following remarks relative to the circumstances attending the negotiation in London of the Russian Three per Cent. loan of 1859:—

The loan of 12,000,000*l* sterling, contracted by the Government in March, 1859, with Messrs Thomson, Bonar, and Co., and Magnus, had for its primary object to increase the cash reserve applicable to the credit-billets in circulation. The subscription to this loan, interrupted by the war between Austria and France, was resumed in August, 1859; but as in the interval the prices of public securities had experienced in all the markets of Europe an extraordinary fall, which made the price of issue of the bonds of this loan seem too high, the Government, in order to prevent depreciation in the price, and consequent injury to the first subscribers, judged it advisable as soon as 7,000,000*l* had been placed, to reserve to itself the remaining balance, viz., 5,000,000*l*, and closed the subscription. I must not omit, upon this occasion, to render justice to the first contractors for that loan, who have taken all the means in their power to fulfil their obligations upon the most advantageous conditions for the public treasury.

Advices from Caracas, dated the 21st of September, state that a very serious question was pending between the Venezuelan Government and Spain and France, acting in conjunction, these Powers having demanded an indemnity for their respective subjects for losses sustained by acts of the Revolutionists.

It is stated that a special meeting of the Regent's Canal Company is about to be called to consider the expediency of applying to Parliament in the ensuing session for powers to make a railway along the line of the canal from Maiden lane to Limehouse, to be worked in conjunction with the canal.

Intelligence has been received from Madrid of the decease, after but a few hours' illness, of Mr O'Shea, the eminent banker there. Mr O'Shea had resided upwards of 50 years in Spain, and was greatly esteemed throughout both Spanish and English society in that country.

Mr Pollard, the late manager of the London Joint Stock Bank, was yesterday elected a director of that institution.

Advices from Melbourne by the present mail state that the long promised payment of the shareholders of the Geelong and Melbourne Railway will take place in full, with interest, next month. For the credit of the Government of the colony of Victoria, it is to be hoped this announcement will be realised.

We find the following in the commercial article of the *Manchester Guardian*:—

It is understood that the subscription list for the 200,000*l* 7 per Cent. Bonds of the Atlantic and Great Western (New York) Railway Company, recently advertised, is nearly filled, and that it will be closed in a few days. M. de Salamanca, the Spanish banker, is one of the contractors of this line.

Letters from Valparaiso state that, owing to the Chilian Government having determined to issue a new silver coinage, very little silver will be sent to this country for some months. Most of the silver received at Southampton by the West India packets comes from Chili, the supplies from Mexico consisting mostly of Mexican dollars.

A general association of the Chambers of Commerce of the United Kingdom has been established, and will shortly be in operation, with a head office and manager at Westminster. Its labours will be devoted to communicating to each separate Chamber every matter coming before Parliament affecting the interests of trade, and furnish copies of bills, Parliamentary returns, &c., relating to the same.

The question of the abolition of the Stade Dues seems at length to be on the eve of settlement. The sum proposed to be paid to Hanover is 460,000*l*, towards which England and Hamburg will supply 153,000*l* each. The remainder is to be contributed by Prussia, Holland, and the other States interested.

The second ordinary general meeting of the Atlantic Royal Mail Steam Navigation Company is called for the 1st November, and will be made extraordinary, to increase the capital from 500,000*l* to 1,100,000*l*, by the creation of new 6 per cent. preference shares of 10*l* each.

A meeting of the holders of Central American Bonds is convened by the Committee for Monday next, when certain propositions will be submitted which have been received from the Government of San Salvador, for the adjustment of that portion of the Central American debt.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about 4 per mille premium, and the short exchange on London is 25.17½ per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 4-10th per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 424½ per mark, and the short exchange on London is 13.4 per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109½ per cent., which, when compared with the Mint proportions between the two countries, shows that the exchange is about at par; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The show of English wheat at Mark lane, to-day, was very moderate, and, for the most part, in poor condition. The few fine samples on offer changed hands freely, at very full prices; but other qualities were a dull inquiry, at about previous rates. The amount of business doing in foreign wheat—the show of which was seasonably good—was by no means extensive; nevertheless, the quotations were well supported. Barley, malt, oats, beans, and peas, commanded quite late currencies. The transactions in flour were somewhat restricted. Moderate supplies of produce have come to hand from abroad, this week, viz., 13,830 quarters of wheat, 3,560 barley, 18,320 oats, 1,890 sacks and 8,390 barrels of flour.

At Liverpool, this morning, produce generally commanded rather more money, with a good consumptive demand.

Messrs Briggs and Co.'s grain circular of the 5th inst. reports the state of the grain trade at Alexandria as follows:—

Our grain market has been very firm, and generally with upward tendency in prices. The latest intelligence from England is considered exceedingly favourable, but it has hardly produced any further perceptible advance in the value of wheat or pulse, the chief cause of which appears to lie in the increasing scarcity of money. It will be noticed, however, that an exception must be made in favour of barley, which has risen to the extent of nearly 2s per quarter. The following are the sales since our last, with the present value free on board:—Wheat—Saide, private produce, 17,215 qrs, 35s 2d to 36s 4d; ditto, Pacha's, 1,250 qrs, 38s to 39s; Behira, private produce, 7,640 qrs, 33s 6d to 34s 6d; ditto, Pacha's, 3,438 qrs, 35s to 36s: beans—Saide, 6,000 qrs, 25s 9d to 26s 6d; ditto, Behira, 694 qrs, 24s to 24s 6d: barley, 1,730 qrs, 21s 6d to 22s 6d; lentils, private produce, 122 qrs, 25s; ditto, Pacha's, 750 qrs, 25s 6d to 26s; pease, 190 qrs, 26s; linseed, 820 qrs, 43s 6d to 44s per qr. Freights are firm at the following rates, namely:—To the United Kingdom for orders, 6s 9d to 7s 6d per qr for beans, and other grain and seed in proportion; to a direct port, 6s 3d to 6s 9d for beans, wheat, or other grain; to Liverpool, by steamer 8s, by sailing vessel 6s to 6s 6d. Exchange on London at three months' date, 96¾ to 96¾ piastres per £.

Accounts of a severe storm in the neighbourhood of New Orleans were received in Liverpool at the commencement of the present week, which gave a fresh stimulus to that market, and created some serious apprehensions as to injury likely to be sustained by the cotton crop; the prices in America being reported also ¼d dearer. The sales of the week in the Liverpool market have amounted to 78,000 bales, and include 55,000 bales to spinners, 17,000 bales to speculators, and 6,000 bales for export. Prices are about ⅛d per lb dearer than on Friday last. To-day the market closes steady: sales, 12,000 bales. It will be necessary to await further advices as to whether the storm will prove to have been only a repetition of that witnessed about six weeks previous, when the damage done did not reach the cotton plant.

The public sales of tea held this week have passed off somewhat steadily, and, in a few instances, green qualities have realised a slight advance. In the private market, the demand, generally, continues much restricted.

The annexed commercial report is dated Hong Kong, August 20:—

Tea.—Within the last few days 8 chops of Ningchow, of good quality, have arrived by circuitous routes, and we may probably receive a few more through the same channel. There have been no arrivals of Oopacks or Oonahma, in consequence of the rebels still occupying the passes, and it is very uncertain when further supplies may come forward. Transactions for the fortnight are as follows:—Congou, 2 chops, 1 Oopack at 34 taels; 1 Ningchow, at 28.2 taels—making a total of 72 chops to date, and leaving 7 chops Ningchow in stock. Tayahan and Canton packed, 3,000 half-chests, common to good, at 19 taels to 24½ taels. Scented orange pekoe, 14,000 boxes, fine to finest, 27 taele to 30 taels; medium to good, 23 taels to 26 taels; common, 18 taels; 21 taels; scented caper, 8,000 boxes, fine to finest, 26 taels to 29 taels. medium to good, 22 taels to 24 taels; common, 16 taels to 20 taels Gunpowder, Canton made, 1,000 boxes, at 18 taels to 25 taels. Pouchong 4,000 half-chests, at 15½ taels to 22 taels, for United States. Amoy advices are to the 21st inst. Tea.—Prices are fully maintained, with limited stocks of all kinds. Sales reported are as follows:—Oolong, 4,024 half-chests, at 21 dols to 27 dols. Congou, 480 cheats, at 17 dols to 23 dols 50c. Orange pekoe, 405 half-chests, at 14 dols 50c. Ankoi, 386 half-chests, 14 dols 50c. No vessel had been despatched. Foo-chow advices are to the 17th inst. Tea.—During the past fortnight a considerable business has been done. Prices of congou show a decline of 1 tael on previous rates. Other kinds remain as last quoted. Arrivals from the country have come down freely, being chiefly second crop of "medium and fair quality," rendering stocks heavier than at any previous period of the season. The chief purchases of congou are for England, some colonial orders also being under execution. In sonchong little has been done. The demand for Oolong has been moderate, and chiefly for America. Shanghai advices are to the 12th inst. Silk.—During the fortnight a large business had been done, settlements reaching 6,000 bales, making a total for the season of 14,000 bales. Arrivals had been large notwithstanding the capture and destruction of the city of Nantsin in the silk districts by the rebels. Prices show a decline of 10 taels on former quotations:—

Total export of silk from China to Europe is 11,517 bales, against 7,451 bales last year, or an increase for this season of 4,066 bales. Tea.—The communication with the tea districts is still interrupted, and only a few parcels of Hoochow growth have reached from Ningpo. Settlements during the fortnight amount to 3,800 chests of congou at 23 to 26½ taels duty paid. Greens—2,800 packages Ping Suey have arrived, *via* Ningpo. Sales during the fortnight amount to 5,900 packages, entirely of this description. Prices not yet known. Stock—Black, 5,800 chests of low quality; green, 4,500 packages, of which about 2,000 are new crop. Total export from China to Great Britain is 13,482,800 lbs, against last year 8,864,600 lbs, or an increase for this season of 4,618,200 lbs. To the United States the export is 3,834,300 lbs, against 2,371,600 lbs, or an increase for this season of 1,462,700 lbs.

For nearly all kinds of raw sugar, there has been rather more inquiry compared with last week. In prices, however, no quotable change has taken place. Floating cargoes of foreign have commanded previous rates. Refined goods have ruled firmer, to-day, at 49s 6d for common brown lumps. Wet lumps have realised 47s 6d to 48s per cwt.

No transactions of moment have taken place in the coffee market. Dealers mostly refrain from purchasing until the next public sales of native, which will be held on the 25th inst.

We have received the following report of the coffee trade at Ceylon from Messrs Volkart Brothers. It is dated Sept. 15:—

The disposal of the present season's crop to date stands thus:—

PLANTATION COFFEE.

To Great Britain	cwts 419,220	against last year,	cwts	340,381
Foreign Ports	30,391	—	—	38,995
Australia and India.....	10,870	—	—	7,515
	460,481			386,891

NATIVE COFFEE.

To Great Britain.....	cwts 85,143	against last year,	cwts	72,643
Foreign Ports.....	67,269	—	—	117,747
Australia and India.....	3,640	—	—	7,271
	156,052			197,661

The native crop of Ouvah coffee is now nearly all brought in. Samples of the new Kandy crop are on offer at prices between 43s and 45s for unpicked, according to quality, but as yet little business has been transacted, nor is there much offering. Plantation coffee is coming forward slowly, varying greatly in quality according to the district whence it arrives. Generally, the samples as yet to hand have proved inferior in size and growth. There is a good deal of parchment on offer, but buyers show no great disposition to operate. Labour is abundant in most districts, and the weather is now favourable for maturing the growing crops.

The following is the actual distribution of the crop:—

	Plantation. cwts.		Native. cwts.		Total. cwts.

There has been a good consumptive inquiry for most descriptions of rice, at prices fully equal to those current in the previous week. The total sales have amounted to nearly 70,000 bags. Advices from Rangoon to the 30th of August state that no vessels were loading rice for Europe. From the 1st of January to date the exports for the last three years compare as follows:—1858, 106,929 tons; 1859, 43,055; 1860, 32,720. From Akyab, we learn that rice has materially advanced in price, owing to the limited supplies on offer.

Valencia raisins have sold steadily, at from 34s to 35s per cwt. For currants and most other fruits the inquiry has somewhat improved, but without leading to any quotable change in value.

In reference to the indigo sales just concluded, Messrs Layton, Hulbert, and Co. observe:—

"Broken consuming Bengal, plant Oudes, and Oudes, forming a large proportion of the sale, have declined 3d to 6d per lb. Good Kurpahs brought nearly the rates of last sale, but the ordinary kinds are 3d to 6d lower. Dry-leaf Madras, now becoming scarce, realised an advance of 2d to 4d per lb. By far the greater proportion of the damaged Indigo, whether in the sales or by private contract, have been taken for French account; and a few purchases of sound Bengal and dry-leaf Madras are also destined for the French markets. Prices may be quoted as under:—Bengal, fine blue, 8s 2d to 8s 5d; ditto purple and violet, 7s 8d to 8s; ditto good, 7s 2d to 7s 6d; ditto middling and defective, 6s 10d to 7s 1d; ditto consuming fine, 6s 5d to 6s 9d; ditto consuming good, 5s 8d to 6s 4d; ditto consuming middling, 5s to 5s 6d; ditto consuming ordinary, 4s to 4s 10d: Oudes, good (plant), 3s 10d to 4s 9d; ditto middling, 3s to 3s 8d; ordinary, 2s to 2s 9d: Madras, velore, 4s 10d to 5s 4d; ditto middling, 3s 2d to 4s 2d; ditto ordinary, 1s 9d to 3s: Kurpah, fine, 6s to 7s 4d; ditto good, 5s to 5s 10d; ditto middling, 3s 8d to 4s 9d; ditto ordinary and low, 1s 4d to 3s 3d per lb. The quantity sold (including about 1,700 chests of the withdrawn parcels) is 6,500 chests, of which about 5,000 are for export and 1,500 for home use and re-sale. 1,600 chests remain bought in. The sales of Spanish indigo 1,420 serons, will take place on the 22nd instant.

Messrs Moran and Co., of Calcutta, writing on the 8th ult., thus allude to the state of the indigo trade:—

The manufacturing in Lower Bengal is now very nearly completed. In Tirhoot and Chuprah prospects are looking up, and the first manufacturing has closed with about 23,250 maunds from first cuttings. The Khoontie generally promise fairly, and will bring up the total outturn of the season to about 30,000 maunds. From the Benares districts the weather is reported favourable, but we have received very few estimates of outturns, and the same remark applies to the Doab. Exports of indigo from the 1st November, 1859, to the evening of the 6th current:—To Great Britain, 18,913 chests; Havre and Bordeaux, 5,186; foreign Europe, 64; America, 1,495; Gulf, &c., 1,751; sundry ports, 11; total, 27,420.

Russian hemp has continued to move off steadily, at 30*l* 5s to 30*l* 10s per ton for Petersburg clean. Manilla qualities have supported previous rates.

"We are happy to state," observes M. Arles Dufour, writing from Lyons on the 11th inst., "that the hopes expressed in our last have been realised. Orders for silk for America, placed in September, have produced a good activity, which those now arriving for the various European markets will tend to keep up for some time to come. Prices, however, have undergone but trifling fluctuations, and wages have had a sensible rise. In European as well as in Asiatic silk, the better descriptions are scarce, and kept very firm; the lower qualities are arriving in greater abundance, and are of less easy sale at the high rates actually ruling."

DELIVERIES of SILK through the LYONS CONDITION HOUSE.

From September 1 to 30, 1860	3,218	.....	244,000

Rum has sold freely, and brown Leewards, proof, has realised 1s 9d per gallon. Brandy is very inactive, at the late improvement in value. British spirit has advanced to 12s 3d per gallon.

Very little change has taken place in the quotations of wool or saltpetre. Linseed oil has sold at 31*l*, and other oils have continued steady. Turpentine has improved in value.

Though less excited than in the previous week, the tallow market has ruled very firm, and P. Y. C., on the spot, has advanced to 59s 3d per cwt. The quotation for all the year is 59s 6d; December only, 59s 6d; January to March, 59s 6d; March only, 59s 9d per cwt.

"Money matters," observes the New York *Shipping List* of the 6th inst., "have been influenced more or less by a feeling of uneasiness, but there is every indication of a recovery of the previous firm tone of the market. The stock-brokers experience no difficulty in obtained short loans at 7 per cent., while most descriptions of prime paper pass readily at the regular bank rate. We quote :—

	Per cent. per annum.
Loans on call, stock securities	7 to :.
Do. other good securities	7 8
Prime endorsed bills, 60 to 90 days	6½ 7
Do. 4 to 6 months	6½ 7½
First class single signatures	8 8½
Other good bills	9 10
Names less known	12 20

The market for domestic goods maintains the buoyancy which has characterised it during the past two months, and holders continue to evince considerable firmness in their operations. There is but little doing with the Southern States, and business with that section may be said to have been finished up. With the West, however, trade is still comparatively active, and from present indications it will continue fair all through the fall and winter months. The market for goods of foreign importation remains without remarkable change. A steady fair demand prevails for favourite styles and fabrics, for which satisfactory prices are obtained. The auction sales have interfered somewhat with the regular trade, and a considerable amount of the less desirable manufactures have found purchasers through this medium, though for the most part at less remunerative prices than would have been accepted at private sale."

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to Sept. 30, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

MARKETS IN THE MANUFACTURING DISTRICTS.

There has been only a moderate demand for cotton goods, this week, for shipment to India and China; nevertheless, no change has taken place in the quotations. For the Continent, as well as for the United States, a fair business is doing in most manufactured articles; whilst the demand for home use continues very active. The stocks in warehouse are still small for the time of year. In the iron districts, there has been no particular movement; but the demand for coals has ruled brisk, at further advanced rates. Large quantities continue to be disposed of for export purposes.

MANCHESTER, Oct. 18.—There has been comparatively little done since Monday. Sellers, being well engaged to order, and influenced by the active cotton market, have held very firmly for extreme prices; buyers, on the other hand, being somewhat disappointed with the yet indecisive intelligence from the Peiho, as well as with the low rates at which sales were still passing at Calcutta, have shown no great desire to pay full rates here. The unfavourable weather has also had some share in restraining business, but since the announcement of there being no change in the Bank rate, there have been signs of a few operations where the terms lately current could be accepted.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

BRADFORD.—We cannot report any improvement in the wool market. Operations are on a limited scale. Orders being scarce, buyers need but little, and buy only what they need. The demand for yarns is slack, and comparatively few orders are being given out. In prices there is no change. There has been another dull market for pieces. Manufacturers are fast curtailing their production, being unable to sell at prices to cover cost.

ROCHDALE.—The market is much the same as last week. Little business has been done in the market, but producers report increased and pressing inquiries by post, especially for Lancashires. There is, indeed, very little probability of a decrease in the production, for scarcely a third of the offers made are accepted, and yet there are so many orders on hand that work is assured for a good way into the winter. Prices are without alteration.

LEEDS.—We have had a rather quiet market. There was only a moderate attendance of merchants in the halls, and the transactions were kept within a very moderate compass.

HUDDERSFIELD.—The country trade continues active. Few shippers have been in the market, but their purchases have been restricted to a few better class goods. There has been no inquiry for unions and low woollens, which are usually required for shipping purposes. In the local wool market there is no change to report. Prices continue easy, and transactions have a tendency to decrease.

HALIFAX.—The state of the various textile manufactures of this town and district continues rather quiet. The worsted and the carpet trades are both rather dull, and many hands employed in the latter are working only five days a week. Wool suitable for blankets sells well.

LEICESTER.—A healthy tone pervades the hosiery trade, although business cannot be denominated brisk, and manufacturers are pretty generally engaged with orders on hand. In the framework knitting districts of Loughborough and Hinckley trade is dull. Yarns are without material alteration in price, but are hardly so much in request. Wools are firm, and high prices continue to be asked for superior sorts.

NOTTINGHAM.—There has been very little doing during the last few days in the lace trade as respects the cotton branch, nearly all departments of which are extremely dull. In hosiery the improvement noticeable a few days ago continues, and future prospects are decidedly more encouraging. In material there is no important change.

GLASGOW.—The wool trade has been quiet. A good many lots have been disposed of, however, and prices remain unchanged. Black-faced laid is in fair request, first-class lots being wanted, but inferior wool, especially if it contain sand or moss, is completely neglected. Cheviots are dull of sale, and quotations are unaltered. Crosses are in somewhat better request.

BELFAST.—Yarns—The improvement lately noted in demand continues progressive, and a slight increase in animation has, to some extent, become perceptible in the trade. Yarns suitable for power-looms are in active request. Prices are steady, although

some few spinners of light line warps have submitted to a slight reduction to clear off stock.

Wolverhampton.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*, and all other sorts in proportion. Welch bars, 5*l* 7s 6d to 5*l* 10s. The nominal price of rails in Wales is 5*l* 5s. Current prices of pig iron:—Staffordshire cold blast, 4*l* 5s; best native hydrate pigs, 3*l* 10s to 4*l*; first-class all mine grey forge pigs, 3*l* 5s to 3*l* 10s; good mine pigs, with a modicum of flue cinder, 2*l* 12s 6d to 2*l* 17s 6d; mine pigs, deterioriated by cinder, 2*l* 7s 6d to 2*l* 15s; Cleator Moor hæmatites, 3*l* 10s to 3*l* 11s 3d; Barrow hæmatites, 3*l* 10s to 3*l* 11s 3d, none in the market; Workington hæmatites, 3*l* 7s 6d to 3*l* 8s 9d; Kirkless Hall hæmatites, 3*l* 7s 6d to 3*l* 8s 9d; grey forge cinder pig iron, 2*l* 5s to 2*l* 10s; white forge cinder pigs, 2*l* 2s to 2*l* 7s 6d; melters, Nos. 1, 2, and 3, 2*l* 12s 6d to 2*l* 17s 6d; superior makes of all mine melting iron, 3*l* 2s 6d to 3*l* 15s, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 10s, delivered; Northern hæmatites, from 3s 7s 6d to 3*l* 11s 3d, according to brand and quality.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, Oct. 6.—The flour market at New York opened with some show of firmness, which was, however, pretty much neutralised as the day advanced, and prices of common and medium grades closed easier, while extra grades were unchanged. The sales footed up about 16,000 bbls, closing within the following range of prices:—Superfine State, 5.20 dols to 5.30 dols; extra State, from new and old wheat, 5.40 dols to 5.50 dols; superfine Western, 5.20 dols to 5.30 dols; common to choice Western extra, 5.40 dols to 5.75 dols; St Louis extra, 5.70 dols to 6.75 dols; mixed to straight Southern, 5.60 dols to 6.10 dols; straight to good extra ditto, 6.15 dols to 7.50 dols; choice extra family and bakers' brands, 7.50 dols to 8.75 dols; rye flour, 3.50 dols to 4.30 dols; corn meal, Jersey and Brandywine, 3,50 dols to 3.90 dols. Canadian flour was easier for common brands, while extras were steady, with sales of about 400 to 500 barrels at 5.70 dols to 7.50 dols for fair to choice brands. Southern was in fair demand, without change of moment in quotations. Wheat was firmly held in the forenoon, and sales reported with some improvement; and as business progressed the feeling grew tame and the market closed dull: the sales embraced about 90,000 bushels, at 1.45 dol for choice white Canada, 1.40 dol to 1.45 dol for fair to prime white Michigan, 1.36 dol to 1.38 dol for good prime white Western, 1.30 dol to 1.32 dol for red and amber Western, 1.28½ dol for red State, 1.29 dol for mixed Western, 1.25 dol for amber Wisconsin and Iowa, and 1.22 dol to 1.24 dol for Milwaukee Club. Corn closed dull, while the sales were confined to about 25,000 bushels at 70c to 70½c for Western mixed.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Only moderate supplies of English wheat, chiefly in very poor condition, have been on sale in the leading markets of consumption held this week. For good and fine samples there has been a steady demand, at very full prices; but other qualities have changed hands slowly, at irregular quotations. At the outports, selected foreign wheats have produced rather more money, arising from an increased inquiry for consumption in the inland districts. The barley trade has continued very firm, and the whole of the samples offered have changed hands at extreme rates, to a slight advance. Some very superior qualities have realised 50s per quarter. New malt has commanded high currencies, and old parcels have ruled firm in price. There has been a good consumptive demand for oats, the value of which has had an upward tendency. Both beans and peas have rather advanced; but the demand for flour, owing to the large influx from abroad, has been less active, at about previous rates. Harvest-work is not yet concluded; but the quantity of grain in the fields is comparatively trifling. The yield of the new wheats, as thrashing progresses, is found very inferior, both as to quantity and quality, when compared with last season. Compared with 1858, the falling off is a serious one.

In Scotland, the bulk of the crops is now secured in, for the most part, good condition. The yield of barley is acknowledged to be the best on record. Wheat has continued firm in price, and there has been a good consumptive demand for all other kinds of produce, on rather higher terms. The potato crop is proving large, and of very fine quality.

The Irish markets have been but moderately supplied with wheat, for which the demand has continued steady, at full quotations. Barley and oats have produced rather more money. Otherwise, the trade has been devoid of animation. Very few shipments have been made to England.

Our advices from most of the Continental markets are to the effect that large quantities of wheat continue to change hands for immediate shipment, at full quotations. All spring corn, too, has been in good request, at extreme currencies. From New York, we learn that shipments of produce continued on a liberal scale; nevertheless, owing to the abundant supplies on offer, no change had taken place in the quotations.

The few fine samples of both English and foreign wheat on offer here, to-day, changed hands steadily, at fully Monday's currency. Low and damp parcels, however, changed hands slowly, at late rates. All spring corn was in steady request, at very full prices. The flour trade was inactive, yet prices were supported.

The annexed observations, in reference to the floating trade, are furnished by Mr Ed. Rainford:—The arrivals off coast since the 10th instant have been 103 up to last night, consisting of 70 cargoes of wheat, 2 rye, 23 maize, and 8 miscellaneous, viz.:—Wheat, 27 from Taganrog, 18 Odessa, 4 Alexandria, 5 Berdianski, 2 Malta, 1 Bayonne, 3 Trieste, 3 New York, 3 Marianople, 1 Galatz, 1 Leghorn, 1 Venice, 1 Constantinople; rye, 2 Odessa; barley, 1 Constantinople, 1 Galatz, 6 Ibraila, 7 Sulina; barley, 1 Galatz, 1 Ibraila, 1 Eupatoria, 1 Sulina; oats, 1 Odessa; beans, 1 Mazagan, 1 Alexandria, 1 Gibraltar. Of these 22 were sold previously. There has been an active business since this day week in floating cargoes; wheat perhaps hardly equal to last week's rates, maize at least 1s dearer and still tending upward. The following prices have been paid, according to condition, quality, &c.:—Wheat, arrived, Marianople and Berdianski, 58s 6d; Taganrog Ghirka, 56s and 55s; hard Taganrog, 54s 9d and 54s; Odessa Ghirka, 54s and 55s, all per 492 lbs; Sandomirka, 60s; Polish Odessa 56s, Galatz 52s, all per 480 lbs; Egyptian Saide 46s per imperial quarter; on passage, Kanizza (fine quality) 60s, Taganrog Ghirka 56s, both per 492 lbs; Saide 44s, Behira 43s per imperial quarter; now shipping, 7,000 quarters Taganrog Ghirka (B. L. September and October) 55s 9d per 492 lbs. Maize, arrived, Foxanian and Galatz, 36s 6d per 480 lbs; ditto out of condition, 35s 6d per 492 lbs; Bulgarian (heated and discoloured) 34s, Ibraila 35s 6d to 37s, the lower priced heated and discoloured; on passage, Foxanian 37s 3d per 492 lbs; Ibraila, 1 cargo 36s, 3 at 36s 6d per 480 lbs; 37s 3d, some say 37s 6d, refused for arrived Ibraila. Barley, arrived, Ibraila 30s; Reni (imperfect) 29s 6d; on passage, Galatz 28s 6d; to be shipped October or November, Odessa 28s 3d, all per 400 lbs. Rye, on passage, Taganrog 32s 9d per 480 lbs; beans, on passage, Behira 33s per imperial quarter for London direct, and 2 Barbary at about 28s per 480 lbs.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane Friday Morning.

Sugar.—Last week's quotations have been maintained, but the market has continued without animation. Yesterday, however, a better feeling prevailed. The transactions in West India reached 1,730 casks in three days, and the public sales have passed off steadily, especially for grocery qualities. 340 casks Barbadoes ranged from 38s to 39s 6d for brown to low yellow; and 40s to 44s 6d for middling to very good, Jamaica

sold by auction at 37s 6d to 42s 6d for brown to good yellow; and Grenada from 36s to 40s per cwt. The stock of sugar at this port has been reduced to 71,150 tons. In the previous season it was 82,100 tons, against 74,600 and 62,500 tons in 1858 and 1857 respectively. The increase in the home deliveries since the commencement of the year is now nearly 13,000 tons.

Mauritius.—At public sale, on Tuesday, 2,240 bags were submitted, when 1,400 bags sold: low to good middling brown, 33s to 36s; grainy yellow bought in at 44s to 45s per cwt. Some business has been done in the lower grades privately.

Bengal.—828 bags grainy descriptions sold steadily: white Bally (16s duty), 48s to 48s 6d; good to fine yellow (13s 10d duty), 44s 6d to 45s 6d. Partial inquiries prevail for Gurpatta data by private contract.

Madras.—The lower qualities sell slowly. On Wednesday, 6,500 bags grocery were offered, when 4,500 bags sold at full prices: middling to fine yellow, 42s 6d to 45s 6d per cwt: the remainder bought in above the value.

Foreign.—Three floating cargoes of Havana reported sold this week, Nos. 10 to 11½ at 26s 9d to 27s 6d for the United Kingdom. By auction, 217 casks Cuba went rather dearer, from 39s to 43s 6d for bright brown to very good grocery. 1,891 bags unclayed Manilla were withdrawn at 33s 6d; 3,000 bags clayed sold privately at 38s 3d per cwt.

Port Natal.—480 tags brought 36s to 41s per cwt for brown to good yellow.

Refined.—The market is quiet, but prices generally cannot be quoted lower than last week. Common dry goods, 49s 6d; crushed, 47s 6d to 48s 6d per cwt. Fine pieces still sell at relatively lower prices than raw sugars.

Molasses.—There has been a parcel of St. Kitt's sold at 18s 6d per cwt.

Rum.—Moderate transactions have taken place in West India this week at a further slight advance. Proof Leewards, 1s 7½d to 1s 9d per gallon. Demerara cannot readily be obtained on former terms. Several contracts have been made in Jamaica. Good Madras has sold at 1s 8d per proof gallon. The stock of West India is 25,760 puncheons against 24,650 puncheons last year. Of East India, 1,800 casks against 4,250 casks. Of foreign, 2,550 casks against 3,800 last year.

Cocoa.—A few parcels of common to middling Trinidad have changed hands by private contract at steady prices, and some good Surinam is reported sold at 70s. 290 bags imported from Havana were taken in at 85s per cwt for good red.

Coffee.—Nothing of interest has transpired in this article, and there is less inquiry by private contract. Several Ceylon vessels have arrived, which will shortly furnish a better supply. Quotations remain unchanged in the absence of public sales.

Tea.—The intelligence received by the mail from China has rather tended to strengthen the market, and the trade have purchased freely at the public sales, which lasted three days, concluding yesterday morning. The total quantity submitted was 39,350 packages, and 17,500 sold at full prices.

Rice.—There has been a large business done this week, and soft grain descriptions are rather dearer than last noticed: Necrancie Arracan, 10s 9d to 11s 3d; Rangoon, 9s 7½d to 10s 3d; Moulmein, 10s 1½d to 10s 9d; pinky Madras, 11s 3d to 11s 6d; white Bengal, 12s to 14s. A floating cargo of pinky Madras is reported sold at 11s 6d without guarantee of quality; a floating cargo of Necrancie Arracan at 11s 4½d; and one of Rangoon at 11s 6d per cwt; the two latter for exportation.

Imports and Deliveries of Rice to October 13, with Stocks on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	29000	25500	72900	60900

Stock	43000	72000	88600	56000

Spices.—Black pepper sold at barely former rates for Singapore, viz., 4d to 4½d; other kinds went without material change: Penang 3¾d to 3¾d; good Alleppy, 4¼d. 1,900 bags were offered in the sales and chiefly sold. 943 bags white Singapore about half sold, including a large proportion of damaged: sound, 5⅞d to 6½d for middling to good bold. 698 bags pimento partly met with purchasers at 3¼d; one lot, 3⅜d per lb. A few cases of mace and nutmegs were bought in above the value. 126 cases Cochin ginger brought 50s to 90s for middling to fine, and 42s to 45s for small. 100 barrels Jamaica: ordinary to middling, 63s to 79s per cwt.

Sago.—1,021 boxes offered by auction were chiefly bought in: fine large grain, 22s to 24s; medium, 17s 6d. A portion realised 17s 6d to 18s 6d per cwt for small grain and small medium.

Saltpetre.—A better inquiry has sprung up and prices of Bengal are rather higher: refraction 13 to 2, 40s to 43s 6d. At auction, 288 bags, refraction 8½, brought 41s per cwt.

Imports and Deliveries of Saltpetre to October 13, with Stocks on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	10400	14300	7500	14400
Delivered	10150	14100	11400	9800
Stock	4100	3650	2270	6630

Cochineal.—Of 431 bags Honduras brought forward in the sales to yesterday, less than one-fourth part sold: black, low to fair, 3s 10d to 4s 6d; silvers, 2s 10d to 3s 2d per lb. The market is still quiet.

Shellac.—Further business has been done in D C orange at 12*l* to 12*l* 5s per cwt, and other kinds show an upward tendency.

Dyestuffs.—Safflower is rather lower, common to fine Bengal selling from 6*l* 12s 6d to 8*l* 17s 6d. Gambier and Cutch have not shown any alteration to notice this week.

Dyewoods.—306 tons Lima were bought in: Altata, 9*l* to 11*l*. 247 tons partly sold. Siam, pile 2, at 7*l* 15s: Manilla bought in at 6*l* to 7*l*. 312 tons Campeachy fustic were taken in at 6*l* 5s; 217 tons Campeachy logwood at 6*l* 15s; and 30 tons red Saunders at 5*l* 17s 6d per ton.

Lac Dye.—225 chests partly sold at 6d to 6½d for common marks. Low taken in at 3d; middling to good at 1s 0½d to 1s 8d per lb.

Rubber.—East India still maintains a relatively high price. 2s 1d has been paid, and 1s 10d per lb for arrival.

Hemp.—A few lots superior white Manilla, by auction, sold at 32*l* to 34*l* 12s 6d per ton. Roping kinds are more inquired after by private contract. Russian higher. Petersburg clean sold at 31*l* per ton.

Jute.—On Wednesday, 5,300 bales, by auction, went at previous rates: common to good marks, 13*l* 10s to 19*l* 12s 6d per ton.

Metals.—The market is still entirely devoid of animation, and there has been less business reported than for some time past. Iron keeps steady in price. Scotch pig was last sold at 52s 3d per ton for mixed numbers. Spelter dull. Small plates have sold at 20*l* 15s per ton. Foreign tin is inactive at the quotations. No alteration has been made in British. Copper and lead sell rather slowly.

Linseed.—Extensive sales have been made in Calcutta to arrive at 56s to 56s 6d. Fine has sold on the spot as high as 59s. Bombay is wanted at 60s. Several cargoes of Black Sea and Azoff have sold: present quotations for these, 55s to 56s per qr.

Oils.—Olive remains quiet, and prices are stationary. Sperm steady at 104*l* to 105*l* per tun. Common fish oils are as last quoted. Linseed has met with a steady demand at 31s. Large contracts are reported in rape: foreign refined, 45s to 46s; brown, 42s 6d; the latter has sold freely for forward delivery up to March at 42s 6d. Palm, owing to scarcity and the high value of tallow, is again dearer: fine Lagos, 47s 6d to 48s. Cocoa-nut has been exceedingly active. Present quotations afloat: Cochin, 53s to 53s 6d; Ceylon, 50s 6d; on the spot, 54s and 51s 6d per cwt respectively.

Turpentine.—There are buyers of rough at 10s. American spirits have been in active demand at 32s 6d to 33s per cwt

Tallow is still entirely subject to the operations of speculators, who have so far succeeded in keeping up the high price of foreign, notwithstanding the large stock. On Tuesday, Y. C. was quoted 58s 6d, subsequently 59s. This afternoon the closing price is 59s 6d per cwt in all positions.

Particulars of Tallow.—Monday, October 15.

POSTSCRIPT. Friday Evening.

Sugar.—The market showed a decided improvement to-day, and prices advanced 6d in many cases. There have been 1,840 casks West India sold, including the parcels by auction, making 3,214 for the week. 1,663 bags grainy Bengal sold at 44s to 46s. 723 bags native Madras: dark brown to low yellow, 31s 6d to 34s. Privately, 1,150 boxes Havana are reported at 39s 6d to 42s 3d; 3,000 bags Jaggery Madras at 31s 6d. A floating cargo of Havana, No. 12½, sold at 28s 3d for the United Kingdom. Refined was steady.

Coffee.—No public sales were held to-day. A floating cargo of St. Domingo sold at 65s 6d per cwt for the Mediterranean.

Cocoa.—154 bags Surinam, in public sale to-day, partly sold at 76s to 77s for fine; the remainder taken in at 69s to 72s. 64 bags Trinidad were withdrawn at 71s per cwt.

Rice.—1,000 tons pinky Madras sold afloat at 11s 9d; a cargo of Rangoon at 11s 7½d; and one of Bassein at 11s 6d per cwt.

Saltpetre.—643 bags Bombay sold at full rates, ranging from 37s 6d to 40s for refraction 6⅞ to 6¾. 363 bags Bengal, refracting 2⅞, were bought in at 44s, and were sold at 43s 6d per cwt.

Spices.—The small sales held to-day went off at previous rates. The white pepper bought in on Wednesday has since sold at 5¾d per lb.

Cochineal.—224 bags Honduras were chiefly bought in. 54 bags Teneriffe sold at 3s 1d to 3s 4d. 28 bags Mexican: silver, 2s 11d; black, 3s 3d to 3s 5d per lb.

Gambier partly sold at 17s 3d to 17s 6d for good. Cutch was bought in at 26s 6d. Bengal turmeric sold at 13s to 13s 6d per cwt.

Oil.—337 casks cocoa-nut sold Cochin, 52s 9d to 53s 9d; Ceylon, 50s 6d to 51s 6d. 536 casks palm partly sold at 42s 3d to 45s 6d; fine bought in at 47s 6d per cwt.

Tallow.—Town, 61s 9d; Y. C., 59s 6d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar remains very quiet; no material alteration as respects prices. The demand for Dutch crushed is very limited. No transactions worth noting.

Green Fruit in good demand. Small parcels of the new crop are being received. Some new Malaga lemons, sold by Keeling and Hunt at public sale, brought a high figure. Lisbon have advanced 3s per package. Lisbon and Oporto chestnuts to hand; quality of both inferior. Black Spanish nuts daily expected. More inquiry for Barcelona.

Dry Fruit.—There has not been any feature of interest in the fruit market this week, beyond a rise in the price of Valencias to 35s. Many cargoes have been sold afloat, but the demand yesterday and to-day does not seem so active as earlier in the week. Many arrivals have taken place, and the quality is good. New currants have been quiet, compared with former weeks. Holders are firm. Arrivals very heavy; close upon 10,000 tons this season in London alone. Crop ascertained (by telegraphic advices of 15th inst.) to be 49,000 tons, all growths. Old fruit is brought forward in very limited quantities, but directly large parcels are brought out we cannot expect to see buyers at present rates. Figs and sultanas quiet, at former prices.

English Wool.—Trade very dull; prices in favour of buyers.

Colonial Wool.—Very quiet, but firm. Arrivals to date for November sales:—Sydney, 3,566; Port Philip, 4,131; Van Diemen's Land, 2,028; Adelaide, 1,162; New Zealand, 4,152; Swan River, 85; Cape, 18,173; total, 33,297 bales.

Flax unaltered.

Hemp.—Since our report we have to note an upward tendency, the market closing firm. No sellers under 32*l* for St. Petersburg clean.

Cotton.—Sales of cotton wool, from Friday, 12th Oct., to Thursday, 18th, inclusive:—2,700 bales Surat at 4d for fair Compta; 4½d to 4⅞d for

middling fair to fair Dhollera ; 4¼d to 5d for good fair new Dhollera ; and 5¼d for good fair new Broach : 1,200 bales Madras, 4¼d to 5¼d for fair to fully good fair Tinnivelly ; and 4d for fully fair Western. The demand continues good, but the quantity offering being small, and holders asking higher rates, the business has been somewhat restricted. Prices of Surat are again higher, particularly Dhollera, which has advanced ¼d per lb; good fair Tinnivelly may also be quoted ¼d per lb dearer ; and Western Madras is mostly held for higher prices. The market closes firmly, the tendency being upward. Yesterday, about 200 bales West India were sold at public sale at 7¾d to 8¾d per lb. P.S.—Market very firm. Sales, 400 bales Tinnivelly, 5d to 5¼d fair to good fair.

SILK.—No alteration, buyers only taking for immediate wants, and waiting for next advices from China.

TOBACCO.—An improved demand has been experienced for good and fine sorts for home trade, and for heavy descriptions for exportation. The market has exhibited increased firmness.

LEATHER AND HIDES.—There is no material change to report this week in the state of the leather market. The attendance of buyers at Leadenhall, on Tuesday, was small, and the amount of business there transacted was not extensive. There has been, however, a fair demand for the best crop hides of 40 lbs and upwards, and also for good unshaved dressing hides, of which the supply was small. The raw market hides continue at our previously quoted low rates. There has not been any public sale of raw hides this week, but 22,000 East India tanned goat and sheep skins have been sold at previous prices. By private contract, 3,800 salted River Plate hides have been sold: heavy, at 7¼d to 7¾d ; light ox, 6¾d to 7¼d; cow, 6¾d; and 5,000 salted Buenos Ayres horse hides, 32 lbs, at 9s.

TALLOW.—Official market letter issued this evening :—

	s	d
Town tallow	61	9
Fat by ditto	3	2
Yellow Russian	61	0
Melted stuff	43	0
Rough ditto	26	0
Greaves	20	0
Good dregs	7	0

Imports this week 3,693 casks.

PROVISIONS.

The bacon market continues firm, at last week's quotations. Courtenay's prime Waterford sold at 71s f.o.b. Stock is very short; there is literally nothing on hand. The high price of live imports from Ireland tends in some degree to throw the pig out of the bacon market, as at the present prices bacon curing is not remunerative. Butter is rapidly rising. Arrivals fall off in quantity. Friesland found a quick sale to-day at 120s. There is a good trade doing in Irish ; quality good.

METROPOLITAN CATTLE MARKET.

THURSDAY, Oct. 18.—To-day's market was fairly supplied with beasts as to number, but their general quality was very inferior. All breeds met a dull inquiry, at Monday's decline in the quotations. Although the show of sheep was rather limited, the mutton trade ruled heavy, and late rates were with difficulty supported. We have to report a very dull inquiry for calves, at from 2d to 4d per 8 lbs less money. The supply was seasonably good.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	8	2	8	Prime Southdown sheep	5	0	5	2
Second quality ditto	2	10	3	4	Large coarse calves	4	0	4	6
Prime large oxen	3	6	4	2	Prime small ditto	4	8	4	10
Prime Scots, &c.	4	4	4	6	Large hogs	4	0	4	6
Coarse and inferior sheep	3	2	3	6	Small porkers	4	8	5	4
Second quality ditto	3	8	4	2	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	4	4	10	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 1,200; sheep and lambs, 5,830; calves, 396; pigs, 300.
Foreign supply—Beasts, 700; sheep, 1,100; calves, 253.

NEWGATE AND LEADENHALL.

FRIDAY, Oct. 19.—These markets continue to be well supplied with each kind of meat. Generally speaking, the trade rules inactive, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	6	2	10	Mutton, inferior	3	2	3	8
Middling ditto	3	0	3	4	— middling	3	10	4	0
Prime large	3	6	3	8	— prime	4	2	4	4
Prime small	3	10	4	0	Large pork	4	2	4	8
Veal	4	0	4	6	Small pork	4	10	5	8

HOP MARKET.

BOROUGH, Monday, Oct. 15.—The market has been freely supplied with the new growth, and for the best samples the demand is active, and extreme rates fully maintained. Inferior sorts receive but little attention, and are very difficult to move. At Weyhill fair the trade ruled heavy ; the few countries and Farnhams sold realised from 16*l* to 28*l*. Our currency is as follows:—Mid and East Kents, 18*l*, 22*l*, 28*l* ; Weald of Kents, 14*l*, 17*l*, 21*l* ; Sussex, 10*l*, 14*l*, 16*l* ; Yearlings, 7*l*. 9*l* 9*s*, 12*l* 12*s*.

FRIDAY, Oct. 19.—There is a good demand for all fine new hops, second class and inferior are not at present much sought after. Very little said or done about duty, which remains about the same as for some time past.

POTATO MARKETS.

BOROUGH AND SPITALFIELDS, Monday, Oct. 15.—Since our last report the arrivals of potatoes have come moderately good, and of fair average quality. On the whole, the demand is steady at full prices :—York Regents, 100s to 120s ; Kent and Essex ditto, 90s to 130s ; Scotch ditto, 100s to 120s per ton.

WATERSIDE, Thursday, Oct. 18.—The supplies of home-grown potatoes are very short at this market, owing to the arrivals having considerably fallen off. The first arrival of French potatoes came to hand yesterday, and realised 50s more than at the corresponding period last year. Prices are likely to rule very high throughout the year, owing to the short crops in most parts of the country, consequent upon the very wet weather. Trade is rather active at the annexed rates :—York Regents, from 120s to 140s ; Kent and Essex ditto, from 120s to 150s ; Scotch ditto, from 130s to 140s ; Dunbars, 140s to 150s ; French, 120s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 5*l* 15s ; clover, 3*l* 10s to 6*l* 0s ; and straw, 1*l* 10s to 1*l* 16s per load. Trade dull.

CUMBERLAND.—Meadow hay, 2*l* 12s to 5*l* 15s ; clover, 3*l* 10s to 6*l* 0s ; and straw, 1*l* 10s to 1*l* 18s per load. A slow demand.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 5*l* 15s ; clover, 3*l* 10s to 6*l* 0s ; and straw, 1*l* 10s to 1*l* 18s per load. A dull sale.

COAL MARKET.

FRIDAY, Oct. 19.—Wall's-end Stewarts 22s 6d—South Hetton 22s 6d—Tees 22s—South Hartlepool 21s 6d—Heugh Hall 20s 6d—Cassop 21s 6d—Eden Main 21s—Trimdon Thornley 19s 6d—Thorpe 21s 6d—Harvey 19s 6d—West Hetton 20s 6d—Thornley 19s 6d—Whitworth 16s 6d—Tanfield Moor Butes 14s 6d—Davidson's Hartley 17s 3d. 34 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 19.—There is a fair inquiry for the most current descriptions of foreign, and prices are well supported, though the transactions are not on an extensive scale.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 19.—Fair attendance, and large consumptive trade. Wheat, 2d per cental dearer. Flour: good inquiry, and 6d per barrel and sack dearer. Indian corn: good demand, 37s 6d for Galatz. Beans turn dearer. Oats and oatmeal without change.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 19.—For manufactured iron there has been a fair demand during the past week, at previous rates for the best descriptions. The tone of the market for Scotch pig iron has been this week somewhat weaker in the transactions that have taken place. In copper, only a limited business doing, at previous rates. Lead continues dull. Other metals remain with little or no alteration.

The Gazette.

TUESDAY, Oct. 16.

BANKRUPTS.

A. Silvester, New Dorset place, Clapham road, photographic artist.
E. Lambley, Charles street, Soho square, tailor.

J. Chisholm, corn merchant, Inverness.
W. Macrae, innkeeper, Carradale, Argyllshire.
T. Buchanan and Son, joiners, Helensburgh.
D. Cherrie, stationer, Airdale.

THEATRE ROYAL COVENT GARDEN.—Last evening "La Trovatore" was performed here, with the attraction of three fresh artistes—Madame Palmieri, who sustained the character of Leonora, Alberto Lawrence, and Theodore Distin. The former has a fine flexible voice, with a good quality of tone—the two latter sing with considerable effect. The singing of Miss Leffler, in the character of Azucena, as a first appearance in that character, was highly creditable and deservedly applauded.

THEATRE ROYAL LYCEUM.—On Thursday night there was an entire change of performance at this theatre, the *pièce de résistance* of the evening being "The Love Chase," one of the most successful productions of Mr Sheridan Knowles. The part of Constance was sustained by Miss Gougenheim, who has already achieved a success in "The Irish Heiress." Miss Kate Saville was the Lydia of the evening. Her performance was distinguished by her accustomed ability, feeling, and truly feminine grace.

PRINCE OF WALES'S HALL, REGENT STREET.—This place of amusement has been opened by Captain Morton Price and Miss Catharine Lucette with their amusing entertainment, entitled "The Double Courtship," and which has met a most successful reception.

COMMERCIAL TIMES

Weekly Price Current.

☞ The prices in the following list are carefully revised every Friday afternoon, by an eminent hoose in each department

LONDON, FRIDAY EVENING.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Oct. 6 amounted to 568,810*l*, and for the corresponding week of last year to 537,120*l*, showing an increase of 31,690*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 247,163*l*, and for the corresponding week of 1859 to 241,186*l*, showing an increase of 5,977*l*.

GREAT SOUTHERN OF INDIA.—From the report of the engineer-in-chief it appears that the long continuance of dry weather and intense heat had rendered the execution of the earthwork difficult, but that, at the same time, the masonry had been proceeded with vigorously, and advantage had been taken of the unusually dry season to get in the foundation of the bridges and culverts, the more important of which were far advanced. Four locomotive engines had arrived, and were to be immediately set to work at ballasting. The prices at which the work had been done were favourable, considering the greatly increased rates paid for labour in India generally. The earthwork had cost about 1½d per cubic yard, and the brickwork 12s.

RAILWAY AND MINING SHARE MARKET. LONDON.

MONDAY, Oct. 15.—The railway market opened this morning without alteration, but afterwards became flatter in sympathy with the funds. In the colonial market, Indian guaranteed descriptions were again dull, Grand Trunk and Great Western of Canada closed the same as on Saturday, at 26¾ to 27¼, and 13⅜ to ½. Foreign railways were heavy, and South Austrian and Lombardo-Venetian left off a fraction lower at ⅜ dis. A reaction likewise took place in American securities, particularly the shares of the Illinois Central and New York and Erie. The optional rights of the former also receded to 4 to ½. Mines were in fair demand, and occasionally showed an advance.

TUESDAY, Oct. 16.—The railway market opened dull, but improved towards the close, especially after official hours, and left off firmly at the best point of the day. Midland in particular advanced 1¼ per cent., and South-Eastern ¾, the low price of the latter attracting attention. Other stocks were ¼ to ½ per cent. higher; Great Northern, however, was exceptionally flat. In the colonial department an improvement took place in Grand Trunk stock and Great Western of Canada shares, the final prices being 27¼ to 28½, and 14 to ¼. Indian guaranteed descriptions remained about the same as yesterday. In the foreign market, South Austrian and Lombardo-Venetian rallied to ⅜ dis. Victor Emmanuel obligations were also firmer. There was rather a better demand for Illinois Central and New York and Erie shares, the last quotations being respectively 20½ to 20 dis., and 39 to 40. The optional rights of the former closed at 4 to ¼.

WEDNESDAY, Oct. 17.—The railway market was firm at the opening, but late in the day relapsed. Midland was especially buoyant, and touched 135½, but afterwards returned to 134¼ to ½. In Lancashire and Yorkshire, Great Western, South-Western, and North-Eastern a decline took place of ½ to ⅝ per cent. Great Northern, on the other hand, improved more than 1 per cent. In colonial descriptions, Grand Trunk of Canada did not fully maintain the late advance, the closing price being 27½ to 28. East Indian stock was steady at 99½ to 100. South Austrian and Lombardo-Venetian were slightly flatter at ¼ to ⅜ dis. No change of importance occurred in American securities. Mines were rather heavy, except East Wheal Russell, in which a rise took place. Joint stock banks showed no material variation. In miscellaneous descriptions, Peninsular and Oriental Steam shares were quoted higher, while Great Ship continued without recovery, at 4s 6d to 5s.

THURSDAY, Oct. 18.—The railway market was dull at the opening, and an improvement that subsequently took place was not maintained. In colonial descriptions, Grand Trunk of Canada stock and Great Western shares were flat, the respective prices being 27½ to ¾, and 13⅞ to 14. Little alteration occurred in the foreign market. In American railway securities, Michigan Central shares improved. Mines were firmer. Joint stock banks left off the same as yesterday. In miscellaneous descriptions Royal Mail Steam advanced, Great Ship shares are still called 4s 6d to 5s. Victoria debentures, new, closed at 106 to ¼; Canadian Five per Cents., 103¾ to 104.

FRIDAY, Oct. 19.—The railway share market to-day was very quiet, except as regards South-Eastern Railway stock, which was in active request, and showed a fresh rise of ½ per cent. London and North-Western and Great Western declined ¼ per cent. Other descriptions were steady, with little business.

BIRTH.

At Victoria, Hong Kong, on 18th August, the wife of Patrick Rose Harper, Esq., banker, of a daughter.

DEATH.

On the 15th inst., at 5 Argyle square, St Pancras, the eldest Son of Robert Herbert, Esq., in his 22nd year.

The Economist's Railway and Mining Share List.

MR LEWIS AND SON,
113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand.

TRADE B/P MARK.
BROWN AND POLSON'S
PATENT CORN FLOUR.
The LANCET states,
"This is superior to anything of the kind known."
FIRST OF THE KIND
Manufactured and Patented in the United Kingdom and France, as explained with Engravings in THE ILLUSTRATED LONDON NEWS, of May 26th. Supplied by BROWN and POLSON, to Her Majesty the Queen, by order from Buckingham Palace. It is in great favour wherever it has been made known, for Puddings, Blancmange, &c., preferred to the best arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers and Purveyors to Her Majesty: Paisley, Manchester, Dublin, and London.

THE FORTY-SEVEN SHILLING SUITS
ARE MADE TO ORDER FROM
Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

MODERATE PRICES WITH GENERAL EXCELLENCE.
E. MOSES AND SON
can confidently assert that they possess advantages and facilities which are quite beyond the reach of any other House in the Trade, and are thereby enabled to offer a REALLY GOOD ARTICLE AT A VERY LOW PRICE. DR BUCHAN'S PATENT
SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 77 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Prout, 229 Strand, &c., &c.
Just published, gratis, or post free for one stamp, to be had of all agents, and at 77 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

DINNEFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

A BOON TO NERVOUS
SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER
TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE
CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER, 228 Piccadilly, London

DR KAHN'S ANATOMICAL
MUSEUM, opposite the Haymarket. Open Daily from Twelve to Five, and from Seven till Ten.
Programme of Lectures for October.
Three and Eight o'clock.—Ill effects of various avocations upon Health, with Pictorial Illustrations shown by the Oxyhydrogen Light and the Oxyhydrogen Microscope. Nine o'clock: Half-an-hour with the Mediums and Spirit Rappers, with numerous experiments.
Admission, One Shilling.
Dr Kahn's "Philosophy of Marriage," and his new work on "Women, specially considered in her relation to the Married State."
Published by Allen, 20 Warwick lane, price One Shilling each; or either sent free by post for 18 stamps direct from the Author.—Address, 17 Hanley street, Cavendish square, W.

VALUABLE INFORMATION.—
GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Free for Six Stamps.
ENGLISH, FRENCH, AND
AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH
is the only STARCH used in
HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

HUNT'S APERIENT FAMILY
PILLS.
Prepared by qualified Medical Men, and have now been in use with the Public for more than 50 years.
The testimonies to their salutary qualities have been most numerous and decisive. They require no confinement from ordinary business, and, indeed, exercise promotes their good effects.
As a mild and effectual remedy in those various forms of disordered health that are sure to occur occasionally with every one, and indicated by Pains in the Head and Limbs, Influenza, Disordered Stomach, Fever, Bilious Attacks, Indigestion, Heartburn, and the like, this Medicine has proved, to persons of all ages and both sexes, most convenient and timely, and a truly valuable means of warding off those attacks of sickness and disease that are the cause to individuals and families of so much suffering and expense.
Prepared by Messrs Hunt, 47 Pulteney street, Bath, and may be obtained at medical establishments throughout the kingdom at 1s 1½d a box, or at 2s 9d, which contains three boxes.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND
CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.
Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

Just published, 71st thousand, price 1s, post free for 13 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.
DR LA'MERT ON SPERMA-
TORRHŒA; an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.
CONTENTS.
SECTION I.—The Physiology of the Generative Organs.
SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.
SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.
SECTION V.—Spermatorrhœa, or Chronic Impotence: its History, Causes, and Moral Consequences—The Sterility of Age.
DR LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.
37 Bedford square, London.

HOLLOWAY'S OINTMENT AND
PILLS.—After using these remedies for 12 weeks only, Mary Dixon, wife of Thomas Dixon, fishmonger, Regent road and Harrowgate, was entirely cured of a bad leg of many years' standing, showing the wonderful effect of these medicines when properly used. She had been confined to her bed for five years, and was twice an inmate of two different hospitals in Leeds, but without obtaining the slightest relief, and was finally informed that she must lose her leg by amputation. Being induced to try Holloway's Ointment and Pills, and using them perseveringly, she averted that calamity, and is now perfectly recovered. Any person similarly afflicted may resort to these same remedies with a perfect certainty of success.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphats of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

VOLUNTEER PIPE.—

RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-plug can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchetts, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

POMMERY'S CHAMPAGNE.—

Extra Sorts Creaming and Sparkling.—Agents in London, A. Kaiep and Co., 22 Basinghall street; Paris, 18 Boulevart des Italiens.

BASS'S EAST INDIA PALE ALE.—

The October brewings are arriving from Burton in 18 gallon casks. The ale in bottle is also in good condition.—BERRY, BROS., and CO., 3 St James's street, S.W.

ALLSOPP'S PALE OR BITTER ALE.—

Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross.
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the table can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

LE SOMMIER ELASTIQUE PORTATIF.

HEAL AND SON

have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome.

The "SOMMIER ELASTIQUE PORTATIF" is made in three separate parts, and when joined together has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse hair, it cannot harbour moth, to which the usual Spring Mattress is very liable; the prices, also, are much below those of the best Spring Mattresses, viz:—

			£	s	d
3 ft wide by 6 ft 4 in.	long	.....	2	5	0
3 ft 6 in.	—	.....	2	10	0
4 ft	—	.....	2	15	0
4 ft 6 in.	—	.....	3	0	0
5 ft	—	.....	3	5	0
5 ft 6 in.	—	.....	3	10	0

The "SOMMIER ELASTIQUE PORTATIF," therefore, combines the advantages of elasticity, durability, cleanliness, portability, and cheapness.

An Illustrated Catalogue of Bedsteads, Bedding, and Bed-Room Furniture sent free by post on application.

HEAL and SON, 196 Tottenham court road, W.

OVERLAND ROUTE.—

The Memoir of the Right Honourable James Wilson, which has been announced, will be published in a Supplement to the ECONOMIST *of the 17th November. Owing to the necessity of communicating with India, it has not been found possible to fix an earlier date.*

ENGLAND'S INTEREST IN ITALIAN FREEDOM.

FEW questions are more difficult to decide than the degree of interest which one nation should feel in the internal affairs or the mutual relations of its neighbours, and the mode in which that interest should be manifested,—when we ought to sympathise in feeling only, and when we ought to interfere in act,—when to protest, when to mediate, and when to march,—and when also to stand aloof, and play the part of mere vigilant spectators. The conductors of this journal, as our readers are well aware,—while fully admitting that in past times our interventions have been indefensibly numerous and needless; usually injudicious and frequently disastrous; based upon no steady or consistent policy and guided by no skilful hand,—have always repudiated the extreme doctrine which some among our public men would deduce from these admissions,—viz., that we ought *always* to look on in silence and inaction, and never take the field either with sword or pen, unless we ourselves are directly menaced or assailed. There is obviously a wide difference between the principles, as between the sentiments, of the opposing schools; between those who hold that because we usually act unwisely, therefore we should never act at all, and those who would reserve action for the noblest causes and the clearest grounds. "The game is seldom worth the candle," it is true; but are no games, therefore, to be played at all? We are not to stand forth before the world as knight-errants whose function is to right all wrongs, to protect all weakness, and to prevent or punish all oppression; but are we to proclaim aloud that *no* wrongs are to be redressed, that *no* weakness has a claim to succour, that *any* oppression and *any* robbery may be perpetrated with impunity and with practical connivance? Between counselling or tolerating ceaseless intermeddling, and adopting the maxims of universal coldness and indifference, there surely lies a wide field for the exercise of a policy at once wise, righteous, and high-minded. We may preach abstinence as a matter of propriety and sense, without erecting selfishness into a duty, to which there is no limit and no exception.

But in plain truth, whatever egotism may advise, a great nation like England *cannot* be an unconcerned observer of the proceedings of other States, and can only rarely confine her concern to observation only. A nation with interests so vast, with connections so ramified, with dominions so extended, cannot avoid feeling and being affected by all the more important actions and emotions of foreign countries. Her position and her antecedents have combined to encumber her with ties and obligations which it is simply *impossible* roughly or suddenly to shake off. She is so powerful that she cannot, even where she wishes, always be isolated and idle. Nay more, powerful as she is, we doubt whether she is powerful enough to bear the burden of hatred and contempt which such icy selfishness would gather round her:—she has not many *friends* now—she would not even have *allies* then. But it is useless to speak as if a policy of this sort could ever be adopted by Great Britain. To embrace it as a principle and to follow it out in action, we should need to change the whole temper and characteristics of the people. Can any body fancy for one moment that all the eloquence of Mr Bright, backed by all the calculations of Mr Cobden, will succeed in destroying or even damping the eager interest with which Englishmen watch either the struggles of peoples fighting for their liberty, or the conflicts of nations contending, one for independence and the other for supremacy? And while that eager interest remains, will Englishmen ever permit their Government to be wholly silent and inactive when the good cause is in peril?—even if a tendency to such quietism were the besetting sin of rulers.

The fact is that on this subject the instinct of the people is sounder than the theory of politicians. It is one of those cases in which "the heart of youth is wiser than the head of "nge." It is not likely that our leaders will drag us into any needless wars: they are now usually timid enough on that score:—the more cold and cautious of our public men have influence enough always to prevent any very prompt armed action, and generally to prevent any very spirited diplomatic language. It is not likely that we shall take any distinct part in the struggle now going on in Southern Italy, beyond that of earnest remonstrance and exhortation; and some may be of opinion that even these have been occasionally carried too far. But what we maintain is that the people of this country are quite right—correct in feeling and instinctively sound in judgment—in manifesting the deepest concern in the progress of that stirring conflict, and that England has a most lively and undeniable interest in the establishment of a free, powerful, and united Italian Kingdom. That interest is threefold:—we shall gain in commerce; we shall gain in peace and therefore in retrenchment; and we shall gain in strength.

We shall gain in *commerce*. Our customers will become at once freer and wealthier. Twenty-four millions of people will become more at liberty to deal with us, and more able to pay us. It is difficult to overestimate the degree in which freedom and good government will develop the resources and augment the strength of Central and of Southern Italy. The agriculture of Lombardy has always been excellent; but under Austrian rule Lombardy was closed to British manufactures. It was almost a "preserve"

for the millowners of the Tyrol and the Vorarlberg. The activity and prosperity of Piedmont have augmented wonderfully under the fostering influence of liberty and law; but still further progress may be confidently looked for under a more liberal tariff;—and such a tariff cannot now be long withheld. Romagna, Naples and Sicily, when law and peace are sure and permanent, will become both far more productive and far more commercially disposed. They can furnish us with grain, wine, oil, silk, and fruit, in rich abundance; and as they grow in energy and wealth, will need our iron and our cottons and linens in return. As soon as the new Kingdom is consolidated, a moderate scale of duties and extended railroads will, we have no doubt, speedily double or treble the commercial intercourse between the countries.

We shall gain in *peace* and in consequent retrenchment. The amount of trouble and anxiety entailed upon our Foreign Office by chronic restlessness or frequent disturbances in any part of Europe, is a matter of serious consideration, though it cannot be set down in pounds, shillings, and pence. Every instance in which the attention of our Ministers is diverted from the more important and special concerns of the Empire to the disputes or difficulties of other States, is *pro tanto* an evil inflicted on our interests. But this is by no means the gravest consideration. Open questions between rival Powers, permanent subjects of dissatisfaction or dissention among neighbours, unsettled claims of any sort whether international or internal, and more than all a feverish and unnatural condition of the people of any country, inevitably operate to keep up to an unreasonable level the usual armaments of the respective Potentates affected, as well as to lead to frequent temporary augmentations of those armaments. The extent of the land and sea forces of the other States of Europe necessarily becomes to a considerable degree the measure of our own. If Austria and France have an open ground of difference, both increase their armaments, till they reach a height which leads, if it does not actually oblige, us to increase ours also. If Austria has schemes or claims which we cannot approve, and which she may call in Russian assistance to make good, we feel—or may at any moment become liable to feel—called upon to make preparations which will enable us to protest with effect against the rendering of that assistance. Generally speaking, the difference between Europe at rest and Europe in a ferment—between a world of open sores and unsettled rivalries and a world of allayed bitterness and ended litigation—is to England a matter of five or ten millions sterling. Now, the "Italian Question" has for forty years been one of the most fertile sources of continental unrest. The "Eastern "Question" only has been a more constant source of uneasiness and menaced conflict, as well as of actual bloodshed. Italy united, free, and at rest, would do more than almost any other conceivable change to herald an era of enduring peace. The most frequent insurrections would be no more heard of. The bitterest hatred felt among civilised nations would be soothed away. Austria, as well as Prussia, would then become once more the natural and cordial ally of England;—and the effect which such a renewed combination would produce on our other foreign relations—on our immediate dangers, and therefore on our defensive estimates—we need not do more than hint at. It would very possibly enable us ere long to reduce our income tax, our sugar duties, and our tea duties by one-half.

We shall gain, finally, in *strength*. Every fresh State that can be added to the number of free constitutional monarchies in Europe is not only a fresh conquest to the cause of human happiness and progress, but is also a fresh source of power and security to Great Britain. Let us not forget that the conflict, or the competition, (whichever we may deem it) between Liberty and Despotism is not yet decided. Of the five Great Powers of the old world, two of the mightiest are pertinaciously despotic; one is constitutional in its form of government, though scarcely as genuinely free as we might wish; the fourth oscillates between Liberty and Despotism, and has now for many years settled down into the latter phase. Holland, Belgium, Portugal, and Sweden are free States, but unfortunately small and feeble ones. Spain, nominally constitutional, brings neither strength nor credit to the common cause. On England hitherto has devolved, mainly and usually unaided, the task both of upholding the great principle and of protecting its weaker representatives. The liberation and union of the Peninsula will change the aspect and redress the balance of the rival creeds. The King of Sardinia was a comparatively powerless and precarious *protégé:* the King of Italy will be a mighty ally. We shall exchange a monarchy of four millions, which we had to foster and advise, for a monarchy of twenty-four millions, which can stand as an equal by our side on the day when the final victory of freedom has to be won.

THE MOST IMPORTANT CIRCUMSTANCES WHICH AFFECT THE PRESENT VALUE OF THE FUNDS.

There is no subject connected with the money market or with trade in general which has such a diffused and such a considerable interest as the price of the funds. It is one of the constant topics of inquiry and conversation. And the various circumstances likely to affect the value of funded property are well worthy of the most attentive consideration which can be bestowed on them.

According to general estimation, though not perhaps in reality, political circumstances are the most influential in determining the price of thefunds. Careful and close observation may, perhaps, show that the supply of stock for the day, and the demand for it, have in truth more substantial influence on its price than rumours as to the intentions of France or than minor events in the Italian question. Still there is no doubt that a political occurrence of real magnitude—that the general tranquillity or general turbulence of Europe—must have, and ought to have, a considerable influence on the price of the funds in this and in every other European country. A state of war is a state of loans. Whatever renders war more likely has a tendency to augment the supply of stock, and should, therefore, have a tendency to depreciate the value of it. What is, therefore, likely to be the immediate future of Europe as far as political finance is concerned? This may seem a very large question; still we think it may receive a simple answer. We think that we shall not in England be without the *apprehension* of war for many years, and yet we doubt if during those many years we shall in *reality* have any war of great magnitude. The state of France itself will cause a real apprehension in Europe for a long time. Its Government—a Government in appearance likely to continue, at least for some time—is a military despotism, based on the half attached acquiescence of the ignorant classes. Its chief is an inexplicable man, of inexplicable intentions. As France is from taste the most aggressive, and from position the most incisive power in Europe, the single fact of her being under such a constitution and such a Sovereign must, with reason or without reason, give occasion to many fears. Several important parts of the Continent, too, are in a transition state: Italy and Austria are so obviously, and other countries have strong tendencies to change, which a little observation will perceive, though they are as yet in some measure latent. Any unknown force must necessarily, as such, give reasons for apprehension. Still a thinking man may rationally doubt whether war is really probable. It is not, as we have often proved, the interest of Louis Napoleon to excite a war. His policy is rather to excite small confusions, and then to gain credit throughout by acting as pacificator and arbitrator in them. He would gain little by a general war; he might lose everything, as Napoleon I. did. Nor are the revolutions which are silently or openly in progress in many parts of Europe now-a-days likely to engage us in a great war. A general crusade in favour of despotism or against tyranny is not now probable. There is not the ramified confidence either among the Sovereigns, or in the Liberal party in Europe, which would render such a result likely,—which, perhaps, is even necessary to its possibility. On the whole it may be said that the political future of Europe for some years is likely to be one of frequent apprehension, though not probably of frequent war.

The financial effect of such a state of politics is evident, and is proved by experience. It tends to a somewhat low price of the funds, but to a rather steady price. Extensive wars lower their price at once and much; but a constant timidity rather precludes their ever attaining a high value than causes frequent fluctuations. And in such a state of

politics the funds will never fall *very* low. There is a misgiving as to the validity of the apprehension. Experien ce shows that when a public danger is not evident, even a slight reduction in the price of the funds will attract the general pnblic to be purchasers. On the whole, therefore, the political circumstances which affect the price of funded property would seem to lead to *steady* the value of it, as well as to prevent its attaining a high value.

Perhaps the monetary circumstances—really the most important circumstances affecting the price of Consols—have the same tendency. Some years since, as well as at other times, there was a confident anticipation that the rate of interest would be lowered. A proposition was actually made by Mr Gladstone for the foundation of a 2½ per cent. stock, and Mr Disraeli remonstrated against the financial scheme of which that proposition formed a part, on the ground that it was much too favourable to the public, and conceded too high an interest to the fundholder. It was believed, not unnaturally, that the prodigious growth of the capital of the country—the enormous and constant annual saving which it makes, would augment the value of the most obvious, secure, and saleable investment in which money can be employed.

But those who admitted this plausible doctrine did not perceive that no less than three circumstances in practice tended to counteract its effect. First, there has been of late years a prodigious growth of new investments. Railway debentures, railway shares, dock shares, shares in companies are obvious examples, and all these yield a higher rate of interest than Government securities. Even among Government securities themselves Consols do not stand exactly in the same position that they once did. Formerly Exchequer Bills were their only important competitor. But now guaranteed stocks, such as the Turkish 4 per Cents., give exactly the same security as Consols, and give about 1 per cent. higher interest. Again, the enormous growth of Indian securities, both those of Government and those of the railways guaranteed by the Government, considerably weakens the practical demand for Consols. It brings into the money market a competitor offering a higher rate on a security, which, though in fact inferior, is very commonly believed to be the same.

In former times this consideration might not have been very effective. There was a time when the public at large hardly understood anything except the funds; some of the more ignorant part of the saving classes did not understand even them. But our second observation is that of late years there has been a prodigious growth of *pecuniary intelligence*. The comparative advantages of different classes of investments are now canvassed by persons who thirty, or even twenty years ago, would have been wholly ignorant of the elements of the discussion or of the language in which it should be expressed. The *investing ability* of the public has increased. And the value of Consols is unfavourably affected by the development of the intelligence which appreciates less complicated investments, as well as by the unprecedented growth of those investments.

Thirdly. There has been a singular development in England of late years of the class of pecuniary middle-men. The growth of the Joint Stock Banks in London is an extraordinary instance of this; but it is only an instance. The same has happened everywhere throughout the country. The banking deposits in every county in England are beyond all comparison greater than they were twenty years ago. And this change is not very favourable to a rise in the value of funded property. Consols are only one of the investments open to bankers—a very good one in many respects, to a limited extent, for they are easily saleable, and their interest is certain to be paid. Still there are other modes of employing money open to bankers:—loans on bills to the bill-brokers, discount of bills, loans on the Stock Exchange and many others, all of which yield a higher interest than Consols, and which, other things being the same, are therefore preferable. And more generally middle-men are the instruments by which the money of the saving class is distributed among the productive class. Whatever facilitates this transmission tends to reduce the price of Consols, for it enables money to find other outlets which formerly must—from the ignorance of the accumulators—have been invested in the sole security *they* could understand, the *Three per Cents*.

But although all these three causes certainly co-operate to reduce the price of funded property, and must for many years prevent the formation of a 2½ per cent. stock, two of them, nevertheless, tend to make the value of funded property steadier than it used to be. An augmentation of pecuniary intelligence has of itself that effect. If pecuniary knowledge were still at a low ebb in this country, Consols might be largely reduced without a proportionate augmentation of buyers. But it is not so now. The same intelligence which attracts men to Railway Debentures and the like investments when Consols are at their average, or above their average, attracts them to Consols as soon as they fall materially beneath it. Intelligent persons are not blinded by momentary circumstances; although from formidable events stock might be low for the moment, they would know it would regain its value, and they would be ready to invest in it. Formerly Government securities always attracted all the money of a certain sort that there was to be attracted; and they could attract no more in a time of difficulty. Now they attract less ordinarily; but by a moderate reduction in price can attract much more to themselves in case of need.

Again: the accumulation of large funds in the hands of bankers is exceedingly favourable to a steadiness in the value of Consols, and it is so because it is favourable to *stock dealing*. The case of a loan is an instructive example of this. After every such transaction by a Government with good credit in the London market, the London Banks advance largely on the security. They are really the holders of a large part of it, though not the purchasers of it. They run no risk, for they require a 'margin,' as it is called, in the value of the security, above the amount of the loan. After even the comparatively small loans of the Russian war, Consols were not unfrequently in this position. Many banks lent very largely upon them. The enormous banking deposits of the country, though not likely to be employed in the purchase of stock to a large extent, are to a very large extent available for temporary advances upon it. In case of a considerable fall in the price of Consols, a stock-dealer can be and is assisted by his banker to a degree to which he formerly would not and could not have been. He is proportionally more powerful; his intervention is more frequent, is on a larger scale, and tends to prevent extreme depressions in the price of these securities. Formerly transactions of this nature were entirely monopolised by a few great capitalists, but, by the aid of Banks, the London Joint Stock Banks especially, they are now open to a much more numerous class of persons.

For these reasons, therefore, we believe that the most effective causes which are now at work upon the price of funded property—whether their nature be political or pecuniary,—tend to prevent the price of the funds from rising extremely high, but also tend to prevent extreme depressions in it,—tend, in a word, to steady it in both directions.

THE INJUSTICE OF THE ENGLISH PRESS TO PRUSSIA.

Prussian policy, either foreign or domestic, is no model for English policy either foreign or domestic, but neither is it fair to judge Prussian liberalism by English standards; and of this we see far too many indications in the comments passed on the recent despatch of Baron Schleinitz to the Prussian Ambassador at Turin, and the general tone of recent criticisms on English relations with Prussia.

The truth is, that Englishmen are just now looking at everything Prussian in a pet;—not quite without grounds, and yet unreasonably enough. An English railway traveller has been grossly ill-used, and the officials of Prussia, from the Ober-procurator Von Ammon downwards have evidently been delighted with the opportunity of showing their hatred towards the English abroad. Again, one of the Queen's yachts was detained in an unmannerly fashion at Cologne, and there, too, we saw the evil *animus* of the subordinate Prussian officials. Their bad *animus* is beyond question. But we do not believe that it is in any degree attributable to the responsible advisers of the Prince Regent. Our indignant English critics should recollect that all the subordinate posts of the great Prussian bureaucracy are filled by specimens of the old *Kreuz-Zeitung* political *stratum*, which remained so long at the surface of affairs, —by remnants of the old Brandenburg and Manteuffel *régimes*, —and are not in any way to be regarded as presenting fair

specimens of the *animus* of the present Prussian Government In fact no change is more gradual and slow than the substitution of one class of political *employés* for another in Prussia. Long after the whole spirit and tendency of the Cabinet has been changed, there remains a dead resistance to all change of spirit in the management of routine details among the subordinates, who cling with obstinate reverence to the prejudices and prescriptions of the previous period. Consequently, it is only on the great affairs of Government,—those managed by the leading statesmen in person,—that such a change of Ministry at first tells. They long continue to be hampered with an organisation,—a diplomatic *body*, as it were, that obeys in all things reluctantly,—and not at all in those minuter details which are hidden from the view of the Ministry,—the will of its informing spirit. We believe that the traces of this fact are seen in all these minute manifestations of ill-will towards the English, of which the Prussian officials have recently been guilty. They hate us all the more for representing one of the principal influences which have robbed them of congenial superiors, and substituted men of minds more like our own.

But this justifiable resentment of the treatment which the English have recently experienced at the hands of Prussian officials should not make us unjust to the Government of the Prince Regent itself. It is, as we have explained, quite as irrelevant as an illustration of the bias or disposition of the present Cabinet, as it would be to argue from the Protectionist principles of one of Sir Robert Peel's earlier subordinate appointees to the policy of Mr Gladstone. We ought to judge the Prussian policy as a whole,—not by these misleading lights, nor yet by English standards, but by Prussian standards and Prussian precedents.

And thus judged, we must say that the Prussian policy with regard to Italy has been as good as we could hope, and better than we had any reason to expect. Prussia has not withdrawn her Ambassador from Turin. She has administered to Sardinia a moral lecture (not very much worse than Lord John Russell's on Venetia) on the impropriety of invading Naples and allowing popular rights to override international rules,—and she has done no more. She has neither guaranteed, nor, as we believe, will she guarantee, Venetia to Austria; she will not even meddle in the matter at all, except to ward off any further menace to Germany on the part of France. She has spoken with mild severity of the conduct of Sardinia, but she remains on good terms with her after all. Her voice is the voice of Russia, but her hand is the hand of England.

And what justification is there for looking for anything more than this from Prussia as yet? If we are to expect from the Prince Regent's administration anything like that hearty admission of popular right which we expect from the administration of Queen Victoria, we are guilty of a gross solecism. It is not well to be impatient with any Power that is gradually liberalising, least of all when that Power is the staid and slow-moving Prussia. It would not be in England's power to exercise any such beneficial influence as has often been spoken of over Prussia, if the Prussian Government were already as prepared as the English Government to sympathise with the constitutional party in Italy, and to rejoice over any events, however grave and apparently revolutionary, which will facilitate its progress. We might as well expect to see the Pharisee suddenly making light of his mint and anise and cummin, and admitting the absolute necessity of a changed heart, as to see Prussia making light of international forms and rules, and admitting the absolute necessity of a new dynasty in Naples. If she so far gives up her legal Pharisaism as to continue on amicable terms with Piedmont, and to unburden her disapproval only in despatches, the progress is as great as we can expect. And when we, judging by English standards, cry down the formalism that cannot sympathise with the great national movement in Italy, we are guilty, in our turn, of the national Pharisaism proper to a nation that has long gloried in its freedom, and resemble the man who 'thanked God' that he was 'the Publican, *not* the Pharisee.'

No one who reads the despatch of Baron Schleinitz with an unprejudiced eye, can forbear to admit that it is a great advance on any that could have emanated from the Prussian Foreign Office under the previous administrations. However unwilling we may be that Lord John Russell should make it his model, or express the sympathy of England with its positions, we may be quite sure that the conflict of tendencies it embodies includes some of a specifically English character. We see in it the half-converted political Pharisee reluctantly confessing that something is needed beyond the letter of the ordinances he has been accustomed to prize,—catching a glimpse of the new principle on which, as he knows, he will be compelled to lean more and more every day,—confessing its importance and power,—and then shrinking back affrighted to the customary supports of his old time-honoured theory. "All the arguments," says Baron Schleinitz, speaking of Count Cavour's memorandum of 12th Sept.—"All the arguments of that document "uphold the principle of the absolute right of nation-"alities. Assuredly we are far from wishing to dispute the "great value of the national idea. It is essentially the "openly avowed moving power of our policy, which in Ger-"many will always aim at the development and the reunion of "the national Powers in a more efficient and powerful orga-"nisation. But while it allows immense importance to the "principle of nationalities, the Prussian Government cannot "on that account admit the justification of a policy which "would renounce all the respect due to the principles of "international law." Who cannot read in these sentences the divided mind of a Cabinet in a state of transition,—groping its way to a manly regard for national freedom,—staggered at the breadth of the inferences to which it is led by this admission, and yet, as a practical result, anxious not to mar what it cannot help protesting against? This is pretty well for Prussia, considering what she was a few years ago. And if England cannot be tolerant enough of the slow development of free principles, to be content with the progress of her German ally,—why she must in future look for friendship to States of matured constitutional freedom alone, and renounce the wearisome task of advising and encouraging the uncertain steps of a nation that is emerging from an implicit faith in the dogmas of despotism into the light of popular liberty.

THE DIFFICULTY WITH REGARD TO *AD VALOREM* DUTIES IN THE COMMERCIAL TREATY.

An apparent practical inconsistency of a very important kind exists in the articles with respect to the *ad valorem* duties in the Supplementary Treaty with France which we give in another column, and to some extent also in the original Treaty. That the remarks which we are about to make may not be misconstrued as general cavillings, we will admit at once that the provisions of the Treaty are, so far as they are at understood, much more liberal to England than was usually expected. Our remarks apply only to an apparent and important inconsistency on one point on which it is exceedingly desirable for the interest of English manufacturers and exporters that the provisions should be perfectly clear.

Any English manufacturer reading the Supplementary Treaty, is sure to be struck by the apparent stringency of the following articles:—

Art. 6. The importer against whom the French Customs may desire to exercise the right of pre-emption stipulated in the Treaty of the 23rd of January, 1860, may, if he prefers to do so, demand a valuation of his goods by experts.

The same demand may be made by the French Customs when they may not think fit to have immediate recourse to pre-emption.

Art. 7. If the result of such valuation by experts should prove that the goods have not a value of 5 per cent. above that which has been declared by the importer, the duty shall be levied upon the amount of the declaration.

If the proved value is 5 per cent. above the value declared, the French Customs shall be entitled, at their choice, either to exercise the right of pre-emption, or to levy the duty on the value determined by the experts.

This duty shall be increased by 50 per cent., as a fine, if the valuation of the exports is 10 per cent. above the declared value.

If the value, as determined by the arbitration, exceeds the declared value by 5 per cent., the costs of the inquiry by the experts shall be defrayed by the declarant. In the contrary case, they shall be defrayed by the French Custom House.

Now the right of pre-emption here referred to is defined by the 4th article of the original Treaty, and is *verbally* the same as that exercised by our own Custom House. The article which contains it runs as follows:—

Art. 4. (Treaty of Jan. 23, 1860.)—The duties *ad valorem* stipulated on the present Treaty shall be calculated *on the value at the place of production or fabrication of the object imported*

with the addition of the cost of transport, insurance, and commission necessary for the importation into France as far as the port of discharge. For the levying of these duties, the importer shall make a written declaration at the Custom House, stating the value and description of the goods imported. If the Custom House authorities shall be of opinion that the declared value is insufficient, they shall be at liberty to take the goods, on paying to the importer the price declared, with an addition of 5 cent.

Now, a very curious inconsistency appears to exist on the surface of these regulations. The right of pre-emption is *verbally* taken from the English Custom House regulations, but there is this very important distinction. The English valuation of import duties on articles which pay *ad valorem* is always made on the *selling price in bond*. In other words, it is made on the value of the goods when they reach the English market as diminished by the rate of duty, which includes, therefore, the *profit of the importer*. If the importer loses by taking this price, with five per cent. added, from the Custom House authorities, it is clear enough that he has declared a false value for his goods,—one lower than the true value.

But, as we have seen, the *new* French mode of estimating the *ad valorem* duties is not to take the selling price in bond. That was the old method as fixed in 1826; but Mr Cobden, vigilant of English interests, has obtained us a rule, which, though more troublesome, is, if it be genuinely acted on, certainly more advantageous to the English manufacturer. It is, as cited above from the original Treaty, that the duties *ad valorem* shall be calculated "on the value at the place of pro-"duction or fabrication of the object imported, with the ad-"dition of the cost of transport, insurance, and commission "necessary for the importation into France as far as the port "of discharge." Moreover, this provision appears to be confirmed by the Supplementary Treaty itself. For article 4 of that Treaty provides the following very stringent precautions for ascertaining that the 'declared value' of the importer is not less than the real value in the exporting country together with these charges of transport, insurance, and commission.

Art. 4. The importer of any goods of British origin or manufacture taxed *ad valorem*, must attach to the declaration verifying the value of that article, and to the certificate of origin, an invoice emanating from the manufacturer or from the seller, which shall show the real price, and shall be *visé* by a consul or consular agent of France in the United Kingdom.

Hence it appears that the "value at the place of production "or fabrication," is to be guaranteed by the invoice price as *visé* by a French consular agent in England. Surely nothing can be clearer than the drift of these regulations,—nothing can be more obvious than that they are intended so as to calculate the *ad valorem* duty on the price of the article *not* as it would sell in the French market less the import duty, but less *both* the import duty and the profit of the French importer. If, for instance, English cutlery (which is to pay 20 per cent. *ad valorem*) be imported to the invoice value of 99*l*, and insurance, transport, and commission cost 1*l*, then the intention of the Treaty appears to be to charge 20*l* for import duty, though the French importer will probably not sell the goods at a less profit than 10 per cent. on his outlay,—that is, not for less than 132*l*,—and their selling price in bond would therefore have been 110*l*. The object of the provisions commented on appears certainly to be to charge the *ad valorem* duty, not on the selling price in bond, 110*l*, but on that price when divested of the profit of the French importers, viz., 100*l*,—*i.e.*, to make the duty not 22*l*, but 20*l*.

But now comes the inconsistency. If this be the intention of the Treaty, why is the right of *pre-emption* at a premium of five per cent. given to the French Custom House at all by the original Treaty? If that provision (apparently adopted from the English practice, to which alone it is relevant) is to be a practical one,—it at once lays down that no French importer shall gain a profit of more than five per cent. on his goods, as the French Custom House may always oblige him to sell them at the value he has declared as his *cost price*, plus five per cent.

Or, again, if it be supposed that the 4th article in the original Treaty is superseded by the new one,—which, however, it cannot be, since the 6th article of the Supplementary Treaty expressly applies to the right of pre-emption given by the former Treaty,—then why is the value of the goods referred to French experts at all, and a high fine of 50 per cent. imposed on any under-estimate which exceeds 10 per cent., and a certain penalty even if it exceeds 5 per cent.? It seems clear that these regulations only apply to the case of an under-estimate of the *selling price in bond in the French market*. Two inconsistent sets of rules are laid down;—on the one hand, a set of rules which would make the declared value a matter of *estimate by the French importer judging by the prices of the French market*;—on the other hand, a set of rules which would make the declared value a matter independent of French estimate, and depending only on the *invoice value* (which is to be guaranteed by the *visé* of a French consular agent), when increased by the sum added for insurance, transport, and commission, as far as the port of discharge.

If the valuation for the purpose of fixing the duty is *not* to include the importer's profit,—then the only conceivable guarantee appears to be the scheme of invoice-values which article 4 of the Supplementary Treaty lays down. The right of pre-emption at an advance of 5 per cent. would simply be a limitation of all profits to that low minimum. A reference to *experts* is out of place, as they could only determine the price in France, and that is not the point in question, but only whether the cost-price is fairly given. A heavy fine of 50*l* per cent. for undervaluation is still less in place,—for the only undervaluation possible would require a falsification of the invoice value, which is to be formally put in evidence.

If, on the other hand, the valuation for the purpose of fixing the duty *is* to include the importer's profit,—then the invoice value of the English exporter is immaterial, and the only question is as to the *selling price in bond*, and the true guarantee the right of pre-emption and a reference to experts. In this case, moreover, it is certainly unfair to allow so small a margin as ten per cent. to the French declarer, and to saddle him with so heavy a fine as 50 per cent. if he under-estimates the value to that extent. It is by no means an easy matter to determine the value of goods within ten per cent. It gives endless occasions for dispute between the Custom House authorities and the importer,—and lays a very heavy penalty on a mistake which need not, within such limits, have been fraudulent. If it be intended to charge the duty on the *selling price in bond*, then a limit of 20 per cent., or at all events 15 per cent., should have been allowed before imposing the penalty of fraud. It is of the greatest importance to our manufacturers that the difficulty raised in these remarks should be speedily solved.

THE FRENCH TREATY.

(From the Supplement to the London Gazette of Tuesday, October 23—Thursday, October 25.)

The following is the English text of the Convention between Her Majesty and the Emperor of the French, supplementary to the Treaty of Commerce of January 23, 1860, with a tariff annexed. This Convention was signed at Paris on October 12, and the ratifications were exchanged at Paris yesterday:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty the Emperor of the French, desiring to ensure the execution of the Treaty of Commerce concluded between them on the 23rd of January, 1860, within the limits and in the manner contemplated by the second additional Article to that Treaty, have resolved to negotiate a first complementary arrangement in order to determine the specific or *ad valorem* duties which shall be imposed upon the goods of British origin and manufacture enumerated in the said Treaty, when imported into France; and they have for that purpose named as their Plenipotentiaries, that is to say:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, the Right Hon. Henry Richard Charles, Earl Cowley, Viscount Dangan, Baron Cowley, a Peer of the United Kingdom, a member of Her Britannic Majesty's Most Hon. Privy Council, Knight Grand Cross of the Most Hon. Order of the Bath, Her said Majesty's Ambassador Extraordinary and Plenipotentiary to His Majesty the Emperor of the French; and Richard Cobden, Esq., a Member of the British Parliament;

And His Majesty the Emperor of the French, M. Thouvenel, a Senator of the Empire, Grand Cross of His Imperial Majesty's Order of the Legion of Honour, &c., His Imperial Majesty's Minister and Secretary of State for Foreign Affairs; and M. Rouher, a Senator of the Empire, Grand Cross of His Imperial Majesty's Order of the Legion of Honour, &c., His Imperial Majesty's Minister and Secretary of State for Agriculture, Commerce, and Public Works;

Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon the following Articles:—

Article I.—The articles of British origin or manufacture enumerated in the Tariff annexed to the present Convention shall, when imported direct from the United Kingdom, under the French or the British flag, be admitted into France at the duties specified by the said Tariff.

ART. II.—In order to establish the fact that the goods are of British origin or manufacture, the importer must present at the French Custom House either an official declaration, made before a British magistrate exercising jurisdiction at the place of despatch, or a certificate granted by the chief officer of the Customs at the port of embarkation, or a certificate granted by the Consuls or Consular agents of France at the places of despatch, or at the ports of embarkation. The above-mentioned Consuls or Consular agents of France shall legalise the signatures of the British authorities.

ART. III.—The importer of machines and mechanical instruments, complete or in detached pieces, of British origin or manufacture, shall be exempt from the obligation of producing at the French Customs any model or drawing of the imported article.

ART. IV.—The importer of any goods of British origin or manufacture taxed *ad valorem*, must attach to the declaration verifying the value of that article, and to the certificate of origin, an invoice emanating from the manufacturer or from the seller, which shall show the real price, and shall be *visé* by a Consul or Consular agent of France in the United Kingdom.

ART. V. When articles upon which an *ad valorem* duty is levied have been previously warehoused, the duty shall be levied according to the value of those articles at the time of their actual entry into France.

ART. VI.—The importer against whom the French Customs may desire to exercise the right of pre-emption stipulated in the Treaty of the 23d of January, 1860, may, if he prefers to do so, demand a valuation of his goods by experts.

The same demand may be made by the French Customs when they may not think fit to have immediate resource to pre-emption.

ART. VII.—If the result of such valuation by experts should prove that the goods have not a value of 5 per cent. above that which has been declared by the importer, the duty shall be levied upon the amount of the declaration.

If the proved value is 5 per cent. above the value declared, the French Customs shall be entitled, at their choice, either to exercise the right of pre-emption, or to levy the duty on the value determined by the experts.

This duty shall be increased by 50 per cent., as a fine, if the valuation of the experts is 10 per cent. above the declared value.

If the value, as determined by the arbitration, exceeds the declared value by 5 per cent., the costs of the inquiry by the experts shall be defrayed by the declarant. In the contrary case, they shall be defrayed by the French Custom House.

Art. VIII.—In the cases contemplated by Art. VI., the two arbitrating experts shall be named, one by the declarant, the other by the local chief of the French Customs service. If there be difference of opinion between them, or if at the time of appointing the experts the declarant shall require it, the experts shall choose an umpire. In default of agreement, this umpire shall be appointed by the President of the Tribunal of Commerce at the port of importation, or, in his default, by the President of the Tribunal of Commerce at the nearest place.

The decision of the arbitrators shall be given within the 15 days which follow their nomination.

ART. IX.—Independently of the duties of Customs, articles of goldsmith's work and of jewelry of British manufacture in gold, silver, platina, or other metals, imported into France, shall be subject to the system of control established in that country for similar articles of domestic manufacture, and shall pay, if it becomes necessary, on the same basis as those, the duties of marking and of guarantee.

ART. X.—The Tariff annexed to the present Convention shall, independently of the articles already admissible under the Treaty of the 23d of January last, be immediately applicable to refined sugars, to works in metal, to machines, to tools, and to mechanical instruments of every description.

ART. XI.—The present Convention shall have the same duration as the Treaty concluded between the high contracting parties on the 23d of January last, of which it is a complement.

ART. XII.—The present Convention shall be ratified, and the ratifications shall be exchanged at Paris within 15 days, or sooner, if possible.

In witness whereof the respective Plenipotentiaries have signed it, and have affixed thereto the seal of their arms.

Done, in duplicate, at Paris, the 12th day of October, 1860.

(L.S.) COWLEY.
(L.S.) RICHARD COBDEN.
(L.S.) E. THOUVENEL.
(L.S.) F. ROUHER.

TARIFF ANNEXED TO THE CONVENTION CONCLUDED ON THE 12TH OCT., 1860, BETWEEN GREAT BRITAIN AND FRANCE.

DESCRIPTION OF ARTICLES.	Rates of Import Duties. 1860. per 100 kil. f. c.	1864 per 100 kil. f. c.
METALS.		
Iron:—Ore of	free	free
Filings, slag, and dross, from the forge	free	free
Pig and fragments of old cast iron	2 50	2 0
Purified cast, called "*mazée*," and old broken wrought iron	3 25	2 75
Crude, in lumps or prisms, not freed from the dross	5 0	4 50
Bars, round, square, or flat; rails of all shapes and dimensions; angle and T iron; and wire, with the exceptions hereinafter mentioned	7 0	6 0
Hoops, of the thickness of 1 millimètre or less	8 50	7 50
Sheets, rolled or hammered exceeding 1 millimètre in thickness	8 50	7 50
In plates weighing 200 kilos or less, and of which the breadth does not exceed 1 mètre 20 centimetres, nor the length 4 mètres 50 centimètres	8 50	7 50
In plates exceeding 200 kilogrammes in weight or 1 mètre 20 centimètres in breadth, or 4 mètres 50 centimètres in length	9 50	7 50
Sheet, thin, and black iron in plates of 1 millimètre or less in thickness	13 0	10 0
(N.B. Thin sheet and black iron in flat plates, cut out or trimmed in any way, to pay one-tenth more than rectangular plates.)		
Sheets, tinned, coppered, covered with zinc or lead	16 0	13 0
Wire, not exceeding 5-10th millimètres in diameter, whether tinned, coppered, or covered with zinc	14 0	10 0
Steel:—In bars of all kinds	15 0	13 0
Sheet, exceeding 2 millimètres in thickness	22 0	18 0
Sheet, not exceeding 2 millimètres in thickness, and wire, including bright wire for instruments	30 0	25 0
Copper:—Ore, filings, and old broken articles	free	free
Ditto, and brass smelted, in pig, bars, or plates	free	free
Rolled or beaten into bars or sheets	15 0	10 0
Wire of all sizes, whether polished or not	15 0	10 0
Gilt or silvered, beaten, drawn, or rolled, and wire laid on thread or silk	100 0	100 0
Zinc:—Ore, crude, calcined, or pounded, filings, and old broken articles	free	free
In pigs, bars, or plates	0 10	0 10
Rolled	6 0	4 0
Lead:—Ore and dross of all sorts, filings, and old broken articles	free	free
In pigs, bars, or plates	3 0	free
Rolled or sheet, alloyed with antimony, in pig, and type, old	5 0	3 0
Tin:—Ore and metal in pigs, bars, or plates, filings, and old broken articles	free	free
Alloyed with antimony (Britannia metal) in ingots	5 0	5 0
Pure metal or alloyed, beaten or rolled	6 0	6 0
Bismuth:—Crude	free	free
Antimony:—Ore and sulphurated	free	free
Metal or regulus	8 0	6 0
Nickel:—Ore and speiss	free	free
Pure, and alloyed with other metals, especially copper or zinc (argentine or German silver), in ingots or pigs	free	free
Ditto, ditto, rolled or drawn	15 0	10 0
Manganese:—Ore	free	free
Arsenic:—Metallic	free	free
Ores:—Not enumerated	free	free
METAL MANUFACTURES.		
Cast Iron:—Not turned or polished:—1st Class. Chairs for railways, plates, and other castings from the open mould	3 50	3 0
2nd Class. Cylindrical pipes (straight), rafters, solid columns, and gas retorts	4 25	3 75
3rd Class. Pots and all other manufactures not included in the preceding classes	5 0	4 50
Polished or turned	9 0	6 0
Tinned, enamelled, or varnished	12 0	10 0
Wrought Iron:—Ironwares (heavy), including framework; pieces of frames	9 0	8 0
Knees and girders for ships	9 0	8 0
Ironwork for carts and waggons	9 0	8 0
Hinges, clamps, large bolts, braces, and other fastenings of doors and windows, not polished nor turned	9 0	8 0
Gratings (solid), beds, seats and furniture for gardens and other kinds, with or without ornaments or adjuncts in cast iron, steel, or copper	9 0	8 0
N.B. (Axles, springs, and tires for wheels, are not included in the above category, but are classed among detached pieces of machinery.)		
Small ironwares ("serrurerie"), including locks and padlocks of all sorts, bolts and hinges, in sheet iron, latches, and flat bolts, and all other articles in wrought or sheet iron for fastenings of doors or windows, and furniture, polished, filed, or turned	15 0	12 0
Nails, forged by machinery	10 0	8 0
Ditto, ditto, by hand	15 0	12 0
Wood screws, screw bolts, and nuts	10 0	8 0
Anchors	10 0	8 0
Chains, and chain cables	10 0	8 0
Tools, in pure iron, with or without handles	12 0	10 0
Tubes of wrought iron, simply welded, of 9 millimètres interior diameter or more	13 0	11 0
Ditto, ditto, less than 9 millimètres, and fittings of tubes	25 0	20 0
Tubes in wrought iron, welded on a mandril, or lap-welded	25 0	20 0
Fish-hooks (for sea fishing) tinned or not	50 0	50 0
Household articles and other wares unenumerated: In wrought or sheet iron, polished or painted	17 0	14 0
Ditto, ditto, enamelled, varnished, or tinned	20 0	16 0
Steel Wares:—Tools in pure steel; files; saws, circular or straight; scythes, sickles, and other unenumerated	40 0	32 0
Needles for sewing, less than 5 centimètres in length	200 0	200 0
Ditto, of 5 and more centimètres in length	100 0	100 0
Fish-hooks (for river fishing), blued or not	100 0	100 0
Metallic pens (other than gold or silver)	100 0	100 0

Description of Articles.	Rates of Import Duties 1860. per 100 kil. f. c.	1864. per 100 kil. f. c.
Small articles of ornament, such as beads, purse garniture, brooches, and thimbles	25 0 ...	20 0
Household articles and other wares unenumerated	40 0 ...	32 0
Cutlery:—Of every description	20 per cent. ad valorem, reduced to 15 per cent. ad valorem o January 1, 1866.	
Instruments, surgical, optical, and philosophical	10 per cent. ad valorem.	
Arms, not being implements of war:—Side-arms	40 0 ..	40 0
Fire-arms	240 0 ..	240 0
SUNDRY METALS.		
Tools of iron tipped with steel, with or without handles	18 0 ..	15 0
Articles made partly of cast and partly of wrought iron, not polished, if the weight of wrought iron is less than half the total weight	5 0 ..	4 50
Ditto, if half or more than half the total weight	10 0 ...	8 0
Ditto, polished, enamelled, or japanned, and with ornamental adjuncts in iron, copper, brass, or steel	15 0 ...	12 0
Wire gauze of iron or steel	15 0 ..	10 0
Cylinders of copper or brass for printing, whether engraved or not	15 0 ..	15 0
Copper wares, metal gauze of copper or brass, works of art and ornament, and all other manufactured articles of copper, pure or alloyed with zinc or tin	25 0 ..	20 0
Manufactures of zinc of all kinds	10 0 ..	8 0
Lead pipes, and all other manufactures of lead	5 0 ...	3 0
Printing type, new	10 0 ...	8 0
Tin pots and pans, and other manufactures of tin, whether pure or alloyed with antimony	30 0 ...	30 0
Manufactures of nickel allied with copper or zinc (argentine)	100 0 ...	100 0
Plated manufactures of every description	100 0 ...	100 0
Manufactures of metal gilt or silvered by the mercurial or electro-plate processes	100 0 ...	100 0
Plate and jewelry of gold, of silver, platina, or other metals	500 0 ...	500 0
Clocks and watches	5 per cent. ad val.	
Clock and watch movements	100 0 ...	100 0
MACHINES AND MACHINERY.		
With Apparatus Complete:—Steam-engines stationary, with or without boilers or flywheels	20 0 ...	6 0
Ditto, marine, with or without boilers	20 0 ...	12 0
Ditto locomotives and portable engines	15 0 ...	10 0
Tenders for locomotive engines, complete	10 0 ...	8 0
Spinning machines	15 0 ...	10 0
For weaving	9 0 ...	6 0
For paper making	9 0 ...	6 0
For printing	9 0 ...	6 0
For agricultural machines, and machines for making sheets and fillets of cards	9 0 ...	6 0
Lace-making machines	15 0 ...	10 0
Distilling apparatus, sugar-pans, and boilers made of copper	15 0 ...	10 0
Carding machines, not furnished	15 0 ...	10 0
Steam boilers of sheet iron, of cylindrical or spherical shape, with or without boiler pipes or heating pipes	10 0 ...	8 0
Ditto, tubular, of sheet iron, with tubes of wrought iron, copper, or brass, or of sheet iron rivetted, with interior furnaces, and all other boilers not of cylindrical or spherical shape	15 0 ...	12 0
Ditto, ditto, of sheet steel of every shape	30 0 ...	25 0
Gasometers, open boilers, furnaces, and stoves in sheet iron, or in cast and sheet iron	10 0 ...	8 0
Machines for making machines ("machines outils") and machines not enumerated:		
Containing 75 per cent. or more of their weight in cast iron	9 0 ..	6 0
Containing 50 per cent. and less than 75 per cent. of cast iron	15 0 ..	10 0
Containing less than 50 per cent. of cast iron	20 0 ..	15 0
Detached parts of machines:—Sheets and fillets of cards on leather, india rubber, or other materials	60 0 ..	50 0
Dents of reeds in iron or in copper	30 0 ..	30 0
Reeds complete, in iron or copper	50 0 ..	30 0
Pieces in cast iron, polished, filed, and adjusted	9 0 ..	6 0
Pieces in wrought iron, polished, filed, and adjusted or not, without distinction of weight	15 0 ...	10 0
Steel spring for carriages, waggons, or locomotives	17 0 ...	15 0
Pieces in steel, polished, filed, adjusted or not: weighing more than 1 kilogramme	30 0 ...	25 0
Ditto, 1 kilogramme and less	40 0 ...	35 0
Pieces in copper, pure or mixed with any other metals	25 0 ...	20 0
Sheets and fillets for cards of leather, caoutchouc, or other materials	20 0 ...	20 0
Gold-leaf, per kilogramme	100 0 ...	100 0
Refined sugar	41 0 ...	41 0
Carriages	10 p. cent. ad val.	
Cabinet-makers' and turners' small wares, and wares in ivory or carved wood (tabletterie")	10 p. cent. ad val.	
Leather: prepared skins, varnished, dyed, and morocco leather	250 0 ...	250 0
Ditto, all other kinds	30 0 ...	30 0
Leather manufactures of all kinds	10 p. cent. ad val.	
Wooden wares: empty casks, new or old not hooped, or hooped with wooden hoops	free ...	free
Ditto, ditto, with iron hoops	10 p. cent. ad val.	
Shovels, forks, rakes, handles of tools, of wood, with or without ferrules	free ...	free
Oars	free ...	free
Plates, spoons, porringers, and other household articles	free ...	free
Pieces of carpenter's work, dressed or not	free ...	free
Parts of cartwright's work, dressed or not	free ...	free
Other articles of wood, not enumerated	10 p. cent. ad val.	
Household furniture	10 p. cent. ad val.	
	Per ton of French measurement.	
Ships and boats, built in the United Kingdom, not registered, or sailing under British flag, in wood	f. c. 25 0 ...	f. c. 20 0
Ditto, ditto, in iron	70 0 ...	60 0
Hulls of ships, in wood	15 0 ...	10 0
Ditto, ditto, in iron	50 0 ...	40 0

N.B. The machines and machinery on board such ships shall be charged separately, according to the rates fixed by the tariff for "machines and machinery."

The present tariff is approved, and annexed to the Convention concluded on the 12th October, 1860, between Great Britain and France.

Paris, Oct. 12.

Board of Trade, Whitehall, Oct. 25, 1860.—The Right Honourable the Lords of the Committee of Privy Council for Trade are pleased to publish, for general information, the following comparative statement, showing the rates of duty payable on the direct importation into France from the United Kingdom, under the French or British flag, of the undermentioned articles of British origin or manufacture, as set forth in the tariff annexed to the Convention concluded on the 12th instant between Great Britain and France, as compared with the corresponding rates of import duty levied on the same articles under the old French tariff.

Description of Articles. Metals.	New Duties. 1860. Per 100 kilos. f. c.	1864. f. c.	Former duties (adding the two decimes). Per 100 kilos.
Iron:—Ore of	Free.	Free.	Free.
Filings, slag and druse, from the forge	Free.	Free.	Fr and 96c
Pig and fragments of old cast iron	2 50 ...	2 0	4f 80c
Purified cast, called "mazee," and old broken wrought iron	3 25 ...	2 75	8f 40c and 9f 60c.
Crude, in lumps or prisms, not freed from the dross	5 0 ...	4 50	Prohibited.
Bars, square, round, or flat; rails of all shapes and dimensions; angle and T iron; and wire, with the exceptions hereinafter mentioned	7 0 ...	6 0	Bars and rails 12f to 16f 80c
Hoops, of the thickness of 1 millimètre or less	8 50 ...	7 50	24f
Sheets, rolled or hammered, exceeding 1 millimètre in thickness	8 50 ...	7 50	24f
In plates weighing 200 kilogs or less, and of which the breadth does not exceed 1 mètre 20 centimètres, nor the length 4 mètres 50 centimètres	8 50 ...	7 50	24f
In plates exceeding 200 kilogrammes in weight, or 1 mètre 20 centimètres in breadth, or 4 mètres 50 centimètres in length	9 50 ...	7 50	24f
Sheet, thin, and black iron, in plates of 1 millimètre or less in thickness	13 0 ...	10 0	24
(N.B. Thin sheet and black iron in flat plates, cut out or trimmed in any way, to pay one-tenth more than rectangular plates.)			
Sheets, tinned, coppered, covered with zinc or lead	16 0 ..	13 0	48f
Wire, not exceeding 5-10ths millimètres in diameter, whether tinned, coppered, or covered with zinc	14 0 ...	10 0	36f and 84f.
Steel:—In bars of all kinds	15 0 ...	13 0	36f
Sheet, exceeding 2 millimètres in thickness	22 0 ...	18 0	
Sheet not exceeding 2 millimètres in thickness, and wire including bright wire for instruments	30 0 ...	25 0	Sheets 60f to 600f Wire 84f

N.B.—The machines and machinery on board such ships shall be charged separately, according to the rates fixed by the tariff for "Machines and Machinery."

Agriculture.

THE MAISEMORE SHORTHORNS.

Passing from Wiltshire to Gloucestershire, we spent the day after that of our inspection of the Broad Hinton herd, in going through that of Mr Morris, of Maisemore Court, about two miles from Gloucester. We noticed this herd last year as offering an example to dairy farmers. We found it in every way prospering. Mr Morris's farm is a good one, containing much fine pasture land, and he has just taken an adjoining farm which will raise his acreage to 600. The Maisemore Court farm, consisting of 460 acres, with a modest and comfortable mansion still occupied by the late proprietor, has just been sold to the Ecclesiastical Commissioners, and the manner in which they deal with the good tenant they find in occupation is worthy of all commendation. Mr Morris has just arranged to take a lease for twenty-one years of the farm and mansion, with a power on his side only to determine it at the expiration of the first fourteen years. The Commissioners are erecting one of the most complete and commodious homesteads we ever inspected, and it is carefully adapted to the system of husbandry pursued by Mr Morris. In fact, the details of the plan are in a great measure his own, worked out under the superintendence of Mr Clutton, the agent of the Commissioners. This homestall comprises stabling for twelve horses; bulls, calves and cow-houses, with a barn, corn and chaff-houses, intended for the application of steam machinery to thrashing, chaff-cutting, and the other requirements of a stock farm. All is built of brick, in the most substantial manner, with slated roofs; and around two of the outsides of the square the stacks will be placed. The contrast between the new farm-buildings, and the rambling, unconnected, and dilapidated buildings hitherto in use, cannot be greater, whether as regards the economy of labour or the comfort of the stock. Fortunate is Mr Morris that the old buildings were wholly incapable of repair, and that his landlord is a corporation which did not hesitate to make a considerable but judicious outlay once for all. Indeed, if landowners generally would from time to time erect such substantial homesteads on their farms, they would find it greatly to their own interest, both by securing and accommodating good tenants, and by getting rid of that system of perpetual repairs by which the incomes of most English estates are so much reduced.

The additional farm of 140 acres, chiefly good land, which Mr Morris has taken, will require an enlargement of his herd,—for, as we last year mentioned, his is a working dairy herd of pure-bred Shorthorns. At present, every cow and heifer on his farm, with a single exception, is bred from two cows which his father bought in 1829, from Mr Strickland (of Apperly Court, Gloucestershire, we believe). Mr Strickland's herd was then of long standing and consisted of the best blood, he having been a purchaser at the sales of the two brothers Colling, and had always used first-rate bulls. Unfortunately, Mr Morris's father not being sufficiently alive to the importance of detailed and particular pedigrees, omitted to obtain them with his cows at the time of his purchase. He was satisfied that they were pure bred, and as coming from Mr Strickland's herd. As time passed on, the produce of these two cows expanded in the hands of the Morrises, father and son, to a considerable herd, of much local repute and very successful in taking local prizes, and then application was made to Mr Strickland for the detailed pedigrees of the two cows he had sold to Mr Morris. But no, with an absence of of liberality not common amongst modern Shorthorn breeders, Mr Strickland refused to communicate those details, and consequently the pedigrees of Mr Morris's cows, after many generations of known blood, always end in "cow bought of Mr Strickland." The uniform and thorough-bred character of the herd, however, fully corroborates the purity of their blood.

Many of the best cows of the Broad Hinton herd take their place and do regular duty in the large herd of dairy cows kept by Mr Stratton, but at Maisemore the dairy herd and the Shorthorn herd are the same. With the exception of a few heifers prepared for

the Gloucester Agricultural Show, not a cow or heifer receives either cake or corn, yet the condition of all is as good as could be desired for every purpose save prize-competition. Like Mr Stratton's, Mr Morris's Shorthorns are highly prolific, and he seems to have none of the apprehensions of abortion some of our breeders are compelled by sad experience to entertain. Consequently, though his chief sales consist of his young bulls, he has always heifers of good pedigree and hardy constitution which may be purchased at reasonable prices. Many of the Maisemore bulls are purchased to go abroad, but the principal customers are the dairy farmers of the district, and it speaks well for their disposition to improve their stock that Mr Morris can readily sell all the bulls he can rear. This is the way in which Shorthorns are best utilised. Both Broad Hinton and Maisemore may be said to produce Shorthorns "for the million." Though Mr Morris's young stock are well kept, the economy with which he accomplishes it is surprising, and beyond the first cost of the cattle there is no reason why every dairy farmer, of competent capital, in Gloucestershire and Wiltshire, should not imitate Mr Morris in keeping nothing but pure Shorthorns for his dairy. That it would answer his purpose to do so we have no doubt. For his best young bulls he would obtain ready sale, while the secondary animals, converted into steers, would sell well as yearlings. Many of the heifers would be sure to sell at good prices, while the cows, when no longer profitable to milk, would fatten easily on the summer grass. That these considerations are operating widely on the dairy farmers of the West of England is quite obvious from the improvement their stock is undergoing. A successful breeder is generally an enterprising farmer in other branches of his business; and so it is with Mr Morris. He, like Mr Stratton, works the steam plough. He is an active member of the Company formed in Gloucestershire for providing steam ploughs for the use of members and others. The Company, formed this year, has already five steam ploughs and apparatus complete; and the day before our visit one of them had been fixed on Mr Morris's farm. The land was then, however, too wet to commence working.

*** *The great pressure on our space caused by the insertion of the New French Tariff, obliges us to omit all our literary articles for this week.*

Foreign Correspondence.

[FROM OUR CORRESPONDENTS.]

PARIS, Thursday.

I hear that the delay which has taken place in the publication of what may be called the second part of the tariff on English goods to be imposed under the treaty—that is that which refers to articles in metals and in leather, to turnery, carriages, &c., &c.—is owing in no respect to the French Government, but entirely to the Foreign Office at London. That part of the tariff was settled some time back between the English and French negotiators, and was sent to London; but, from some unexplained reason, it has not yet come back with the sanction of the English Government. As it would be satisfactory to traders on both sides of the Channel to know as soon as possible what they have to expect, the delay is to be regretted. As to the differences referred to in a preceding letter as having arisen between the two Governments with regard to false declarations as to value, and to the certificates of origin to be required for English goods imported into France, I hear that an arrangement has been come to satisfactory to both parties. False declarations, I am told, are to be punished by a moderate penalty, and the certificates are to be given by French Consuls: there is, however, some discussion going on as to the amount of the fees to be paid to the latter. With respect to the articles on which the tariff has not yet been definitively fixed, I am assured that they will, according to all probability, be imposed much more lightly than was to have been expected: it is said, for example, that the duty on cotton yarn will only be about 10 or 11 per cent. *ad valorem*, and that on cotton fabrics from 12 to 15. On the whole, the tariff under the treaty, will be a most moderate one; "it will, in fact," as a distinguished economist said to me the other day, "make the French Customs system, after that of England, the most liberal of any great Power in Europe."

In compliance with a wish expressed by the proprietors of steel works, the French Government has commenced, or is about to commence with that of Sweden, negotiations for a treaty of commerce by which Swedish iron will be admitted into France at a very moderate duty, perhaps even altogether free. The treaty with Belgium (which, as you were informed some time ago, is in negotiation) will, it is not doubted, admit among other things Belgian coal, iron, yarn, fabrics, and glass on pretty nearly the same terms as those of England.

I notice in some of the newspapers published in the coast towns complaints that the fishing trade is subjected to a host of vexatious regulations from which others are exempt; in some places, for example, fishermen are prohibited from selling the produce of their fishing to whom they please, but wait to make the sale to certain persons at a certain place, and even in some cases for a certain fixed price. Among these complaints I perceive recorded a fact which is extremely curious, considering that the development of railways seemed certain to increase the consumption of fish, by affording facilities for its conveyance into the interior; and that fact is, that though the number of boats engaged in the fishing trade in all France increased in the ten years from 1847 to 1857 by 605 (they were 6,681 in 1847, and 7,286 in 1857), the number of men engaged in those boats actually declined from 33,194 to 31,877—a falling off of 1,317!

Your readers may remember that some time ago the inhabitants of Montpellier, department of the Herault, proposed to establish at their own cost a course of lectures on political economy; but that at the prayer of the prohibitionist fraternity, who were then all-powerful, the Government refused to sanction the project, and, as in this country nothing can be done without Government sanction, it came to nothing. The Montpellier people, however, who have always been remarkable for their devotedness to liberal commercial policy, and who have proved it by the steadfastness with which they for years supported the arduous struggles of M. Michel Chevalier who is connected with their town—these good people have recently revised their scheme of having political economy publicly taught at Montpellier, and the Government has been induced to sanction it. There is reason to believe that Bordeaux and other towns will soon follow this example; and it is much to be desired that it should be adopted all over France, if for no other reason than that the spread of sound notions as to the creation and distribution of wealth, and as to the advantages of commercial liberty, would do much to check the baleful influence of Socialism, which still continues to be very great among the working classes.

The subscription of the 37,500,000f opened by the Credit Foncier was filled up in four days. The precise amount offered has not yet been announced, but there is no doubt it largely exceeds that required.

The Société Generale de Credit Industriel et Commercial advertises the payment from the 1st of next month of 5f per share (it is equal to 4 per cent. of the paid-up capital), as a dividend of the first half of the present year.

An Imperial decree fixes the import duty on rice from India and the Western coast of Africa at 50c the 100 kilogs by French vessels, and at 2f by foreign vessels. From all other parts, whether by French or foreign vessels, or by land, the duty is to be 2f. By another decree, machinery and detached parts of machinery destined for sugar manufactories, may be imported into the French colonies on the same terms as into France. The Board of Customs has decided that the skins for bookbinding called *vachettes*, shall, like the scented leather of Russia, pay henceforth the import duty of 5f each.

A certain General d'Orgoni, a Frenchman, who went to the Birman Empire some years ago as a military adventurer, and has attained a high position there, has just communicated to the Chambers of Commerce in this country a concession obtained by him from the Birman Government, in virtue of which Frenchmen are allowed to trade and reside in the country on condition of conforming to local usages, to navigate with their vessels the Irrawady free of duty, to obtain gratuitously portions of land on the banks of that river for the construction of dockyards, to work coal mines on the payment of a small tax, and, finally, to import in their vessels all sorts of goods on payment of a duty of 6 to 10 per cent. *ad valorem*. What will be the practical value of these concessions remains to be seen.

It may interest some of your readers to be told that the free import of corn and grain into the French West India island of Martinique, is to be allowed for the present by English and American vessels.

The movements on the Bourse during the past week have left quotations pretty nearly as they were:—

The monthly Customs returns have been published. As was set forth in the table of indirect taxes given in last week's ECONOMIST, they show a falling off in the amount of import duties; but that was inevitable from the large reductions recently made on various important articles of general consumption, and accordingly it occasions neither surprise nor uneasiness. In September last the import duties were 11,082,000f; whereas in the corresponding month of last year they were 15,194,420f; and in that of 1858,

15,716,814f. For the first nine months of the present year they were 100,595,000f; same period last year, 142,250,597f; and same period of 1858, 141,785,576f. It is in cocoa, coffee, cotton, indigo, wool, cast iron, and sugar that the decline has taken place. There is also a falling off in coal, but it is not considerable, and must, doubtless, be regarded as accidental. The following is a detail of the *quantities* of the principal imports; it will be noticed that those o the articles just mentioned, with the exception of coal and foreign sugar, present a large increase, which is the best proof that could be given of the excellence of the late reforms:—

It will be observed that tin, wool, and indigo figure among the exports this year, though they did not do so in the two preceding years: this is because no record used to be kept of the export of such articles, owing to the insignificant quantities taken. It will be of interest to watch them for the future, inasmuch as if they increase, it will prove that France is becoming the market for such things for certain Continental States.

The following is an account of the markets:—

Flour at Paris, yesterday, was 60f to 64f the sack of 159 kilogs,—same price as last week. Four marks were 61f 50c to 61f 75c, and for some lots 62f for the present month; November, 61f 25c; November and December, 61f.

Wheat.—At *Paris*, yesterday, business was not active, and prices were 36f to 38f 50c, and some lots 39f the sack of 120 kilogs. Of the provincial markets, 85 present a rise of from 14c to 1f 59c the hectolitre, 31 a fall of from 17c to 1f 82c, and 30 have undergone no change; 33 are reported firm.

Cotton.—The demand at *Havre*, in the week ending Friday, was active—29,946 bales having been disposed of. Closing prices were 2f to 3f higher for the very low, low, and very ordinary qualities, and 1f higher for ordinary and other qualities. Low New Orleans was consequently 88f the 50 kilogs, and very ordinary ditto 96f. The arrivals were 1,721 bales. This week, there has been a fair demand, and prices remain unchanged.

Sugar.—At *Havre*, last week, as many as 1,410 casks French West India were sold at 49f 50c to 50f the 50 kilogs duty paid; 600 bales of Reunion, 58f 75c. The arrivals were about 2,000 casks. Little has been done this week: French West India, 49f 75c; Havana, 37f 50c. At *Bordeaux*, last week, upwards of 1,500 casks French West India went at 48f 25c to 49f 25c; 4,830 bales Reunion at 50f 75c to 52f 65c; 2,143 casks Havana, 72f to 73f; and a small lot of Mauritius, 75f to 76f for the 100 kilogs. No sales have been made this week. At *Nantes*, last week, as many as 17,435 sacks Reunion were sold at 51f 75c; 1,036 casks French West India, 48f 50c to 48f 75c, and a small lot 49f; also some small lots of ditto for delivery, 48f and 48f 50c. This week, a rather large lot of Mauritius has been taken at 52f 75c; some French West India at 48f 75c. At *Marseilles*, last week, 5,000 bales Reunion went at 52f to 53f.

Coffee.—Business at *Havre*, in the week ending Friday, was not very active: 400 sacks Hayti Gonaives, 83f the 50 kilogs in bond; 469 sacks Rio not washed, 77f 50c; 698 Malabar, 112f duty paid. The arrivals are about 15,000 sacks and some casks of different sorts. This week, Hayti has been done at 80f; Gonaives, 85f; Ceylon triage, 108f 25c to 109f; Mysora, 115f; Malabar, 111f 50c; Porto Cabello, 59f; Rio washed, 81f to 87f. At *Bordeaux*, last week, business was insignificant, only a small lot of Santiago, at 96f, having been sold. Some arrivals of Mysore took place. Nothing important done this week. At *Nantes*, this week, Reunion *fève ronde* has been at 133f. At *Marseilles*, last week, 2,200 bales Guayra went at 88f to 94f; 2,471 sacks Rio washed, 86f 50c; 1,400 sacks St Domingo, inferior quality, 80f; 1,700 sacks Rio not washed, 76f to 79f. The arrivals exceeded 4,000 sacks Maracaibo and Indian.

Indigo.—At *Havre*, last week, about 80 cases Bengal were sold, part at 25c below, and part at 25c above the estimates. There were no arrivals. Some sales have been made, this week, at prices kept secret. At *Bordeaux*, last week, only some small lots of Kurpah were sold at 10f to 21f the kilog. Notbing done this week.

Hides.—Business at *Havre*, in the week ending Friday, was not active. 600 Monte Video dry, 132f 50c the 50 kilogs duty paid; 3,500 ditto salted, 82f 50c to 83f 50c; 3,300 ditto, 80f; 150 Pernambuco drysalted, 96f; Illinois dry, 122f; 1,500 New Orleans salted, 51f; 1,035 horse dry La Plata, 9f 75c each; 15 bales kid ditto, 10f 25c the dozen. The arrivals exceeded 17,000. This week, Pernambuco has been at 67f 50c; Buenos Ayres dry, 130f.

Wool.—At *Havre*, in the week ending Friday, 34 bales La Plata unwashed went at 2f 25c to 2f 30c the kilog; and 5 bales German washed, 6f 50c. The arrivals were about 700 bales. This week, Monte Video unwashed has been at 2f 65c; Peru unwashed, 2f 42½c to 2f 47c.

Tallow.—At *Havre*, last week, 71 casks Russian and 151 New York went at 71f for the 50 kilogs duty paid. The arrivals were 25 casks from New York. This week, some Russian has been sold at 72f 50c. At *Paris*, yesterday, the 100 kilogs were 149f 25c—a rise of 2f.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was 103f to 104f the hectolitre; Montpellier, 86 deg., 150f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 140f, and beetroot 110f.

BRUSSELS, Oct. 24.

An association has been formed here for extending commercial relations between Belgium and Spain.

BERLIN, Oct. 24.

A treaty of commerce between the Zollverein and Paraguay has just been concluded; it is on the "most favoured nation" principle.

COMMERCIAL AND MSCELLANEOUS NEWS.

Bombay advices to the 25th ult. bring the following commercial intelligence:—The tone of the market during the past fortnight has again been dull, and the sales of imports very moderate in extent. Cotton piece goods have been less forced upon the market than during the previous period, and business consequently much more limited, but leaving prices without any further reductions to be noted. The accounts from the interior respecting the growing crops are still less favourable than could be desired, a want of moisture having in some places been experienced, withering the young grain, and preventing transplanting operations from being fully carried on. Money is still overabundant, evincing the want of legitimate sources of employment. Government securities have not materially varied, and the present values are 82⅛ to 82⅜ for Four per Cent., 97½ for Five per Cent., and 102¼ to 102¾ for Five-and-a-Half per Cent. paper.

Statement of business at the United States Assay Office at New York for the month ending September 29, 1860:—

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending September 22, 1860, compared with the previous month:—

	Aug. 25, 1860.	Sept. 22, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	21677669	21058365	...	619304
Private Banks	3350069	3312110	...	47959
Joint Stock Banks	2927249	2935094	7845	...
Total in England	27954987	27295569	...	659418
Scotland	4114195	4096771	...	17426
Ireland	6187709	6166077	...	21632
United Kingdom	38256801	37558417	...	698474

And, as compared with the month ending the 24th of September, 1859, the above return shows a decrease of 301,494*l* in the circulation of notes in England, and a decrease of 692,607*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 1,102,825*l*, the English joint stock banks are below their fixed issue 367,263*l*,—total below fixed issue in England 1,470,088*l*; the Scotch banks are above their fixed issue 1,347,500*l*, the Irish banks are below their fixed issue 188,417*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 19th of September was 16,174,340*l*, being an increase of 539,587*l* as compared with the previous month, and a decrease of 698,127*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 22nd of Sept.:—Gold and silver held by the Scotch banks, 2,456,069*l*; gold and silver held by the Irish banks, 2,276,015*l*; total, 4,732,084*l*; being a decrease of 12,068*l* as compared with the previous return, and an increase of 109,692*l* when compared with the corresponding period last year.

Consequent upon the recent advices from New Orleans, relative to the unfavourable effect of the late storm upon the crops, the market was much excited on Saturday, and, under a temporary active demand, holders were in some instances enabled to obtain a material advance upon the closing prices of Friday last. The market subsequently became less animated, and transactions have since been moderate at our revised quotations below. The total sales for the three days aggregate 12,000 bales, including 1,000 in transit, the market closing steadily. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	7	7	7	7⅛
Good ordinary	8⅛	8⅛	8⅛	8½
Middling	10⅞	11	11⅛	11⅜
Good middling	11½	12	12⅛	12⅜
Middling fair	12¼	12¼	12¼	12¼

The arrivals have been from Texas, 80 bales; Georgia, 2,314; South Carolina, 1,597; North Carolina, 15; Virginia, 66; Baltimore, 18—total, 4,090 bales. Total import since 1st inst., 7,504 bales. Total import since 1st September, 28,257 bales. Export from 1st to 9th October, 3,191 bales, against 6,329 in 1859.

NEW YORK, Oct. 13.—There continues a steady fair demand, under which the market remains firm at full previous prices. The sales aggregate 10,000 bales, including 2,000 in transit.

The cotton market has been quiet all the week, only a moderate amount of business having been transacted by the trade. There is little or no change to notice in prices of any description, but sales have generally come fully up to the level of our quotations. There has been perhaps rather more trade inquiry for Egyptians than for some time past; other kinds do not call for remark. The sales to-day scarcely exceed 8,000 bales. The market continues quiet. The reported export amounts to 8,550 bales, consisting of 3,340 American, 240 Brazil, and 4,970 East India.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Oct. 10.—FLOUR AND MEAL.—The demand for State and Western flour was moderate on Saturday, the market somewhat depressed, and the closing rates of the preceding day were barely obtained. Under the combined influences of a tolerably active inquiry from the local and Eastern trade, and favourable European advices on Monday, the depression was recovered from, and the market became buoyant and animated, while transactions were heavy at an appreciation in values of 5c to 10c per brl,

mainly on the better grades of State brands. Transactions for the three days aggregate 60,000 brls. Southern flour has been heavy and in limited request at about previous prices. Transactions since Friday amount to 6,700 brls, at 6.25 dols to 6.35 dols for Brandywine.

EXPORT, from 1st to 9th October.

	1860 barrels	1859 barrels
Wheat Flour	68,039	62,693

GRAIN.—We have to notice a continuance of the active demand for wheat, under which transactions have been heavy, and prices have further advanced 2c to 3c per bushel on all kinds. The sales have been largely for export to Great Britain, but considerable quantities have also been taken for shipment to other foreign ports, as also for local milling. The receipts are very heavy, and the active movement in the West towards the seaboard continues uninterupted. Every boat and barge has been brought into requisition, and the receipts must be very heavy up to the close of navigation. The sales since our last aggregate 447,000 bushels, as follows: 5,400 bushels amber Wisconsin, at 1.27 dol; 42,000 Chicago spring, 1.19 dol to 1.23 dol; 1,000 white California, 1.20 dol; 8,300 white Michigan, 1.45 dol to 1.55 dol; 49,000 winter red Western, 1.34 dol to 1.35 dol: 8,500 white Indiana, Ohio, &c., 1.40 dol to 1.45 dol; and 23,000 Milwaukee Club, 1.26 dol to 1.26½ dol. Corn has been in fair request, at full previous rates; the sales comprise 192,000 bushels.

EXPORT, from 1st to 9th October.

	1860 bushels	1859 bushels
Wheat	591,062	5,000
Corn	14,740	3,232

NEW YORK, Oct. 13.—Flour is held at an advance of from 5c to 10c per barrel. Wheat has further improved 2c to 3c per bushel.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1860.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

The leading markets held this week have been somewhat scantily supplied with English wheat, in, chiefly, poor condition. The few good and fine parcels on offer have changed hands freely, at very full prices; but other kinds have ruled heavy, at late rates. There has been a good consumptive demand for foreign wheats, and, in some instances, the quotations have advanced 1s per quarter. Barley—both English and foreign—has changed hands freely, and the currencies have had an upward tendency. Both old and new malt have moved off steadily, but without leading to any quotable change in value. The latter is producing very high rates. Oats have advanced 6d to 1s per quarter, and both beans and peas have sold on higher terms. Owing to heavy importations, the flour trade has continued in a very inactive state. Holders, however, continue firm in their demands.

At length, nearly the whole of the crops have been secured in the United Kingdom; but, from all quarters, we hear that the new wheats are turning out a very indifferent sample, and that the bulk of them will not be fit for grinding purposes for several months. All kinds of spring corn are much weathered. We are of opinion, however, that produce, generally, has seen its highest range, owing to the enormous influx of foreign food, and the fine condition in which it is coming to hand. The warehouses, both in London and the outports, are now full of produce.

In Ireland and Scotland, the transactions in wheat have been on a fair average scale at very full prices. Spring corn has changed hands somewhat freely at extreme rates. It is pretty generally understood that unusually large quantities of produce, including potatoes, will be shipped from Scotland to the South during the winter months.

Most of the continental markets have continued very firm for wheat. The transactions on English account are still on a liberal scale. Barley, oats, beans, and peas are purchased in large quantities for England, and prices have shown a tendency to advance. In the United States, wheat, flour, and Indian corn have sold briskly at very full currencies. The shipments are still unusually heavy, especially to London and Liverpool. The stocks in the interior of the country appear to be very large.

Only a limited supply of English wheat was on sale here, to-day, and a good clearance was effected at Monday's prices. There was a fair demand for foreign wheat at full currencies. All spring corn was very firm; but the demand for flour was restricted to small parcels.

Mr Ed. Rainford reports the state of the floating trade as follows:—Since the 18th inst. up to last night 82 grain-laden vessels have arrived off coast for orders, consisting of 55 cargoes of wheat, 1 rye, 21 maize, and 5 miscellaneous, viz.:—Wheat, 1 from Constantinople, 21 Taganrog, 9 Berdianski, 15 Odessa, 3 Alexandria, 1 Trieste, 1 Bayonne, 2 Venice, 1 Marianople, 1 New York; rye, 1 Odessa; maize, 7 Sulina, 5 Ibraila, 7 Constantinople, 1 Yiazit, 1 Galatz; barley, 1 Berdianski; beans, 1 Larache, 1 Gibraltar, 1 Casabianca; locust beans, 1 Tavira. About 23 of the above were previously sold. There has been an animated business this week in floating cargoes, especially maize, which suddenly sprung from 37s, the higher price paid for Ibraila on Friday last, to 40s on Tuesday, at about which price it now remains; buyers, however, on account of the rise, are cautious, and little has been done in maize since that day. The following prices have been paid (in accordance with quality, condition, &c.):—Wheat, arrived, Berdianski, at 58s 9d and 59s; Marianople, 58s 9d; Taganrog Ghirka, 55s 9d to 56s 6d; Odessa Ghirka, imperfect, 53s 6d, 54s, and 54s 6d, all per 492 lbs; Sandomirka, 60s; Polish Odessa, 56s and 56s 6d; a cargo, imperfect, at 53s 6d; 1 cargo, for Continent, about equal to 59s 6d, all per 480 lbs; another cargo, 57s per imperial quarter; on passage, Berdianski (September shipment), 58s 6d; Saide, 45s; Behira, 43s and 43s 6d per imperial quarter. Rye, arrived, Odessa, out of condition, 32s 3d per 480 lbs; ditto, good, 35s per imperial quarter. Maize, arrived, Foxanian, not quite perfect, 38s to 39s per 492 lbs; Ibraila and Galatz, imperfect, 37s 6d; Ibraila, 36s 9d to 40s; Wallachian, 39s, 39s 6d, and 40s, all per 480 lbs; on passage, Galatz 39s, and Foxanian 38s 3d per 492 lbs; Ibraila 36s 6d for Cork, and 38s for the United Kingdom; Bulgarian, 37s 6d; now shipping, Ibraila, 37s 6d, all per 480 lbs. Barley, arrived, Danubian, 29s; on passage, Ibraila, 29s 6d, 30s, and 30s 3d; now shipping, Odessa, 30s and 30s 6d; to be shipped in October and November, Odessa at 30s 6d, all per 400 lbs. Beans arrived in London, Saide at 35s 6d per imperial quarter.

The London averages announced this week are:—

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria. cap. 32, for the week ending on Wednesday, the 24th day of October, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,165,615	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	13,690,615
		Silver Bullion	...
	28,165,615		28,165,615

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,490,273
Rest	3,131,576	Other Securities	19,724,649
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	3,412,745	Notes	6,718,550
Other Deposits	14,786,598	Gold and Silver Coin	744,661
Seven Day and other Bills	794,214		
	36,678,133		36,678,133

Dated the 25th October, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,241,279	Securities	29,136,922
Public Deposits	3,412,745	Coin and Bullion	14,435,276
Private Deposits	14,786,598		
	40,440,622		43,572,198

The balance of Assets above Liabilities being 3,131,576*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£328,806
An INCREASE of Public Deposits of	158,636
An INCREASE of Other Deposits of	441,729
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	430,612
A DECREASE of Bullion of	149,860
An INCREASE of Rest of	8,993
An INCREASE of Reserve of	187,660

The Bank returns of this week present but little for comment. The most unfavourable feature in them is that the other securities have increased 430,612*l*, and the bullion presents again a decrease of 149,860*l*; and, on the other hand, the reserve has increased 187,600*l*, the other deposits 441,729*l*, and the Government deposits 158,636*l*.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,215,706	£ 20,585,707	£ 22,083,524	£ 23,173,660	£ 22,241,279
Public deposits	6,254,823	4,861,740	6,130,265	5,590,545	3,412,745
Other deposits	9,938,411	11,263,986	13,331,992	13,921,452	14,768,598
Government securities	14,228,901	10,254 541	10,809,467	10,875,157	9,490,273
Other securities	10,868,740	20,404,597	14,783,137	18,093,163	19,724,649
Reserve of notes & coin	10,153,969	4,078,529	12,382,616	9,160,981	7,463,211
Coin and bullion	15,973,669	9,369,794	19,132,476	16,918.551	14,435,276
Bank rate of discount	2½ p. c.	8 p. c.	3 p. c.	2½ p. c.	¼ p. c.
Price of Consols	97⅛	89	96½	96	93
Average price of wheat	39s 0d	55s 6d	42s 4d	42s 10d	60s 6d
Exchange on Paris (shrt)	25 15 20	25 30	25 7½ 12½	25 7½ 12½	25 15 20
— Amsterdam ditto	11 17 17½	11 15 16	11 15	11 14 14½	11 14½ 15
— Hamburg (3months)	13 9½ 9¾	13 10	13 7	13 5 5¼	13 5¼ 6¼

In 1850, the rate of money was remarkably low; on call it was difficult to be placed at 2 per cent., and the rate of discount for first-class bills was 2¼. The Bank of Amsterdam had commenced selling gold in anticipation of the discoveries in California depreciating its value.

In 1857, the Liverpool Borough Bank had just suspended. The exchange at New York on London had recovered from 100 to 105 to 108. The Bank of England rate of discount was 8 per cent. The East India Company, after borrowing 1,000,000*l* of the Bank of England, had obtained another loan of like amount from other London Banks, including the London and Westminster, at 6 per cent. per annum, for 2 years. A portion of the proceeds was in course of transmission to India in the shape of silver, to the increased disturbance of the money market here. The price of the English funds was, however, inproving. The news from India was more favourable, Delhi having at length fallen.

In 1858, the anticipation of a reduction in the Bank of England rate of discount from 3 to 2½ per cent. had not been realised, although the best bills were taken in Lombard street at 2¼. Consols had risen to 98½, and the Indian 4 per Cent. Debentures, the second batch of which had been issued, to 100.

In 1859, the rate of money was easy at 2⅜ to ½ per cent., and 3 per Cent. Consols ranged about 96. The only political feature was the pending war between Spain and Morocco. The biddings for 423,600*l* Victoria 6 per Cent. Debentures had taken place: the minimum price fixed was 108, and all were taken at about 108½, and immediately after rose to 1¾ to 2 prem.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 928,329*l*; in 1857, a deficiency of 9,140,611*l*; in 1858, a deficiency of 1,451,145*l*; and in 1859, a deficiency of 4,171,711*l*. In 1860, the deficiency is 4,938,051*l*.

DISCOUNT AND MONEY MARKET.—The rate of money in the discount market is 3¾ to 4 per cent. Paper having but a few days to run has been discounted at 3¾ and ⅞, but the fair quotation is 3⅞ to 4. Money is abundant at these quotations, and from the great caution exercised by the discount houses in having their money as much as possible under control, there does not appear any reason to fear any disturbance in the money market from domestic causes; but it is not easy to understand the continued withdrawals of gold from the Bank of England, at one time said to be for the Bank of Madrid, at another for the Discount Bank at Paris. Yesterday, 20,000*l* in bar gold and 50,000 sovereigns were taken, said to be for Egypt, on account of a loan lent by the capitalists of France to the Pacha of Egypt. That loan, if we mistake not, was for 800,000*l*, and we understand policies have been opened for 600,000*l* for the insurance of gold to Egypt, but it by no means follows that this amount will go. The Red Jacket has arrived with 152,000*l*, which will be immediately bought up for exportation. As an exchange operation, gold cannot be sent to the Continent save at a loss, but still it appears to go, and while these operations are going on it is impossible to give any decided opinion as to the course of the money market; and this seems to be the opinion of the monied world, for all appear to be exercising the greatest caution, and limiting their transactions to as short periods as possible.

To-day 50,000 sovereigns have left the Bank for Scotland; but it is well known that the circulation in Scotland increases considerably during the months of March and November.

Money in the Stock Exchange is abundant from day to day at 2 per cent.

We know not whether allowing the maltsters to dray corn may have any effect in checking the rise in the corn market, and as a consequence the importation; but it is necessary to mention the fact as the quantity of corn imported will exercise a great influence on the money market.

The following are the rates of discount at

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3½	3
Hamburg	No Bank rate	2½
Brussels	3	3
Frankfort	2	1½
London	4	3⅞
St Petersburg	5	5½
Vienna	5½	5½

ENGLISH FUNDS.—The fluctuations in the English funds have not exceeded ¼ per cent., the extreme prices being 92⅞ and 93⅛; and to-day the price of Consols opened 93 to ¼ for money and close 92⅞ to 3 for money and the account. 3 per Cent. Reduced and New 3 per Cent. are 91½ ⅝. Exchequer Bills are very heavy at 2 dis. to 1 pm. The transactions in the funds have been very limited.

FOREIGN FUNDS.—Foreign funds have been very steady during the week. Mexican Bonds seem to attract some attention on the part of speculators. Turkish funds have improved. It would appear by advices from Constantinople that the revenue of Turkey amounts to 11,000,000*l* sterling, and her expenditure to 13,000,000*l*, and retrenchments are promised which will reduce the expenditure by 2,000,000*l*. There never will be any permanent improvement in Turkish finances

until the pernicious system of farming the revenue is put an end to; for already has the future revenue been mortgaged to the extent of 7 or 8 millions, and this represents the present deficit. If the financial system of Turkey were to undergo a thorough practical reform, there is no doubt that an equilibrium of income and expenditure would soon be arrived at, and this is the point to which the Governments of France and England ought to direct attention if they wish to uphold Turkey.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

RAILWAYS.—The market for railway shares has, generally speaking, been heavy, and the tendency is towards depression. It must be remembered that railway shares have had a considerable run during the last few months. It is natural to suppose that a reaction may take place in them. We have received the report of the London Directors of the Grand Trunk of Canada Railway, by which it appears that having recently received from Canada the accounts of the Company, made up to the 30th June, they have availed themselves of the opportunity afforded by their distribution to make known to the shareholders and also to the bondholders,—1st, the exact state of the Company's finances (which demonstrates the impossibility of paying the interest on the 2nd Preference Bonds due on the 1st October); and 2ndly, also the steps which the London Directors recommend should be pursued with the object of relieving the Company from its present embarrassments. The shareholders are aware that, although authority has been given to raise 1,500,000*l* sterling to increase the rolling stock, and pay off liabilities, and meet current wants, the Directors were unable to raise it on any terms, and that consequently they drew up a memorial to the Canadian Government, praying for relief, and the reply is that the subject of the Grand Trunk Railway will be brought under the notice of Parliament, and that the Government are about to issue a commission to inquire into its affairs.

The Manager in Canada concurs in the wish to make a searching investigation, but the Directors think it would be more satisfactory to the shareholders, bondholders, and themselves, that some one or two gentlemen well versed in railway management, and in whom they all had confidence, should proceed to Canada, and, in conjunction with the proposed Government commission, report the result which they feel confident will, by the future action and liberal policy of the Government and Legislature, result in some practical remedy for the existing embarrassments of the Company. The following is an estimate of the Company's liabilities in England:—

	£
To loans and bills payable in England	1,782,668
Bills drawn by the Company from Canada	235,564
	2,018,232
Against which are hypothecated the following securities, viz.,—	
£275,600 2nd Preference Bonds	
326,000 Ordinary Bonds	
47,200 Toronto Corporation Bonds	for the value of 443,043
32,500 Atlantic and St Lawrence Shares	
7,500 Atlantic and St Lawrence Bonds	
	1,575,189
Brought forward	1,575,189
Securities in hand, £32,300 ordinary 6 per Cent. Bonds	
— 27,600 7 per Cent. Bonds	
Add unpaid and overdue interest on Bonds	130,500
	1,705,689

Pending this proposed investigation, Messrs Baring Brothers and Messrs Glyn, Mills, and Co. have obtained a judgment against the Company, for debts due to them and others they represent; but this measure has been adopted for the general benefit of all creditors and protection of the Company's interests.

The Directors have delayed calling a meeting in the absence of an answer from the Canadian Government to their memorial, and also of the Hon. John Ross, President, and Mr Blackwell, vice-president; but as these gentlemen will be in London in December, a meeting will be convened of the shareholders for the middle of that month.

The London Directors have at present no exact return of any further floating indebtedness which may exist in Canada for additional rolling stock provided since March and other expenditure, but have desired such a report to be made.

	£
Since the estimate of the wants of the Company in March last, its pecuniary position has been deteriorated by the payment of interest on Bonds and Loans	161,000
Difference in value of assets from fall in prices	250,000
	411,000
Whilst on the land to be resold, and valued at	120,000

only a small portion, realising 5,000*l*, has been sold; which will explain the increase in the net requirements of the Company at the present time, as compared with the statement issued in March last.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

FAILURES.—Advices from Sydney state that forty-eight estates had been sequestrated during the month ended the 20th August, of which the only large suspensions were:—

Thomas Betteridge, of Sydney, wholesale grocer; 25,542*l* 2s 4d estimated liabilities, 8,827*l* 10s estimated assets. Henry Haydon, of Sydney, wholesale grocer; 25,850*l* 15s estimated liabilities, 3,194*l* estimated assets. Alfred Chandler, of Braidwood, storekeeper; 12,909*l* 1s 8d estimated liabilities, 7,647*l* 8s 8d estimated assets. Henry Augustus Cobb, of Braidwood, formerly store keeper; 13,156*l* 17s 3d, estimated liabilities, 20*l* estimated assets. Charles Newman Furlong and William Kennedy, trading together under the style of Furlong and Kennedy, of Bathurst street, Sydney, millers; 13,790*l* 16s 6d estimated liabilities, 13,803*l* 8s 8d estimated assets.

Advices from Rio de Janeiro by the French steamer Guienne state the failure of Messrs Carruette and Co. to have been for 190,000*l*. They mention, also, that although the firm have covenanted to pay their creditors a composition of 60 per cent., the instalments are to be spread over two years, without security, while it is also a condition that the partners are to take the first 8,000*l* realised by the assets as a capital to enable them to continue business. The principal circumstances connected with the failure of Senhor Mello e Souza, which took place in September for nearly 500,000*l*, still remained without clear explanation. Previously to the stoppage of Carruette and Co., another flour dealer, named A. de Castro, had stopped for about 112,000*l*. There have also been several

other failures in the dry goods trade, and thus the total liabilities of suspended firms during the past three or four months had been raised to an aggregate little short of a million sterling. The debts of the flour and dry goods dealers fall chiefly on foreigners, those of Mello e Souza principally on the capitalists and banks in Rio.

The certificate meeting in the case of Messrs Streatfeild and Co. takes place on the 28th November.

MISCELLANEOUS.—The Oriental Bank Corporation have declared a dividend at the rate of 14 per cent. per annum. As this increase was somewhat unexpected by the shareholders, it has been followed by a considerable advance in the shares, which have risen to 47 per share.

The first ordinary general meeting of the Milford Haven Dock and Railway Company was held at Milford, on Monday the 22nd instant, Colonel Greville in the chair. The present capital of the undertaking is 140,000*l*. It was the opinion of the late Robert Stephenson, that Milford Haven was destined to become the great naval and commercial port of England. The following is an extract from the report:—

The importance of Milford Haven in a national and commercial point of view is every day becoming more apparent, and your Directors have no doubt that it is destined shortly to be a great port of transit. During the last session of Parliament various railways were authorised, and others are now projected, all tending to connect Milford Haven with Manchester and the manufacturing districts. Public attention has been more prominently called to the capacities of Milford Haven as a great seaport, by the recent visit of the Channel Fleet, and also of the Great Eastern, practically demonstrating the opinion of the Admiralty authorities (corroborating that of Lord Nelson), that Milford Haven is one of the most accessible and finest harbours in the world. Since the passing of the Act your Directors have turned their attention to the introduction into the undertaking of capitalists interested in the development of the proposed docks.

The following resolutions were adopted:—

1. That the report of the Directors now read to the meeting be adopted and approved.

2. That Colonel the Hon. Robert Fulke Greville, Henry Edward Ransom, William Walter Cargill, and Aristides Xenos, be and are hereby elected Directors of the Company.

According to the report issued by the Directors of the Royal Mail Steam Packet Company, the revenue is satisfactory, but in several points the expenditure has been unavoidably increased. The balance at the credit of the insurance account is 133,955*l*. The Directors allude in congratulatory terms to the satisfactory manner in which the Atlantic and intercolonial mail service has been performed under the accelerated tables commenced in March last. They conclude by recommending the usual dividend of 2*l* per share.

The agents for the conversion of the Canada Debt have issued the following announcement:—

Canada Bonds.—Messrs Baring Brothers and Co., and Glyn, Mills, and Co. are instructed by the Government of Canada to continue the conversion of the Sterling Debentures of the Province into Canadian Consolidated Five per Cents., at the rates stated in Mr Galt's circular of 31st of December, 1859. The option of converting is limited to thirty days—from the 1st to 30th November inclusive.

London, Oct 24, 1860

It is understood that the unsubscribed balance of the Brazilian Four-and-a-Half per Cent. Loan of 1,373,013*l*, contracted in March last, which was reported at the time to be about 400,000*l*, has been all taken by capitalists in Brazil.

Advices from Naples state that the railway concessions granted to Messrs Adami and Lemmi, of Leghorn, have not been revoked, as was reported, but confirmed with modifications. One reason for the hastening of railway enterprise in the Two Sicilies consists in the desirableness of finding work for the native volunteers, who will be thrown out of employment at the conclusion of the revolutionary struggle.

At a meeting of the shareholders of the General Discount Company, the resolution passed at a previous meeting, in favour of "voluntary" winding-up of affairs, was confirmed.

The half-yearly meeting of the proprietors of the Globe Insurance Company was held at the offices of the Company (William Chapman, Esq., Chairman; Sheffield Neave, Esq., Deputy-Chairman), when the usual dividend, at the rate of 5 per cent. per annum (free of income tax), was declared.

In consequence of the fact that a large quantity of grain is in a very bad condition, from the late heavy rains, the Board of Inland Revenue has ordered "That no objection be made to maltsters drying barley or other grain on their entered malt-kilns, although they may, at the same time, have grain in operation making into malt, provided they give notice in writing to the officer stating the time they intend to load the kilns and the kind of grain to be dried."

In our advertising columns will be seen the prospectus of the Wheal Ellen Mining Company. We have every reason to believe, from the high respectability of those connected with it, that the statements put forth may be relied on.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about 2 per mille premium, and the short exchange on London is 25.17½ per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 424½ per mark, and the short exchange on London is 13.4½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 2-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between England and America.

Imports of the week ..... 306,224 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The samples of English wheat on offer at Mark lane, to-day, were mostly disposed of at Monday's currency. In foreign wheat—the supply of which was good—a fair retail business was transacted at very full prices. The demand for barley, oats, beans, and peas was tolerably active, and the quotations had a hardening tendency. Flour sold to a moderate extent at previous currencies. The imports from abroad, this week, are liberal, viz., 36,720 quarters of wheat, 4,010 barley, 8,070 oats, 4,210 sacks and 30,940 barrels of flour.

At Liverpool, this morning, most kinds of produce met a steady inquiry at full quotations. The importations into that port continue on a very large scale.

Messrs Briggs and Co., of Alexandria, writing on the 12th inst., state that produce was coming forward freely, and that the demand ruled steady at the advanced quotations:—Wheat—Saide, private trade produce, 34s 9d to 35s 6d; Behira, private trade produce, red, 34s to 34s 8d; Behira, private trade produce, white, 34s 9d to 35s; Behira, Pacha's produce, 35s to 35s 6d: Beans—Saide, 25s 9d to 26s 3d; Saide, Pacha's produce, 26s to 26s 6d; Behira, 24s to 24s 6d: barley, 21s 6d to 22s 9d; lentils, 25s; peas, 26s; linseed, 43s 6d to 44s 6d per quarter.

The sales of the week in the Liverpool cotton market have amounted to 53,500 bales, and include 36,500 bales to spinners, 5,500 to speculators, and 8,500 bales for export. Quotations are without change since Friday last. The sales to-day are 7,000 bales. The market is decidedly weakening again, and unless some exciting news should arrive from the States, the market may remain flat and lifeless.

"Our mail advices," write Messrs Neill and Co., of New York, "confirm the improvement in crop prospects noticed during the past few weeks. The protracted drought during summer gave rise to extreme low crop views; but with the favourable weather which has since prevailed, it is not surprising to find that these views have been greatly modified, even in those sections where the crop suffered most. The weather continued favourable for maturing and picking cotton everywhere up to the early part of the past week, but since then we hear of rain from several points. The date of frost will be closely watched this year; but the crop in many places is forward, and in South Carolina we hear that frost could even now do little harm."

The following return shows the export of cotton from Bombay from 1st January to the 24th September:—

	1860 bales		1859 bales
To Europe	361,779	.....	474,390
To China, &c.	182,979	.....	125,042
Total	544,758	.....	599,432

Showing a decrease of 54,674 bales.

There has been only a limited demand for all kinds of tea; nevertheless, prices generally, have been well supported.

In some instances, rather more money—say 6d to 1s per cwt—paid for good and fine raw sugars, with an improved consumptive inquiry. Low and damp parcels have commanded extreme rates. Refined goods are the turn dearer.

At public sale Ceylon coffee has changed hands slowly at a decline in value of 1s per cwt. Other descriptions have continued in moderate request at about stationary prices. Cocoa has ruled inactive at previous rates.

A considerable business has been transacted in rice, partly for shipment to France at 3d per cwt more money.

Public sales of silk have been held this week. They are thus reported by Messrs Durant and Co.:—

The quantity offered was about 1,800 bales Bengal silk, 3,000 bales China, 1,000 bales Japan, and 300 bales Canton. As usual the whole was allowed to pass without biddings; but it was a meagre assortment, comprising very little really desirable in any of the respective classes. Trade continues as bad and unpromising as ever; but the progress of the season naturally induces some of our manufacturers to be turning their attention to preparation for the spring, at present without any noticeable effect beyond their having availed themselves of the anxiety of importers to sell at the last unloading, to buy some small quantities at a reduction of another 6d per lb. Unfortunately the steamer just arrived from China brings only 250 bales instead of her usual complement; we are thus left to wait another week for a supply.

	Imports Warehoused from Oct. 1 to 25, 1860. bales.		Deliveries from Oct. 1 to 25, 1860. bales.		Stock, Sold and Unsold on Oct. 25, 1860. bales.

Japan	1106	.....	572	.....	1656

At the public sales of Guatemala indigo held on Tuesday, the quantity brought forward was 1,405 serons, of which about 255 serons were bought in, leaving 1,150 sold at 3d to 5d advance on July rates for shipping kinds, and about par for consuming.

Great competition was displayed for all desirable red shipping qualities. Prices ranged as follows:—

	s	d		s	d
Sobres, good to fine	5	9	to	6	4
ordinary to middling	5	0		5	8
Cortes, middling to good	4	6		5	3
ordinary	3	9		4	4
low	3	2		3	8
lean and bad	1	8		3	0

Saltpetre has been in somewhat improved request, and English refined has advanced 1s per cwt. The supply on offer is rather extensive.

Currants have commanded more attention, at full prices, and there has been a good business doing in Valencia raisins, at 30s per cwt.

Most kinds of hemp have ruled very firm in price; but the transactions in flax, wool, jute, and coir goods have not increased.

The spirit market generally has continued somewhat active. Brandy and rum have sold at extreme rates, and plain German spirit is held at 2s per gallon.

We have no change of importance to notice in the value of oils; but the market generally may be considered very firm.

Tallow has been less active, and T.Y.C., on the spot, has sold to-day, at 59s 3d to 59s 6d—for all the year, 59*l* per cwt.

"The money market," observes the New York *Shipping List* of the 10th inst., "has a more settled appearance than at the close of last week, and though the demand is fair for the season, the recent tendency to higher rates appears to be checked. The ruling rate on call is 7 per cent., and all paper of fair quality readily passes at quotations below:—

	Per cent. per annum.		
Loans on call, stock securities	7	to	...
Do. other good securities	7		8
Prime endorsed bills, 60 to 90 days	6½		7
Do. 4 to 6 months	6½		7½
First class single signatures	8		8½
Other good bills	9		10
Names less known	12		20

We hear of little or no change in the dry goods trade. The market continues to be characterised by a firm healthy tone, which promises to be maintained during the entire season. There has been a considerable movement in print cloths, which have been taken freely for export. An interesting feature, and one of considerable significance, is embodied in the fact that some of the dealers are preparing samples of light goods for shipment to South America, believing that the perfection to which the American manufacturers have attained in the construction of this class of goods will ensure to them a favourable competition with English fabrics, which have heretofore monopolised the trade. It may be mentioned that the shipments from this port have hitherto consisted almost wholly of heavy goods. Trade with the West continues tolerably active, and transactions for the week present a fair aggregate. Foreign goods are without material alteration. The auction sales constitute the leading and most interesting feature, and continue to divert attention from the regular trade. For the favourite leading styles, however, the demand is fair, and prices satisfactory."

MARKETS IN THE MANUFACTURING DISTRICTS.

The transactions in goods for shipment to India have somewhat increased this week; but, in a comparative sense, they have continued on a moderate scale. There has been a fair average business doing for most of the continental markets at very full prices, whilst the home trade is remarkably healthy; hence, no important increase has taken place in the stocks in warehouse. The price of wool is still very high, and manufacturers generally complain of unusually small profits. In the iron districts no movement of importance has taken place. Coals have been in active request at high quotations.

MANCHESTER, Oct. 25.—The market has relapsed into almost total inaction; prices have hardly as yet become easier, but the difficulty of selling has considerably increased, and buyers look for a fall before being disposed to operate. Eastern merchants have been more occupied in computing their losses on recent account sales than desirous of extending transactions, and casual stringency in getting discounted long-dated paper has added to their caution. Manufacturers have been more or less working out their former orders, and yarns being so scarce and dear in comparison with the manufactured article, they have not sought to forestall a decline on their productions which would not be covered by cost. Our quotations are nominal.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

BRADFORD.—Though the wool sold has for so long a time been small in quantity, the consumption on the whole has been considerable. The inquiry for cotton yarns, both single and twofolds, is rather better, and in cotton warp suitable for the fancy trade, the demand exceeds the supply, making prices very firm. The home trade is still exceedingly flat. Manufacturers are at a loss how to employ their looms to avoid a loss.

LEEDS.—There was only an indifferent attendance in the market on Tuesday; it was very dull, and the transactions appeared to be limited to sorting up for present requirements.

ROCHDALE.—The inquiry for flannel is decidedly less brisk generally, though some descriptions are still much in request, Magentas more particularly, these being as much sought as they are difficult to produce. Manufacturers are still very busy on old contracts, and are not anxious to accept new ones. The Yorkshire goods manufacturers are still busy, and are rather difficult to deal with. The local wool trade is characterised by considerable dulness. Prices are no lower, but it is doubtful whether an offer for a quantity at a slight reduction would be refused for the finer qualities. Brokes are too low in stock for a reduction to be thought of.

LEICESTER.—The hosiery trade continues steady, and the demand is fully equal to an average, and altogether business remains in a healthy and satisfactory state. Yarns are as dear, and spinners continue well employed. The wool market is firm, and high currencies are maintained.

NOTTINGHAM.—The lace trade is dull this week; buyers purchase very sparingly, and manufacturers only produce to order. The plain net trade, with the exception of brown goods, is dull, and fancies (cotton) are not in request. A little is doing in the silk lace trade, but in no department is there an average amount of business transacting, and stocks are kept as low as possible. In hosiery, the improvement noticeable a fortnight ago continues, and future prospects become more encouraging. Some good orders are expected from the States, and the trade generally is in decidedly a more healthy condition than for some time past. Yarns keep up in price, as does also silk.

HUDDERSFIELD.—We have had a better feeling in our market, consequent upon the appearance of some large buyers about the Cloth Hall and the warehouses. Prices are still quite firm.

HALIFAX.—The woollen manufacturers are still very busy, and consequently short wools go off well, prices being fully maintained. The spinners are now becoming slacker, foreign orders having fallen off, and the home trade continuing very dull. In stuff goods there is also a very limited business doing.

BIRMINGHAM.—There has been little alteration in the state of trade in this town for the last two or three weeks. Complaints that business is dull are general, but this has not shown itself, except partially, so far as operations at the manufactories are concerned. The artisans are working average time in all the principal staple trades, and in some instances manufacturers are unable to get their orders executed as rapidly as is desirable, such being the case in several of those branches in which there is usually a good deal of activity at this period of the year. The orders recently distributed on account of the foreign trade in every department are small.

GLASGOW.—There is not much alteration to quote in the wool market. The demand has been rather quieter, but holders are not pressing their stock upon purchasers, and prices are fully maintained.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The market presents a more settled and firm appearance, and prices have in many cases advanced 6d per cwt, owing to the moderate supplies offering. There was a further decrease in the stock last week,

and the deficiency, contrasted with that of 1859, is 11,350 tons, the deliveries for home use showing an excess of 13,100 tons. All kinds of West India find ready buyers, and the transactions to yesterday (Thursday) amounted to 2,705 hhds, including the parcels by auction. Barbadoes ranged from 38s to 38s 6d for brown, and 39s to 44s 6d for low soft to good yellow: other kinds 38s to 41s for brown and yellow.

Mauritius.—4,661 bags by auction, on Tuesday, principally sold, at and afterwards: brown, 33s to 38s; low soft grey to middling yellow, 39s to 41s 6d; grainy sorts, 39s 9d to 43s 6d; crystallised, 43s to 45s per cwt. Some parcels have also changed hands by private contract.

Bengal.—The public sales have comprised 3,100 bags, of which the chief part sold: good to fine yellow Cossipore, 44s 6d to 46s 6d; other grainy sorts, 43s 6d to 45s 6d; Gurpatta date, 42s to 45s 6d; soft grainy brown, 40s 6d per cwt.

Madras.—Privately, the lower qualities are more inquired after. Dark Jaggery has sold at 31s to 33s 6d. By auction, 3,603 bags about three-fourths sold: grocery, 41s 6d to 44s; soft brown and low yellow, 38s 6d to 39s 6d; soft date brown, 32s 6d to 33s per cwt.

Foreign.—By private contract, 3,300 boxes Havana have changed hands at 40s 6d to 45s 6d. 20,000 bags Manilla are reported sold at 38s 3d to 39s. 1,100 baskets Java, 38s 6d to 41s; and 2,400 bags Pernambuco at 38s 6d to 40s 6d. At public sale, 221 baskets grainy white Java (duty 18s 4d and 16s) realised 48s to 52s. 150 casks Cuba, 40s to 45s 6d for low to good yellow.

Refined.—The market is firmer, and business has been done at a slight recovery on the lowest quotations of last week. Common goods are now worth 49s 6d. Crushed and pieces command a more ready sale. The prices obtained, however, are still moderate, compared with good to fine raw sugars.

Molasses.—The sales here amount to 350 puns common to good West India, at 18s 6d to 19s 6d per cwt.

Rum continues very firm, prices having still an upward tendency. The transactions have not been very large, owing to the reduced supply and the high pretensions of holders. Good proof Leewards have sold at 1s 8d to 1s 9d; Demerara, 1s 11d to 2s 1d; hhds and barrels, 2s 3d to 2s 4d per gallon.

Coffee.—Further arrivals of considerable extent have taken place, and other vessels are shortly expected. The market has therefore become quiet pending the approaching large public sales. 700 bags native went at 62s 6d to 64s for ordinary to good ordinary. 574 casks 933 barrels and bags plantation, fine ordinary to good middling, 68s 6d to 76s, being about 1s decline. Some business is also reported privately on lower terms. 857 bags Rio sold at 58s to 62s 6d for ordinary to fair quality. A floating cargo of St Domingo sold at 63s 6d for the Mediterranean.

Cocoa.—The few orders executed in colonial descriptions have been at previous rates.

Tea.—Since the public sales last week the market has not exhibited any further change. The trade have gone on buying, and quotations are about the same. Yesterday, less inquiry prevailed.

Sago.—A large business has been done this week, at rather higher rates.

Sago Flour has advanced considerably, latterly selling at 18s 9d per cwt.

Spices.—Cassia lignea is in steady demand, and rather higher. By auction, 569 boxes sold at 90s to 94s for good, and 86s for ordinary coarse. 100 cases from Japan realised 40s to 44s per cwt. 1,829 bags Singapore black pepper realised 4d to 4¼d: 681 bags good Alleppy were bought in at 4½d. No further change has taken place in white. Pimento keeps steady. Of 1,189 bags in public sale, a considerable portion found buyers at 3⅛d to 3⅜d. Zanzibar cloves are higher: several parcels have sold by private contract at 3¾d to 3⅞d cash, and subsequently at 4d per lb.

Rice.—The announcement that the French duty will be reduced gave a further stimulus to the demand, and very extensive sales have been made in pinky Madras, as well as soft grain descriptions, at 3d to 6d advance. Latest quotations obtained were as follows:—New Necrancie Arracan, 11s 4½d to 11s 6d; other soft grain descriptions, 9s 9d to 11s 3d; common Ballam, 11s 3d; pinky Madras, 11s 6d to 12s; Ballam, 11s 3d; white Bengal, 11s 6d to 15s. 400 tons pinky Madras afloat are reported at 11s 6d *ex ship*, or 12s landed, quality guaranteed.

Imports and Deliveries of Rice to October 20, with Stocks on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons

Exported	8600	17200	19000	34300
Stock	44200	72200	89300	57600

Saltpetre.—This article remains very firm, and holders generally are asking rather higher prices. By private contract, a few parcels have sold at stiffer prices, Bengal of middling to fine quality ranging from 40s 9d to 44s, refraction 10½ to 2⅜. 1,200 bags Bombay have sold for arrival at 38s 6d. A small parcel of Japan, by auction, brought 43s to 43s 6d per cwt for 2½ to 1¾ per cent. refraction.

Imports and Deliveries of Saltpetre to October 20, with Stocks on hand.

Nitrate of Soda.—A floating cargo has been sold for the Continent at 13s 6d, and 325 tons on the spot at 13s to 14s per cwt.

Cochineal.—58 bags Teneriffe partly sold: silver, 3s 1d to 3s 2d; black, 3s 2d to 3s 7d per lb, being about the previous value.

Dyewoods.—73 tons Brazil partly sold: logs and ordinary quality, 19*l* to 25*l*; pile 1 at 70*l*. A cargo of St Domingo is reported at 5*l* 7s 6d. Red Sanders has sold at 5*l* 17s 6d per ton.

Dyestuffs.—Further business has been done in Bengal safflower of the new crop at easier rates: common to fine, 6*l* to 8*l* 2s 6d. Cutch is quiet at 26s to 26s 6d. No change in Gambier, and there are few sellers at 17s 6d. Bombay madder roots sold at 30s per cwt.

Japan Wax.—Of 11,914 boxes Japan in public sale, about one-third part sold at 60s to 66s 6d per cwt.

Rubber.—East India is rather lower with increased supplies, 2s to 2s 0½d per lb having been accepted. Good Para sold at 2s 8d per lb.

Metals.—Only moderate sales have taken place this week. British iron keeps steady. The latest transactions in Scotch pig were at 52s 6d per ton for mixed Nos. Foreign tin is not influenced by the more favourable advices received from Holland, but quotations remain firm: Straits, 131s per cwt. A few contracts have been made in spelter at 19*l* 12s 6d to 19*l* 15s on the spot and for arrival. No change has occurred in copper or lead.

Hemp.—Petersburg clean, after advancing to 32*l*, is still very firm. Manilla meets with inquiries: sales have been made at 22*l* to 24*l* 10s for roping qualities. The jute market has become quiet; and at the sales, on Wednesday, 2,130 bales only partly sold at previous rates: middling to very good, 13*l* 10s to 18*l* 15s per ton.

Hides.—94,000 East India brought forward yesterday sold at about former prices.

Oils.—Sperm hardly maintains the recent advance; colonial, 103*l* to 104*l*. Pale seal is quoted at 36*l* per tun. Olive dull. Cocoa-nut oil sells less freely, owing to heavy arrivals; holders, however, are firm, asking 53s to 53s 6d for Cohin, and 51s for Ceylon. Palm is in moderate request at 47s 6d. Linseed oil has declined to 30s. Rape oil dull and lower: foreign refined, 45s; brown, 42s per cwt on the spot and forward.

Linseed.—3,000 tons Calcutta to arrive have sold at 57s to 58s. Black Sea and Azoff afloat command 56s 6d to 57s per quarter. Quotations for parcels on the spot are unchanged.

Turpentine.—A large business has been done in spirits, at 31s per cwt for American.

Tallow.—The price of foreign has varied slightly during the week, and the tone of the market is now rather quiet. Speculators, however, appear firm: Y.C., 59s 3d on the spot; 59s to the end of the year and for spring delivery rather sellers. Large arrivals are close at hand, and consumers buy very sparingly.

Particulars of Tallow.—Monday, October 22.

POSTSCRIPT. Friday Evening.

Sugar.—The market was very firm to-day, and some kinds ruled 6d higher. 3,500 casks West India have sold this week, including the parcels offered to-day. At public sales of East India, 1,630 bags Madras, 3,005 bags low ditto, and 2,623 bags Bengal found buyers at the full valuations. Privately, many parcels of colonial changed hands, making an aggregate of 8,000 bags. 900 boxes Havana are reported. 2,000 bags more Manilla, and a cargo of Porto Rico here at 43s 3d per cwt.

Coffee.—6,026 casks 580 barrels and bags plantation Ceylon sold steadily at about yesterday's decline. 545 bags good ordinary native, at 63s per cwt, went rather cheaper.

Cocoa.—354 bags Trinidad sold at 68s to 74s per cwt.

Rice.—The sales amount to 20,000 bags by private contract.

Saltpetre.—188 bags Bombay, refraction 7¼ to 7, brought 40s 6d per cwt.

Safflower.—120 bales Bengal sold from 5*l* 7s 6d to 7*l* 15s.

Cochineal.—161 bags partly sold: Honduras silver, 2s 9d to 3s 4d; black, 3s 3d to 4s 9d; Teneriffe silver, 3s 1d to 3s 2d; black, 3s 3d to 3s 7d per lb.

Camphor declined to 6*l* 10s per cwt.

Oil.—Seal part sold at 31*l* to 35*l* 10s for brown to tinged. 115 tons sperm were bought in. 2,643 tubs Japan fish bought 27*l* 5s to 31*l* 5s per tun. Palm was chiefly taken in at 44s to 47s 9d per cwt.

Tallow.—By auction, 474 casks South American went at 53s 9d to 58s 6d. Y.C. rather cheaper, viz, 58s 9d to 59s per cwt. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined goods remains unaltered, but some description of unstoved are about 6d dearer since our last. 100 tons of B & H, No. 1 crushed sugar have been sold at 32s in barrels f. o. b. at Amsterdam.

Green Fruit.—Demand good, and the parcels of the new crop are taken off the market on arrival. Some Malaga lemons sold by Keeling and Hunt at public sale realised a high figure, the article being scarce. The cargoes of new black Spanish nuts have arrived, and declined 5s per barrel from the opening price. The crop of Almeria grapes will be better than that of last year; some parcels are daily expected.

Dry Fruit.—Currants during the week have been only in moderate demand; the very large arrivals have not visibly affected the market. The lowest price of new currants is 25s, at which several sales have been made. The chief demand has been on fruit at 28s to 29s; but a fair attention has been paid to very superior quality over 30s, which proves to be very scarce. Low new fruit is the principal description now afloat, as proved by recent arrivals, and fine is very scarce. Sultanas are in very little request. Turkey figs sold at auction at full rates, and, in many instances, at small advances. Spanish figs worth 23s. Elemes raisins have been sold for export at 40s. Valentia raisins are selling in retail quantities at 35s to 37s; and the trade buy very cautiously, as large parcels are afloat, and about 7,000 tons still remain unshipped, notwithstanding the large shipments to America, portions of which, however, it is said, will come on shortly to this country.

Wool.—The market remains firm. The next sales will probably commence on the 15th November, for which the quantity is likely to be about 40,000 bales, of which at least half will be Cape wool.

Flax market firm.

Hemp.—A large business has been done this week in this article, and the market closes very firm.

COTTON.—Sales of cotton wool from Friday, 19th October, to Thursday 25th, inclusive:—900 bales Surat, at 4⅞d to 4⅞d for fully fair Dhollera and Oomrawattee; 5d for good fair new Dhollera; 5¼d for good new sawginned; and 5¼d for good fair new Broach: 1,400 bales Madras, at 5d to 5¼d for fair to good fair Tinnevelly; and 3⅞d to 4⅜d for middling fair to fully fair Western. In the early part of the week the transactions were limited, but prices were well maintained. Yesterday there was an active demand for Western Madras, and about 1,000 bales were sold at 3⅞d to 4¼d per lb, middling fair to fully fair being ⅛d per lb advance, the market closes steadily. P.S.—No sales reported to-day.

TOBACCO.—The market has presented a decidedly firm appearance, and outside quotations have been paid for a few small lots of good to fine descriptions. Sales chiefly limited to selections for immediate consumption.

TIMBER.—The wood market is very dull; prices range so high that consumers take their supplies very sparingly. There is abundant stock of every variety of foreign and colonial deals and battens; but a decidedly short supply of Baltic fir timber.

HIDES AND LEATHER.—The same inactivity, which we have for many weeks past stated to be the position of the leather market, still continues, and until the opposition caused by the sale of bankrupts' stocks shall have ceased, we cannot expect much improvement; but as a considerable part of those stocks is now sold, we may hope soon to be able to report a more cheerful trade. The only article we can say is much inquired for this week is strong crop bellies, which are scarce. At the public sales this week, 10,000 salted Australian hides were sold—20,000 were offered—at about previous rates: heavy at 5d to 5¼d; light, 4¼d to 4½d; seconds, 3½d to 4d. The whole of the Cape hides (4,200) were sold at 5d to 6½d; seconds, 3½d to 4½d; thirds, 2½d to 2¾d. 2,300 salted River Plate horse hides (30 lbs to 32 lbs), at 10s to 10s 2d. 1,200 Mogadora kips, 5½d to 6d; seconds, 3½d to 4d. Of 95,000 East India kips, 68,300 were sold, generally at the prices of the previous sale. Not any River Plate hides were offered.

METALS.—The course of business in metals has varied but slightly. Copper is dull of sale, with rather a downward tendency in prices. Iron is somewhat stiffer in quotations in Wales in consequence of a rather better demand, and Scotch pig has advanced 6d to 1s per ton. Tin is nominally unchanged, but prices of foreign are perhaps a shade easier. Spelter keeps quiet at last week's quotations. Lead is in moderate demand. Tin plates continue rather inanimate.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	61	9
Fat by ditto	3	2
Yellow Russian	61	0
Melted stuff	44	6
Rough ditto	27	0
Greaves	20	0
Good drags	7	0

Imports this week 3,837 casks.

PROVISIONS.

No alteration in the Irish bacon market this week; our last quotations were firmly maintained. Hamburg a shade easier. Friesland butter, though selling at the same price here, is rising in the Dutch markets, first quality making at Sneek and Harlingen 52 guilders.

METROPOLITAN CATTLE MARKET.

THURSDAY, Oct. 25.—Notwithstanding that the supply of beasts in today's market was limited, the demand for all breeds ruled heavy in the extreme at almost nominal currencies. We were scantily supplied with sheep; nevertheless, the mutton trade was in a depressed state at barely Monday's decline in the quotations. For calves—the show of which was good—the inquiry was much restricted, at a further decline in value of from 2d to 4d per 8 lbs.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	6	2	8	Prime Southdown sheep	4	10	5	2
Second quality ditto	2	10	3	4	Large coarse calves	3	8	4	2

Prime Scots, &c.	4	4	4	6	Large hogs	4	0	4	6
Coarse and inferior sheep	3	0	3	4	Small porkers	4	8	5	4
Second quality ditto	3	6	4	0	Sucking calves...each	19	0	23	0
Prime coarse-woolled do.	4	2	4	8	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 850; sheep and lambs, 4,500; calves, 450; pigs, 360.
Foreign supply—Beasts, 440; sheep, 1,200; calves, 280.

NEWGATE AND LEADENHALL.

FRIDAY, Oct. 26.—Our markets continue to be heavily supplied with all kinds of meat. The trade generally is heavy at further depressed rates.

Per 8 lbs by the carcase.

	s	d	s	d		s	d	s	d
Inferior beef	2	0	2	6	Mutton, inferior	2	3	3	4
Middling ditto	2	8	3	4	— middling	3	6	3	10
Prime large	3	6	3	8	— prime	4	0	4	2
Prime small	3	10	4	0	Large pork	3	10	4	6
Veal	3	10	4	2	Small pork	4	10	5	4

HOP MARKET.

BOROUGH, Monday, Oct. 22.—Our market during the past week has been very quiet, and but few hops of any description have been sold. Prices for the new growth are rather depressed; yearlings and hops of earlier date maintain recent rates. The duty has advanced to 45,000*l*. Our currency is as follows:—Mid and East Kents, 18*l*, 22*l*, 28*l*; Weald of Kents, 14*l*, 17*l*, 21*l*; Sussex, 10*l*, 14*l*, 16*l*; Yearlings, 7*l*, 9*l* 9*s*, 12*l* 12*s*.

FRIDAY, Oct. 26.—There is a steady consumptive demand at firm rates. Duty, 45,000*l*.

POTATO MARKETS.

WATERSIDE, Thursday, Oct. 25.—The arrivals of home produce have rather increased since our last report, and the supplies in consequence are better. Trade continues active at the subjoined prices:—York Regents, from 120s to 140s; Kent and Essex ditto, from 120s to 150s; Scotch ditto, from 130s to 140s; Dunbars, 130s to 140s; French, 120s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 5*l* 15s; clover, 3*l* 10s to 6*l* 0s; and straw, 1*l* 10s to 1*l* 16s per load. A slow trade.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 5*l* 12s; clover, 3*l* 10s to 6*l* 0s; and straw, 1*l* 10s to 1*l* 16s per load. A heavy demand.

COAL MARKET.

FRIDAY, Oct. 26.—Wall's-end:—Haswell 20s 3d—Trimdon Hartlepool 18s 3d—Russell's Hetton 19s 6d—South Hartlepool 19s—Cassop 19s 6d—Eden 19s—Whitworth 16s 6d—Holywell 17s—Wylam 17s—Hasting's Hartley 16s 9d—Lambert's Hartley 16s 6d. Ships at market, 46.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 26.—There is a moderate amount of business doing, and prices continue, on the whole, well supported, considering that of some descriptions of foreign there is now a fair stock in this market.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 26.—Market moderately attended. Good business in wheat, at fully last Tuesday's rates. Flour less active, prices unchanged. Indian corn and beans steady, but less business doing. Barley, beans, oats, and oatmeal quiet, at former prices.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Oct. 26.—There has been a very quiet market for all descriptions of manufactured iron during the past week, and with little or no change to note in prices. In Scotch pig iron there has been little disposition to operate, and, during the week, prices have slightly fluctuated. For copper there has been a very limited demand beyond the usual requirements for home consumption. Most other metals are dull of sale.

The Gazette.

TUESDAY, Oct. 23.

BANKRUPTCY ANNULLED.

J. H. Cohen, Riches court, Lime street, East India merchant.

BANKRUPTS.

H. A. T. Fowler, F. E. T. Fowler, J. Stubbs, and W. G. Dunt, Exeter street, Strand, newspaper proprietors.

A. M'Fie, tanner, Kilmarnock.
W. Dingwall, factor, Ramornie, Fifeshire.
J. Johnston, provision merchant, Maxwelltown.
J. Campbell joiner, Rothesay.
J. Johnson and Co., potters, Glasgow.

DRURY LANE THEATRE.—During the present week Mr Charles Mathews has had hard work to do at Drury Lane. First in order of the performance comes the "Game of Speculation," rendered more famous in London by his masterly representation of Mr Affable Hawk than the original piece, "Mercadet," in the French metropolis. "Little Toddlekins," another old favourite of his Lyceum days, comes last, and inserted between the comedy and the farce is a trifling "commedietta" called "Cherry and Blue." A smart Abigail, played by Mrs Charles Mathews, conduces much to the success of the piece. A new comedy, in which Mr and Mrs Charles Mathews will sustain the principal characters, is announced for Monday.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Oct. 13 amounted to 552,830*l*, and for the corresponding week of last year to 528,350*l*, showing an increase of 24,480*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 242,232*l*, and for the corresponding week of 1859 to 237,909*l*, showing an increase of 4,323*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Oct. 22.—The railway market was flat in the morning, and in several cases a decline took place, but later in the day there was a recovery. In the colonial market, Grand Trunk of Canada stock receded to 27½ to ¾. Indian guaranteed descriptions were also rather dull. Scarcely any change occurred in foreign railways. South Austrian and Lombardo-Venetian, however, were slightly better at ¾ discount. In American railway securities the shares of the New York and Erie advanced. Mines were quiet, but firm. London Chartered Bank of Australia shares were higher. In miscellaneous descriptions Peninsular and Oriental Steam improved, while a reduction took place in Royal Mail Steam and London General Omnibus. Victoria debentures, new, were last quoted 106; Canadian Five per Cents., 104.

TUESDAY, Oct. 23.—The railway market was dull during the greater part of the day, but improved after regular hours. North-Eastern, North British, and South-Eastern, however, remained depressed, the latter especially, having fallen fully ½ per cent. Indian guaranteed stocks were firmer, while Canadian were flat. Grand Trunk receded to 26½ to 27, and Great Western to 13¾. In foreign descriptions, South Austrian and Lombardo-Venetian shares advanced after official hours to ¾ to ⅞ discount; and Great Luxembourg were steady at 6½ to ⅞. Pernambuco slightly declined. American railway securities closed about the same as yesterday. There were few transactions in mines, and the general tendency was rather flat. In joint stock banks, Commercial of London improved. Miscellaneous descriptions were dull, Australian Agricultural shares and Electric Telegraph stock in particular showing a reduction. Victoria debentures, new, were last quoted 106; Canadian Five per Cents., 104.

WEDNESDAY, Oct. 24.—The railway market to-day was inactive, and little change took place. Midland and Lancashire and Yorkshire continued the firmest stocks, especially the former. In the colonial market, Grand Trunk of Canada was again heavy. No alteration of importance occurred in Continental or American railway securities. South Austrian and Lombardo-Venetian shares remained at ¾ to ⅞ dis. Business in mines was limited, but in one or two instances an advance took place. Bank shares were in fair demand and firm, especially Oriental. In miscellaneous descriptions, London and National Discount and London General Omnibus improved, while Canada Land were quoted lower. Great Ship shares showed more steadiness at 5s to 5s 6d. Victoria debentures, new, left off at 106 to ¼; Canadian Five per Cents., 104.

THURSDAY, Oct. 25.—The railway market was firm at the opening, but in the afternoon a decline took place, from which there was no recovery. Nearly all the leading British stocks left off ¼ to ¾ per cent. lower than yesterday, South-Eastern and Eastern Counties being the heaviest. In the colonial market a fall took place in the ordinary and preference stocks and debentures of the Grand Trunk of Canada; Atlantic and St Lawrence shares also receded. Foreign descriptions were heavy. South Austrian and Lombardo-Venetian declined to ¾ dis.; Great Luxembourg to 6½; Pernambuco, 3½ to 3 dis.; and Bahia, 1½ to 1 dis. In American railway securities, Illinois Central shares advanced. New York and Erie descriptions were likewise firm. Mines were quiet at an occasional reduction. In joint stock banks, Ottoman improved to 17½ to 18. In miscellaneous descriptions there was a rise in Canada Land and London General Omnibus. Victoria debentures, new, were last quoted 106; Canadian Five per Cents., 104.

FRIDAY, Oct. 26.—The railway share market to-day was rather flat. Most of the principal stocks exhibited a reduction of about ¼ per cent. Great Northern, however, was rather firmer, and Great Western and London and North-Western exhibited little alteration. Present quotations were as follows:—London and North-Western stock, 100¼ to ⅜; Great Western, 72⅜ to ⅝; Midland, 133½ to ¾; Lancashire and Yorkshire, 117½ to 118; South-Eastern, 81⅛ to ¼; Great Northern, 114¼ to 115½; Eastern Counties, 52½ to ¾; and Caledonian, 91½ to ¾. Lombardo-Venetian Railway shares were steady, at ⅝ to ⅞ dis. Grand Trunk of Canada and Pernambuco railway shares continued heavy.

LYCEUM THEATRE.—The new drama, entitled the "Pioneers of America," is a piece of Transatlantic workmanship put together, not with much compactness, for the purpose of providing Mr Watkins with a negro character, usually comic in expression, but thoroughly melodramatic in action. Mr H. Watkins's impersonation of Jocko is really worth seeing, though the piece itself has no pretension to rank even with the humblest transpontine melodrama.

The Economist's Railway and Mining Share List.

WHEATSTONE and CO., 20 Conduit street, Regent street, W.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for WALKING, RIDING, TRAVELLING, and BUSINESS. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s. To be obtained of E. MOSES and SON, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET; And Bradford and Sheffield, Yorkshire.

The Establishments are closed every Friday evening at sunset until Saturday sunset, when business is resumed till 11 o'clock.

DR DE JONGH'S (Knight of the Order of Leopold of Belgium) LIGHT-BROWN COD LIVER OIL. Prescribed by the most Eminent Medical Men as the safest, speediest, and most effectual remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners, prove that a half-pint of Dr de Jongh's Oil is far more efficacious than a quart of any other kind. Hence, as it is incomparably the best, so it is likewise unquestionably the cheapest.

Palatableness, speedy efficacy, safety, and economy, unitedly recommend this unrivalled preparation to invalids. NO OTHER OIL CAN POSSIBLY PRODUCE THE SAME BENEFICIAL RESULTS.

Opinion of Sir HENRY MARSH, Bart., M.D., T.C.D., Physician in Ordinary to the Queen, in Ireland; President of the Royal College of Physicians in Ireland; Visiting Physician to Steevens' Hospital; Consulting Physician to the City of Dublin, St. Vincent, and Rotunda Hospitals, &c., &c.

"I have frequently prescribed Dr de Jongh's Light Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value.

"Merrion Square, Dublin,
"September 0, 1860."

Sold ONLY in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s., capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNEES, ANSAR, HARFORD, and CO., 77, STRAND, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DR ROBERT ROWE ON INDIGESTION.
This day is published, price 2s 6d, the fifteenth edition,
NERVOUS DISEASES,
Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.
By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.
"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.
"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.
Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.
London: J. Churchill, and to be had of all booksellers

NO MORE PILLS OR ANY other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.

We extract a few out of 56,000 cures:—
Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeomen, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.
Similar testimonials from 56,000 patients who can be referred to.
The food is sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

HOLLOWAY'S PILLS.—Autumn Ailments.—There are diseases peculiar to each season; but Autumn usually much increases the sick list. Fever, diarrhœa, cholera, and many chest complaints frequently prevail at this time. Purifying the blood is the most rational and certain antidote to all of them. This can be accomplished most readily and effectually by a course of Holloway's estimable Pills, which act directly by expelling all impurities, and healthily stimulating every organ. They wonderfully assist digestion and promote wholesome activity in the kidneys, liver, and lungs, and strengthen the nerves. These Pills may be taken with benefit and safety by all invalids, whatever be the malady, for their purifying and harmless nature admirably adapts them to all ages, constitutions, and climates.

DR BUCHAN'S PATENT SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 22 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Prout, 229 Strand, &c., &c.
Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

A BOON TO NERVOUS SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER, 228 Piccadilly, London

DR KAHN'S ANATOMICAL MUSEUM, opposite the Haymarket. Open Daily from Twelve to Five, and from Seven till Ten.
Programme of Lectures for October.
Three and Eight o'clock.—Ill effects of various avocations upon Health, with Pictorial Illustrations shown by the Oxyhydrogen Light and the Oxyhydrogen Microscope. Nine o'clock: Half-an-hour with the Mediums and Spirit Rappers, with numerous experiments.
Admission, One Shilling.
Dr Kahn's "Philosophy of Marriage," and his new work on "Women, specially considered in her relation to the Married State."
Published by Allen, Paternoster row, E.C., and 20 Warwick lane, price One Shilling each; or either sent free by post for 18 stamps direct from the Author.—Address, 17 Harley street, Cavendish square, W.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. H. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Free for Six Stamps.
ENGLISH, FRENCH, AND AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

HUNT'S APERIENT FAMILY PILLS.
Prepared by qualified Medical Men, and have now been in use with the Public for more than 50 years.
The testimonies to their salutary qualities have been most numerous and decisive. They require no confinement from ordinary business, and, indeed, exercise promotes their good effects.
As a mild and effectual remedy in those various forms of disordered health that are sure to occur occasionally with every one, and indicated by Pains in the Head and Limbs, Influenza, Disordered Stomach, Fever, Bilious Attacks, Indigestion, Heartburn, and the like, this Medicine has proved, to persons of all ages and both sexes, most convenient and timely, and a truly valuable means of warding off those attacks of sickness and disease that are the cause to individuals and families of so much suffering and expense.
Prepared by Messrs Hunt, 47 Pulteney street, Bath, and may be obtained at medical establishments throughout the kingdom at 1s 1½d a box, or at 2s 9d, which contains three boxes.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscope examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion
MR CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.
Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

Just published, 71st thousand, price 1s, post free for 13 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.
DR LA'MERT ON SPERMATORRHŒA; an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.
CONTENTS.
SECTION I.—The Physiology of the Generative Organs.
SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.
SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.
SECTION V.—Spermatorrhœa, or Chronic Impotence: its History, Causes, and Moral Consequences—The Sterility of Age.
Dr LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.
37 Bedford square, London.

CURE OF COUGHS, COLDS, ASTHMA, by Dr LOCOCK'S PULMONIC WAFERS.—From Mr William J. Dale, Chemist, 65 Queen street, Portsea:—"Gentlemen,—From the immense sale I have had of Dr Locock's Pulmonic Wafers throughout this populous locality, I must do you the justice to say that I consider them invaluable for coughs, colds, asthma, &c., and the overflowing testimony I have received voluntarily from all classes who have benefited by their virtues fully warrants me in stating the above. (Signed) W. J. DALE." Dr Locock's Pulmonic Wafers give instant relief, and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To Singers and Public Speakers they are invaluable for clearing and strengthening the voice. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all chemists.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other Paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

CANDLES, SOAPS, OILS, AND NIGHT LIGHTS of all kinds. Five pounds worth sent free by railway.—WHITMORE and CRADDOCK, 2 Bishopsgate street within, London, E.C. (Lists of prices on applications.)

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or Continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

NOTICE.—"BEWARE OF IMITATIONS."

LEA AND PERRINS' "WORCESTERSHIRE SAUCE"

is pronounced by Connoisseurs to be a most agreeable addition to every variety of dish.

*** See the names of Lea and Perrins upon every label, bottle, and stopper.

Sold by Messrs Crosse and Blackwell, London; and by dealers in sauces generally.

Sole Manufacturers—
LEA and PERRINS, WORCESTER.

SOYER'S SULTANA SAUCE

Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd. It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-plug can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

---

POMMERY'S CHAMPAGNE.—Extra Sorts Creaming and Sparkling.—Agents in London, A. Knicp and Co., 22 Basinghall street; Paris, 18 Boulevart des Italiens.

BASS'S EAST INDIA PALE ALE.—The October brewings are arriving from Burton in 18 gallon casks. The ale in bottle is also in good condition.—BERRY, BROS., and CO., 3 St James's street, S.W.

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross.
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining roofs of houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instruction on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

FIRST-CLASS EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical (preparatory to Harrow and Eton) and commercial school, it is also highly recommended for a thorough French education, and as preferable to going abroad. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. No corporal punishment. Terms inclusive, and vary according to age and requirements, from £40, £50, to £60 per annum. Not one case of illness has occurred since the school has been established.—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming, but optional to parents.

FREDERICK DENT, Chronometer, Watch, and Clock Maker to the Queen and Prince Consort, and maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange.

ROBIN HOOD.—The new and highly successful Opera, by G. A. MACFARREN, at Her Majesty's Theatre.

Publishers: Cramer, Beale, and Co., 201 Regent stree

TRADE B/P MARK.

BROWN AND POLSON'S PATENT CORN FLOUR.

The LANCET states,

"This is superior to anything of the kind known."

FIRST OF THE KIND Manufactured and Patented in the United Kingdom and France, as explained with Engravings in THE ILLUSTRATED LONDON NEWS, of May 26th. Supplied by BROWN and POLSON, to Her Majesty the Queen, by order from Buckingham Palace. It is in great favour wherever it has been made known, for Puddings, Blancmange, &c., preferred to the best arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers and Purveyors to Her Majesty: Paisley, Manchester, Dublin, and London.

LE SOMMIER ELASTIQUE PORTATIF.

HEAL AND SON have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome.

The "SOMMIER ELASTIQUE PORTATIF" is made in three separate parts, and when joined together has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse hair, it cannot harbour moth, to which the usual Spring Mattress is very liable; the prices, also, are much below those of the best Spring Mattresses, viz:—

			£	s	d
3 ft wide by 6 ft 4 in.	long	.....	2	5	0
3 ft 6 in.	—	—	2	10	0
4 ft	—	—	2	15	0
4 ft 6 in.	—	—	3	0	0
5 ft	—	—	3	5	0
5 ft 6 in.	—	—	3	10	0

The "SOMMIER ELASTIQUE PORTATIF," therefore, combines the advantages of elasticity, durability, cleanliness, portability, and cheapness.

An Illustrated Catalogue of Bedsteads, Bedding, and Bed-Room Furniture sent free by post on application.

HEAL and SON, 196 Tottenham court road, W.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchel — Mr W. Duncan Davison
Mr W. R. Sams — Mr Jules Benedict
Mr Thomas Chappell — Mr A. Blumenthal

SOLICITORS—Messrs Young, Jones, and Vallings, St Mildred's court.

BROKERS—Messrs George Barnard and Co., 69 Lombard street.

SECRETARY—Mr John Henry Koch.

TEMPORARY OFFICES—185 Gresham House, Old Broad street, E.C.

This Company is formed for the purpose of purchasing and working, on a more extended scale, a valuable Silver Lead Mine, called Wheal Ellen, situated in the Mount Barker Electoral District of South Australia, which has been profitably worked by the present proprietors since 1857, and which only requires the application of further capital to render it one of the most productive and profitable mines in the colony. The present proprietors are induced to sell by the inadequacy of their individual resources, but they purpose to retain a considerable interest in the Company.

Extent of the Property.—The property comprises a freehold estate of about 700 acres, furnishing ample supplies of timber, and possessing excellent roads and facilities of transit, being situated about thirty miles from Adelaide, and only fifteen miles from a place of shipment.

In addition to this property, the proprietors possess the timber, and a right to one-half of the minerals on two adjoining sections, comprising together about 250 acres; and they also hold a provisional lease for 11 years, unexpired, of a further section adjoining the mine, and now occupied by part of the dressing machinery.

The lode has been worked upon already to a depth of 65 fathoms, and has been found to average in width three to five feet of solid ore, and to produce an average of five tons of carbonates, and eight to ten tons of the galena ore per fathom. Upwards of 2,000 tons of lead ore, containing, in addition to the lead, 30,000 ounces of silver, have been obtained, on the sale of which, a profit has resulted of £11,000. This, however, is the result of about eighteen months' actual working, the raising and realising of the ore not having been continuously carried on. The lode hitherto has been found to increase in value as it descends, and, from the reports of the mine captains, there is no doubt that the resources of the mine are only just beginning to be developed.

Reserves of Ore.—The reserves of carbonate and mixed galena and blende ore now standing ready to be taken away, or existing above the present levels, have been estimated at about 4,000 tons, representing a gross value of £30,000, and calculated to yield a net profit of nearly one-half. These reserves are immediately available. Large masses of auriferous gossan are also now lying upon great part of the length of the lode, which has been sunk upon to a depth of twenty fathoms. Specimens have been assayed by Messrs Johnson and Sons, and show an average produce of four ounces per ton. The attention of the present owners has hitherto been directed mainly to developing the mine, and hence these auriferous ores have but recently engaged their attention; except that where they have been used as fluxes in the reduction of the other ores, the metals thus obtained have yielded profitable returns of gold. Instructions for proving them independently have now, however, been given, and there is every probability that as soon as suitable machinery shall be erected, the treatment of this mineral will result in a large revenue to the Company. The vendors estimate a minimum profit of £15,000 from these several sources.

Expenses on Ores.—The cost of bringing the ores to market in England, including raising, cartage, agency, freight, insurance, dock charges, &c., and allowing 5 per cent. for estimated loss of weight in transit, may be stated at £4 5s per ton; and taking the average selling value of the reserves at £7 10s per ton, a net profit is left of over £3 per ton. By smelting on the spot, this profit would manifestly be greatly augmented; the transit charges on ore of such produce being high in proportion to value.

These figures, however, apply only to the working of the present reserves. The ascertained improvement of the ore in depth will replace them by increased values, and a correspondingly augmented profit. Specimens from the lowest level at which the lode has been cut have been assayed by Messrs Johnson and Sons, and show—Lead, 50 per cent.; silver, 45½ ounces per ton, worth in England about £20 per ton.

Amount already expended on the Property.—The present owners, up to the end of last year, had expended a total sum of £35,000; £27,000 of which represents their outlay for the purchase of the various properties, and the erection of the extensive plant and machinery, together with the underground work requisite for the establishment and permanent continuance of the mine; and the remaining £8,000 has been expended on the raising and removing the ores sold.

Acquirement of the Property.—The mine, plant, and machinery, with the reserves of ore, and all the various properties before mentioned, will be transferred to this Company for the sum of £35,000, half in cash and half in shares, the payment to be subject to a survey and report on the part of the purchasers. It is estimated that the sum of £25,000 will be amply sufficient for working capital, and for the erection of all necessary farther plant.

Prospects of the Undertaking.—It is not often that an undertaking is brought forward presenting such promising indications of success as are presented by this Company. The reserves of ore standing in the mine are immediately available, and there can be no doubt that within a few months after the Company has commenced working, dividends will be paid. The Directors believe that the auriferous ores alone, on confirmation of the assays obtained, will pay a handsome return on the capital of the Company.

Applications for shares must be accompanied with a deposit of £1 per share, in part payment of the deposit of £2 10s per share. Should the amount so paid exceed £2 10s per share on the number allotted, the surplus will be returned, but if it falls short, the balance must be paid, on allotment, or in default the allotment will be cancelled. If no allotment be made, the deposit will be returned without deduction.

Prospectuses and forms of application can be obtained at the offices of the Company, where plans of the property, sections of the mine, valuations and inventories of the buildings, plant, stock, and machinery, together with specimens and analyses of the ores, and account sales of produce already sold, can be seen.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Wheal Ellen Mining Company (Limited).

Gentlemen,—Having paid to your bankers the sum of £ , I hereby request that you will allot me shares of £5 each, in the "Wheal Ellen Mining Company, Limited," and I hereby agree to accept such shares, or any smaller number that may be allotted to me, and to pay the remainder of the deposit of £2 10s on the shares allotted, and to sign the articles of association when required.—I am, Gentlemen,

Name in full.....

Date .....

NOTICE.

WHEAL ELLEN MINING COMPANY (Limited) of SOUTH AUSTRALIA.

No application for Scares can be received after Thursday, 1st November.—By order,

JOHN H. KOCH, Secretary.

185 Gresham House, Old Broad street,
London, Oct. 27, 1860.

BRITISH SYRIAN RELIEF FUND.

PRESIDENT—Lord Stratford de Redcliffe.

CHAIRMAN OF THE EXECUTIVE COMMITTEE—Sir Moses Montefiore, Bart

The Contributions of the benevolent throughout the United Kingdom are most earnestly solicited on behalf of the perishing multitudes, surviving victims of the late frightful massacres in Syria. The most recent official accounts received by the Committee are perfectly appalling, and unless the British public exert, in this emergency, their wonted beneficence, by contributing through the Committee money, and such material relief as must be required by the homeless, the naked, the starving, and the sick, the mortality among the sufferers, as winter approaches, will be frightfully extensive.

Donations of provisions, clothing, medicine, tents, &c., will be sent out free of expense, if addressed to the "British Syrian Relief Committee," at the Victoria Dock Warehouse, Steel yard, Upper Thames street, E. C.; or 4 York buildings, Liverpool. Persons sending goods are requested to inform by letter, the Secretary, Mr Cyrus Edmonds, 12 York buildings, Adelphi.

Offers to undertake needlework will be thankfully accepted, and the cut out Syrian patterns or materials may be obtained from the Ladies' Committee, by application to their Honorary Secretary, 12 York buildings, Adelphi, London.

The following Bankers receive Subscriptions to the Fund:—Messrs Barclay, Bevan, and Co.; Glyn and Co.; Roberts, Curtis, and Co.; Smith, Payne, and Co.; Williams, Deacon, and Co.; Roberts, Lubbock, and Co.; Dimsdale, Drewett, and Co.; Heywood, Kennard, and Co.; Ransom, Bouverie, and Co.; Child and Co.; Praed and Co.; Drummond and Co.; Coutts and Co.; Cocks and Co.; Cell, Marten, and Co.; and the following Banking Companies: The London and Westminster Bank, Lothbury, and all its branches; Union Bank; London Joint Stock Bank; London and County Bank; the National Bank of Ireland, and all its branches; the Ottoman Bank; the National Bank of Scotland, and all its branches; and Jones Lloyd and Co.

SIR C. E. EARDLEY, BART., } Hon. Secretaries.
SIR JAS. FERGUSSON, BART., }
J. P. KENNARD, ESQ., 4 Lombard street, Treasurer.
CYRUS R. EDMONDS, Secretary.
12 York buildings, Adelphi, W.C.

66 Queen street, London, 23rd August, 1860.

MESSRS R. WOTHERSPOON and CO., 46 Dunlop street, Glasgow,

DEAR SIRS,—I have, as requested, to-day visited the Royal Laundry, with reference to the advertisement of the Nottingham firm, who state that their starch has been used for many years in the Royal Laundry, and have been assured by Mr Thompson, the superintendent, that none but yourselves have any right to state that they supply starch to Her Majesty's Laundry, as no other starch is there used, nor has been used for some years, but the Glenfield Patent Starch. I have been further assured that your starch continues to give complete satisfaction, and that though trial has been made of samples of various starches, none of these have been found nearly equal in quality to the Glenfield.—I am, dear Sirs, your obedient servant, WM. BLACK.

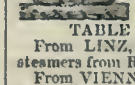
S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards Woolwich.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month; for Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Mauritius, Reunion, King George's Sound, Melbourne, and Sydney by the steamers leaving Southampton on the 20th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.



BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

CANADA, for BOSTON, Saturday, Nov. 3.
AFRICA, for NEW YORK direct, Saturday, Nov. 10.
ARABIA, for BOSTON, Saturday, Nov. 17.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, 8 Water street, Liverpool.

IMPERIAL AND ROYAL AUSTRIAN DANUBE STEAM NAVIGATION COMPANY OF VIENNA.

TABLE OF DEPARTURES FOR 1860.

From LINZ, in correspondence with the Bavarian steamers from RATISBON, daily, at 7 a.m.
From VIENNA to PRESBURG and PESTH, daily, at 6.30 a.m.
From VIENNA to SEMLIN, BELGRADE, and intermediate stations, Sunday, Tuesday, Thursday, and Friday, at 6.30 a.m.
From VIENNA to ORSOVA, Tuesday and Friday, at 6.30 a.m.
From VIENNA to the Lower Danube, GALATZ, ODESSA, and CONSTANTINOPLE:—

BY EXPRESS BOAT.

From VIENNA, every Sunday, at 6 a.m.
From PESTH, every Monday, at 7 a.m.
From ORSOVA, every Wednesday morning.
Arrival at GIURGEVO, every Wednesday morning.
Arrival at GALATZ, every Wednesday morning.
Arrival at ODESSA, every Saturday noon.

BY ORDINARY BOAT.

From VIENNA, every Friday, at 6.30 a.m.
From PESTH, every Saturday, at 6 a.m.
From ORSOVA, every Monday morning.
Arrival at GALATZ, every Wednesday.
Arrival at ODESSA, every Saturday morning.
Arrival at CONSTANTINOPLE, the following Saturday at noon.

N.B. For further particulars apply to
Messrs PIETRONI and DRAPER,
81 London Wall London, E. C.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Chief cabin, 2l; fore, 1l 5s.
HARBURG—Every Sunday.
ROTTERDAM—Every Tuesday, Thursday, and Saturday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 35s 6d or 19s 9d.
ANTWERP, BRUSSELS, and the RHINE—The Moselle and Dolphin every Tuesday and Thursday, at 11 morn. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at noon.
OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. Oct 27 at 12 noon; 31 at 2; Nov. 3 at 3. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.
HAVRE—From St Katharine's Wharf, every Thursday morning. Nov. 1 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, £1.
PARIS, via CALAIS, direct—From London Bridge Wharf, every Tuesday and Saturday morning. Oct. 27 at 12 noon; 31 at 1; Nov. 3 at 6; 7 at 7. Chief cabin, 14s; fore, 10s. London to Paris, 17s 8d.
BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. Oct. 28 at 12 noon; 30 at 1; Nov. 1 at 2; 2 at 3; 4 at 4. Chief cabin, 14s; fore, 10s. London to Paris, 16s.
EDINBURGH—From St Katharine's Wharf adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; return, 37s 6d; fore, 15s; return, 22s 6d; deck, 10s; which fares include all pier dues at London and Granton.
HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning. Chief cabin, 6s 6d return, 10s; fore cabin, 4s; return, 6s.
NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning. Chief cabin, 8s; return ticket, 12s; fore, 5s; return, 7s 6d.
YARMOUTH—From London Bridge Wharf, every Wednesday and Saturday, at Four afternoon. Saloon, 8s; return, 12s; fore cabin, 5s; return, 7s 6d.

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

The Political Economist.

The Memoir of the Right Honourable James Wilson, which has been announced, will be published in a Supplement to the ECONOMIST *of the 17th November. Owing to the necessity of communicating with India, it has not been found possible to fix an earlier date*

THE CAPRICIOUS INTERVENTION OF FRANCE IN NAPLES.

WHATEVER be the true interpretation to be put on the French intervention at Gaeta, it is in any case a reckless and unworthy act. It can have no result but one,—to increase the cost of the sacrifice which the siege of Gaeta will cause probably both to besiegers and besieged. We are assured by the *Morning Post* of yesterday that the French Government represent it "as simply an isolated act intended as a "personal kindness to spare the King of Naples the painful "necessity of surrendering as a prisoner to his own sub-"jects," and that therefore it "is not to be considered to in-"dicate any departure from the policy of non-intervention which "the Government of the Emperor of the French has hitherto "so wisely and honourably observed in Southern Italy." We trust this is the true explanation. It is certainly difficult to assign any intelligible reason for such a policy, and this is perhaps as good as any other *unintelligible* reason. But it is unintelligible. The practical effect of preventing Admiral Persano from bombarding Gaeta will probably be to prolong indefinitely the siege of that almost invincible fortress. The siege from the land side alone will certainly be difficult, and if the object of the French move be merely to secure the unfortunate Francis II. from the necessity of surrendering himself to his rival, a safe conduct for the ex-King and his suite might have been procured from Sardinia by the influence of France, and placed in the ex-King's hands to be used whenever he might consider his cause really lost, without this unjustifiable interruption of the necessary military operations of the siege. Gaeta is far stronger than Capua,—and till it has surrendered, it is exceedingly probable that even Capua will hold out. Blood enough has been shed fruitlessly already, and all Europe is eager for the natural termination of the Italian revolution and the quiet inauguration of Victor Emanuel's reign. If the Emperor of the French really wishes, as the *Constitutionnel* gives out, to be regarded as the "Moderator" of the Italian revolution, he could not do worse than delay the issue now so near. Every hour added to the struggle adds to the bitter memories of civil war; and while the French squadron practically defends Gaeta from the sea, and so sets all the garrison at liberty to combine their energies against their assailants on the land side, it must tend to prolong the civil war war by many painful days or even weeks.

We have written on the supposition that the only motive,—if it can be called so,—of this inexplicable attitude of the French Government, is that which the *Morning Post* assigns. As the explanation no doubt comes from the highest authority on French policy in this country, we are inclined to hope that it is entitled to credit. The dealings of France, however, with the Italian question have been so variable, and at times so threatening, that we are compelled to admit the *possibility* that some capricious move may still be intended,—some attempt to exhibit Italy as still completely at the mercy of France, and to gain the reputation of forbearance, if not anything more, by the policy she dictates. We cannot forget that only a few weeks ago the Duke de Gramont either was, or is supposed to have been, empowered positively to assure General Lamoriciere that any invasion of the Roman States by the Sardinian army would be forcibly resisted by France. The official journal of Rome prints the following despatch to General Lamoriciere as received by the latter on the 16th September :—

The Emperor has written from Marseilles to the King of Sardinia to inform him that, if the Piedmontese troops should enter the Pontifical territory, he will be obliged to oppose them; orders are already given for the embarkation of troops at Toulon, and they will be sent forward without delay. The Government of the Emperor will not tolerate the unjustifiable aggression of the Government of Sardinia. As Vice-Consul of France you will regulate your proceedings accordingly. (Signed) GRAMONT.

As eventually the Emperor did *not* oppose the entry of the Piedmontese, it may be, if this despatch is genuine, either that he had not made up his mind but wished the Duke de Gramont to write as if he had made up his mind, in order to prevent the Piedmontese move, or that he used the Duke de Gramont as a mere instrument to blind the Pontifical Government to the real wishes and intentions of France. But the actual adoption of the step in the case of Naples, which was only talked about in the case of the Roman States, cannot but throw some doubt over the theory that the Emperor has all along secretly supported Piedmont and intended to promote her ultimate triumph.

At all events, the movement is sufficiently equivocal to render it the duty of the English Press to speak out very strongly the conviction—we think we may say the determination—of the English people on this subject; and we do not hesitate to affirm that they are resolved, if needful, to *secure* for Italy full liberty to decide her own destiny as against the intervention of any non-Italian Power. Should the intervention of France at Gaeta prove to have,—as we trust and think it will not,—any serious meaning, it cannot but result in a complete breach between England and France, in a quarrel which can scarcely fail to have serious consequences.

There is no question of foreign policy in which the popular mind of England has taken so deep an interest since the peace of 1815, as the Italian revolution. Englishmen looked on coldly at first only because they saw that France was initiating the movement, and dreaded that it would end not in a free

Italy, but in the substitution of French for Austrian rule. Their full sympathy was gained only when the French arms were withdrawn. It steadily grew as province after province evinced the moderation, the firmness, the political self-restraint which was needful to counteract the policy of the Villafranca treaty. The noble self-forgetfulness of Tuscany, the steady pertinacity of Parma, Modena, and the Romagna filled the English people with trust and admiration. From the day when France claimed her reward in the despoiled provinces of Savoy and Nice, England learned to regard her part in the revolution not merely with suspicion, but with profound jealousy and dislike. At the same time the adventurous mission of Garibaldi deepened our political sympathy with Italy into one of unusual vigour. When his handful of troops drove before them the well-disciplined armies of Naples, we ascertained with absolute certainly that the South of Italy was not less unanimous in its eagerness to be rid of its native tyrants than the North, of Austrian dictation. From that time up to the entry of Victor Emanuel, in whose name all the marvels had been done, into the Roman and Neapolitan States, England has given her heart more and more to this great cause, and averted it with more and more decisive disapprobation from the ruler who fought, ostensibly for ideas, and really, for slices of Italian territory. And nothing would exasperate England more than to see the Italian movement defeated by the artificial intervention of a foreign ruler. No Government in England could long stand, that should tamely permit such an intervention, such a departure from that great policy for Italy which, when announced by England, received the adhesion of the Emperor himself in his letter to Count Persigny. There is but one solution to the Italian question which Italy will accept,—and unnecessary delays in bringing about that solution is a European evil. It is no longer a matter at the discretion of France whether or not she will divert the stream of events which is rapidly tending to that solution. If she attempts to do so, she cannot but find that there are points on which the popular policy of England is not only clear, but resolved. We trust and hope that no such lamentable difference of policy is really to be dreaded.

THE PRACTICAL DIFFICULTY OF FRAMING A TARIFF LIKE THE FRENCH, AND THE INEXPEDIENCY OF ATTEMPTING TO DO SO.

We can hardly imagine a more laborious and in some respects a more thankless task than the adjustment of the new French Tariff. The number of details which it involves, the number of interests to be considered, the number of persons to be seen respecting it, entail of necessity many a long hour of wearying and harassing labour. And this is hardly the worst. The attempt is a choice of difficulties. Whichever course is adopted, by far the greater part of the necessary decisions will be found fault with—will be criticised by critics who probably only understand one-half of the case—who probably comprehend the defects of the plan to which they are objecting, but are almost certain to be quite ignorant of the defects attaching to all other plans.

The object of the French Tariff, as far as it respects England, is to raise a revenue, partly for the sake of revenue, and partly also for the sake of protection from a very miscellaneous list of articles,—some of them, as coal and iron, being raw materials, but most of them being manufactured articles in some stage or other, either raw materials partially wrought, or finished goods suitable to the consumer. Now there are obvious difficulties in raising such a revenue. What is the duty to be? It must be a fixed sum *per something*, but what is that something to be in a crowd of miscellaneous articles? A duty on a raw material is usually, in comparison, a clear fiscal expedient: we know on what it is to be levied; but manufactures as various as the uses for which they were made, are as innumerable, as changing as the wants of man, and by the unalterable nature of things there is an inevitable difficulty in fixing the mode in which a fixed and practicable assessment is to be made of such uncertain, varying, and complicated materials.

We shall see this difficulty more distinctly by looking at the only two plans which have ever been proposed for meeting it. One of these is the system of *ad valorem* duties,—the system, that is, of levying a given per centage on the value of each article, no matter what it is. This plan has obviously one great advantage when a duty is levied for the sake of protection. It equalises to some extent the amount of that protection in different cases, and with some appearance of fairness. A uniform duty on the price of a dear article and the price of a cheap one is a large protection to the producer of the cheap article, and a comparatively slight protection to the producer of the dear one. But 10 per cent. on the price of the dear article and 10 per cent. on the price of the cheap one gives probably, and in the run of cases, the same amount of protection to the producer of each. But, unfortunately, the value of many things is a very disputable fact. It can be determined in two ways only, by the declaration of the importers, and by the valuation of what are called experts—that is, of persons supposed to be sufficiently conversant with the article to be valued. But both of these are liable to objection. The valuation of the merchant is liable to the great objection that he is interested in the matter, and that you cannot in consequence give perfect and absolute credence to what he tells you. The valuation of "experts" is liable to the somewhat obvious objection that the experts may be wrong. Value is a matter of opinion, and, as we observed last week, estimating it, or attempting to estimate it within narrow limits by any speculative hypothesis—and such is the valuation of experts—must inevitably lead to error, disappointment, and injustice. In a miscellaneous mass of articles like those of the manufactured steel and iron trade, there is an extreme difficulty in fixing the value of them with even fair accuracy; in many trades some articles must be taken to pieces before their value can be correctly ascertained.

On the other hand, an opposite difficulty occurs in the second of the two plans proposed for such a tariff as the French—the plan of specific duties. We meet here the immediate, obvious, and very pressing inquiry—What is a species? The miscellaneous character of manufactured goods is the difficulty of the problem. How are they to be divided into classes? The various Chambers of Commerce which have sent deputations to Paris have valued and weighed, and taken note of an extraordinary number of articles—a number so great that it would seem incredible if it could be ascertained. On each of these the question has arisen—Is it to be a class by itself, or is it to be connected for the purposes of revenue with some other class? And those who are best aware of the complexity of English manufactures will estimate most highly the extreme difficulty of making a classified enumeration of them; and a slight acquaintance with the most ordinary descriptions of goods will be enough to assure us that the difficulty must be very great.

These general considerations show us the difficulties—the perplexing and wearying difficulties—with which Mr Cobden and his fellow labourers have had to contend. Few tasks can have entailed more labour, and few can have had less to sweeten them. They have been endeavouring to do satisfactorily that which they well know cannot be done satisfactorily. A Customs duty on miscellaneous articles of manufacture can never be a desirable source of revenue; it requires too much teasing care, too much minute specification; it entails too large an expense, and opens too many opportunities for fraud and for evasion. It requires the choice between two methods of levying it, both of which we have shown to be materially objectionable—to have great inherent and necessary defects. No one knows this better than Mr Cobden and his associates. But they have been stimulated to undertake this heavy task by the hope that the present French Tariff is only a first step to a better Tariff—that the course now taken may be a prelude to better courses hereafter—that the long list of duties and duty-paying articles may one day be much shortened—that France may hereafter have a rational, simple, intelligible Tariff—such as, after the care and effort of more than thirty years, England is now at length privileged to possess.

LET THERE BE NO CONGRESS.

The independence and completion of the United Kingdom of Italy is threatened with corresponding dangers from two opposite quarters—the Diplomatic and the Revolutionary. Rash and unwarranted action on either side may compromise

the happy result which now seems almost within reach, may prevent the formation of one entire and rounded State in the Peninsula, and may keep the "Italian Question" still open, so as to postpone indefinitely the peace of Europe. Without the inclusion of Venetia and of Rome, Italy we know can never be tranquil, because she can never feel herself either complete or safe; yet this indispensable inclusion is at the present moment exposed to extreme hazard by the diplomatic interference which is menaced on the one side, and the patriotic impatience which is manifested on the other. We deprecate both alike with the greatest earnestness.

There are renewed rumours of a projected Congress, to determine the still unsettled points of the Italian question,—rumours which, notwithstanding the reported disinclination of Austria, have begun to assume some degree of consistence. Those unsettled points are, of course, the relation which shall in future be borne by Rome and Venice to the new Italian Kingdom. Now it is all but certain that a Congress will decide both these points wrong, if it is allowed to meet and discuss them at all. We may be sure that diplomacy will never so far depart from established usage—will never so far subordinate small habits to great principles, or old formalities to new objects—as to urge Austria either to surrender or to sell Venice. If a Congress intervenes at all at present, it will intervene to pronounce that Venetia is and shall remain Austrian. Austria will insist upon this; Prussia, we know, will back her; Russia cannot avoid taking the same side; and, judging from the despatch of Lord John Russell to Sir James Hudson, there is too great reason to fear that England will not—to say the least—actively throw her weight into the opposing scale. It would be a wholly new thing for the assembled Potentates of Europe to urge or even recommend one of their number to resign a Province on the ground that its inhabitants were irrevocably hostile to his rule, and desired to be united to another State. If a Congress meets, therefore, to discuss this question, it will end in confirming and guaranteeing to Austria the possession of Venice; and the grand sore of Italy will be more rooted and more maddening than ever.

The case of Rome is somewhat different. It will be difficult if not impossible to dispose of the Pope and to provide for his future, without the conference and joint action of at least the Catholic Powers. If he is to remain at Rome, the terms on which he remains there must be matter for arrangement. If he is not to remain there, it will have to be decided where he shall henceforth reside, and how he shall henceforth be maintained. But any action of a Congress or a Conference on this matter is likely to be far wiser and more healing a year or two hence than now. When all the rest of Italy is united and consolidated; when the new Kingdom is thoroughly fused, its Government organised, its army formed, and its position established and recognised, a small independent estate in the very heart of it will hold a very different relation to the whole from that it holds now as a diminished Principality in the midst of several others all more or less in a confused, precarious, and provisional condition. As to Venetia, then, we say Europe ought not to interfere at all:—as to Rome, Europe should not interfere *yet*.

But if the premature action of Congress is to be dreaded and deprecated, the premature action of the Piedmontese Government or of the unorganised Italian patriots would be an almost more formidable, as it is certainly a more immediate danger. If Victor Emanuel should be weak enough or mad enough to let himself be seduced to attack Venetia or Rome, at least till he has done all his other work, he will almost deserve his fate. Is it possible he should be blinded by his success hitherto to the far greater perils of either enterprise? Is it not certain that an attack upon the Austrian possessions in Italy by Sardinia *alone* must necessarily end in discomfiture? Is it at all certain that France would aid in such an adventure? Is it not almost certain that, if France *did*, Germany would mingle in the strife; and that the position of England in such a case, with her hampering engagements, her distracting sympathies, and her *warranted mistrusts*, would become painful and embarrassing in the extreme;—and that if France did *not*, the defeat of the enterprise (which we do not hesitate to take for granted) would entail in all likelihood the re-enslavement of Sicily, Naples, and Romagna, if not still more fatal consequences? Is it not obvious that in such a catastrophe, *so invited*, it would be difficult for England to interpose even to save Sardinia herself?

We are clear that the advice which every sober and sincere partisan of Italian independence and Piedmontese aggrandisement—every one who truly desires the consummation of the grand dream of a powerful and united Italian Kingdom—would urge with all his might upon Victor Emanuel and upon every inhabitant of every Province of the Peninsula, would be identical in tone and substance. The course to be pursued and the course to be abstained from are equally clear. There is no room for doubt, and no time for hesitation. Ultimate success is certain in the one case; disgraceful failure is certain in the other. Let not a moment be lost in completing the work of Neapolitan emancipation: a vigorous attack by land,—and sea if it may be,—will hurl Francis II. from his tottering throne, and drive him from his forfeited country. Then let Victor Emanuel put in operation every resource of statesmanship, of prudence, of peremptory firmness, of administrative skill, to consolidate the Kingdom he has won; to develop its vast resources, to restore its municipal freedom, to establish everywhere a Government at once just, resolute, liberal, and strict. Let him create among his new subjects an ample army, trained and drilled and *moralised* till it be worthy to fight in the same ranks with his old one. Let him repress firmly all those impatient and inconsiderate patriots who would drive him into extreme courses or into premature action,—who have neither the patience, the judgment, nor the disinterested virtue needed for so hazardous a crisis. *Without pretending for a moment that Italy can be considered complete without Venice or without Rome*, let him distinctly avow that he has no idea of attempting to seize either, partly because he knows it would be hopeless, principally also because he knows it will be needless. Nothing is more sure than that when all the rest of Italy is constituted into one loyal, unanimous, well-governed Kingdom, with an army befitting so populous a State and a revenue conformable to so rich a soil, Venice and Rome must ultimately escheat to it as a natural and inevitable issue. Nothing is more sure than that, *till* the Italian Monarchy is thus constituted, Venice and Rome cannot be conquered by its incomplete and unorganised powers. Force can do nothing here: negotiation, patience, and money can do everything. Give time for the perfectly natural and recklessly goaded irritation of Austria to subside; abstain from insult and from menace; allow calm policy and cold calculation to operate that arithmetical conviction which is more powerful than any other when passion is no longer at work; wait till 24,000,000 of people have some claim to ask that one million of their brethren and the land they live in shall be permitted to join their federation;—and then politely but pertinaciously ask the mediation of Europe to persuade Austria to *sell* what it costs her so ruinous a sum to keep;—to turn a source of weakness and expense into a source of revenue and strength. We are persuaded that sooner or later—all the sooner for irritating menaces being withdrawn—Austria will see the wisdom as well as the humanity of listening to such proposals. As military master of a Province in a state of chronic insurrection, Austria's position in Europe must always be a weak and complicated position, because a false one. Once liberated from it, she would become the natural ally both of Italy and of England.

The Roman difficulty remains. The Roman difficulty cannot be solved by violence, but will solve itself by time. Already that solution has begun. The Pope cannot remain an insignificant temporal Sovereign, imbedded in the territory of a vast and powerful monarchy. Yet to that position of insignificance he is actually now reduced. He retains nothing of his old estates except the Episcopal City from which he takes his name, and a slip of barren territory lying between that City and the sea. Half his adherents throughout Europe—and far the most earnest and religious half—have arrived at the conviction that he would be a far more efficient as well as a far more respected Head of the Catholic Church, were he to become a purely spiritual Potentate;—and there can be no doubt that they are quite right in the conviction. That he *shall* be "desecularised" may be considered as already a settled point, and almost a *fait accompli*:—the manner and the moment of his "desecularisation" alone remain to be determined. We admit the difficulties of the process;—but they are difficulties only of detail.

THE AIMS AND MEANS OF THE REPUBLICAN PARTY IN THE UNITED STATES.

The election of a Republican Governor in Pennsylvania by a majority larger even than was hoped, leaves no doubt that that great State, which four years ago gave victory to Mr Buchanan and the Slavery policy, will this year retrace its steps and decide for Mr Abram Lincoln and his mild type of the Anti-Slavery policy. New York is yet undecided. The party which call themselves Unionists at all costs,—consisting of a fusion between the old Whigs and the less vehement Slavery men,—profess the utmost confidence of success; and should they succeed in New York, it is certainly possible that some compromise party of this kind may gain sufficient adherents to prevent the triumph of the Republican candidate for the Presidency by the requisite majority, and thus to leave the choice in the hands of the Senate.

But, be that as it may, it seems now little short of certain that the Republican party are at last gaining rapidly on their opponents; that they have taken distinct issue with them on the principle of extending or limiting the area of Slavery,—and that this rapid recent growth, therefore, must be interpreted as a genuine expression of a growing popular conviction in the North that the Southern policy on this question is aggressive, dangerous, and iniquitous. This is a most encouraging fact. The apathy of the Northern States under the constant aggressions of the Slaveholders' policy and the gross insults of the Southern party, has been a subject of grief and amazement to English politicians for many years back. The indifference which permitted the election of Mr Buchanan by an immense majority at a moment when a monstrous civil war of Slaveholding origin was raging in Kansas, and when Mr Sumner was still suffering severely from the brutal violence of a Carolina Slaveholder simply for speaking freely in the Senate on the Anti-Slavery side, was scarcely intelligible to any English Liberal. We regarded it as a sign, not merely of political corruption, but of positive degradation,—of the extinction of the spirit of true freedom in the United States. We now hope that we were too hasty,—that though these huge masses of electors are but slowly penetrated by any great moral conviction, we may yet see the nobler ideas at the root of all democratic institutions struggling with those vulgarer and grosser forms of democratic passion with which they are almost uniformly joined. We may hope to see the masses of the North give some practical illustration of their theoretic value for human liberty,—instead of prostituting it to denote the absolute right of a strong race to oppress all feebler races, and the right of crowds to tyrannise over all smaller groups of men. This is, of course, the characteristic sin and peril of democratic institutions; but till recently we had seen little or no indication that the conscience of the American people was in any way alive to it. Now for the first time we have some tangible grounds for saying that better and more equitable ideas of democratic equality are gaining way in the United States.

But when we come to ask ourselves what the practical policy of the Republican party,—if they should now, or whenever they shall, gain a Presidential election,—will be,—the answer is by no means easy. Their aim and effort no doubt is simple,—to localise slavery, to prevent its growth, to limit its evils, to promote its extinction. But the difficulty lies less in the end to be attained than in the means to be adopted. And the main point and climax of the difficulty lies in this, that the Federal Constitution, honestly construed, offers no sufficient instruments for the repression or even diminution of local State-evils. The Federal Government is in fact scarcely a *Government*, in any proper sense, at all. It is the organ of an alliance between wholly heterogeneous States,—and hence is the nominee now of one element, now of the other, but never *really* of both. It is very much what the Federal Government of Italy would have been if the Villafranca scheme had ever been worked out. There would have been Sardinia doing all in her power to defend the constitutional principle of government and to enlarge the number of federated Italian States recognising that principle. There would have been Austrian Venetia, Naples, and Papal Rome doing all in their power to defend the arbitrary and inquisitorial principle of government, and endeavouring to enlarge the number of federated Italian States conforming to that principle. But neither party would have had, federally, any power to undermine or change the Constitution of the other States. All that could have been possible would be for the party in the ascendant for the time to prevent the encroachments of its opponents and bid high for the adherence of the neutrals. If Piedmont had been at the head of the confederation, she could not have put down the inquisition in Rome, or abolished the unconstitutional imprisonments and tortures of Naples. If Rome had been in the ascendant, she could not have gagged the press of Piedmont, or silenced its Assembly.

Very similar difficulties lie in the way of the Republican party in the United States in any attempt to devise a *policy*. They may, while they remain in power, limit the development of Slavery, but they have no constitutional weapon with which to reach it within the Slave States, and the moment they lose power again, it will again advance with rapid strides, as it has done under Mr Buchanan. It may be possible to repeal the Fugitive Slave Law, for that is a measure determining the mutual relations of the States. It may be possible to nullify the decision of the Supreme Court in the Dred Scott case, though this will be difficult. It will be possible, so long as the Republicans remain in power, to prevent the annexation of any new Slave State or Territory to the Union, and thus to isolate the evil influence. But this is all. They cannot legislate for the Slave States themselves. They cannot pass measures first reducing Slavery to the better kinds of serfdom, and then gradually extinguishing it altogether. They cannot prevent the breaking up of Slave-families,—the dispersing of wife and husband and children in different directions. In fact, they can in no way initiate a statesman like policy for the gradual extinction of this tremendous evil. *And all that they can legitimately do by the Federal Constitution depends on the ability of the Republican party to retain its supremacy for an unlimited period when it is once gained.* For what can be done is essentially of the nature of a *blockade*, and depends on sealing Slavery hermetically up within given limits. Let the blockade ever be broken by the return of the Southern party to power, and all the good effected is undone at once.

Mr Seward, the leader of the Republicans, evidently feels this difficulty very keenly. He and his followers profess complete devotion to the Federal Constitution, and hence unlimited respect for the local autonomy of the Southern States. And yet they feel that the gradual extinction of Slavery is the one vital point for the American Republic. The only solution held out by Mr Seward in his recent gigantic orations at Detroit, and St Paul's Minnesota, and Dubuque in Iowa, is so rapid a multiplication of Free States as to put the Southern party into a permanent and hopeless minority,—so that whatever be the politics of the Executive of the American Union, they shall at least always be of an Anti-Slavery cast. He hopes that with new Anti-Slavery States in the West and North-West,—Kansas, Nebraska, Idaho, Chippewa, Jefferson, Nevada, Washington, and Arizona,—the power of the Republican party will become so absolutely secure that no recovery of power by a Pro-Slavery party, however intermittent, need be dreaded. Nay, Mr Seward is counting on British and Russian America eventually to swell his list, though we suppose he does not look to that during the present generation. But, then, unfortunately, on the other hand, there are we fear in the South almost as many embryo Slave States as there are embryo Free States in the North-West. It must be a race between the two parties after all. Mr Seward himself looks forward to the absorption of Mexico. Self-restraint in this direction seems to be no part of his policy. And should Mexico be absorbed under the auspices of any party, the first subsequent triumph of the South would convert it into a perfect mine of Slave States. On the whole, while heartily rejoicing in the signs of new life in the Republican party, we are inclined to think that they can never succeed in eradicating the taint from the Southern States without winning for the Federal Government a far greater power than that which it possesses by the present Constitution; and that, unless disunion be contemplated, the efforts of the Republican party will have to be made in this direction.

THE BOARD OF TRADE RETURNS FOR SEPTEMBER.

The Board of Trade Returns for September show a very thriving state of this country's trade. The declared value of the exports for the nine months ended 30th of September is greater by 3,687,035*l* than last year, and by 5,988,754*l* than in the first nine months of what was then regarded as the inflated year 1857. We go back to 1857 as a fairer year for comparison than the depressed year 1858. The returns are :—

September.

1857.	1858.	1859.	1860.
£	£	£	£
11,068,874	10,713,765	11,631,426	13,646,451

Nine Months Ending 30th September.

1857.	1858.	1859.	1860.
£	£	£	£
95,735,592	86,310,329	98,037,311	101,724,346

The increase, therefore, is more than 6 per cent. in three years,—certainly not too rapid for safety, but still satisfactory. It is the more satisfactory, because, when we come to examine the cause of the increase, it appears to arise rather in the increased demand of our widely-distributed smaller customers than in any single market. This was not the case a year ago. Then India was taking an enormous mass of our goods, but our exportations to other places were rather on the decline as compared with the year 1857. Now, the Indian trade is less prosperous than last year, but the general demand amongst our smaller customers is increasing in a very marked way. Thus, for example, the demand of Turkey for cotton goods, of Holland for both woollens and cottons, is considerably on the increase; the trade with British America is recovering; and, what is by far the best test of a *generally* prosperous trade, the exports to "other countries,"—*i. e.* to customers so small that the individual exportations to them are not worth distinct enumeration,—are very largely increased. To give some impression of the generality of this increase, let us take the cotton, woollen, linen, silk, and hardware trades. We find as follows :—

Exports to "Other Countries" taking Values too small for an Individualised Enumeration.—Nine Months ended September 30.

	1858.	1859.	1860.
	£	£	£
Cottons	1,817,065	1,794,214	2,179,200
Cotton yarns	548,986	616,883	745,322
Hardware and cutlery	711,800	694,051	810,049
Linen cloth	792,098	821,251	934,876
Linen yarn	348,409	368,001	375,408
Silk manufacture—Stuffs	241,055	253,450	363,319
Silk manufacture—Other articles of silk only	107,342	99,453	87,342
Silk mixed with other materials	298,607	334,972	445,980
Silk—Thrown	39,805	60,532	86,864
Silk—Twist and yarn	39,068	63,651	127,093
Woollens—Cloths	457,657	501,897	593,142
Mixed stuffs, flannels, &c.	682,290	710,655	928,216
Entered at value	289,497	396,723	376,451
Worsted stuffs	637,577	660,292	616,705
Stockings	60,047	119,311	129,232
Woollen and worsted yarn	60,976	77,086	90,253
	7,132,279	7,572,431	8,889,622

This table shows an increase of about 25 per cent. since 1858 in the demand of the smallest and most insignificant markets for English cottons, woollens, linens, silks, and hardwares,—a rate of increase quite equal to the average total increase of these important export trades. Hence we see that the general and distributed demand for these goods in petty places which have little wealth or means, has increased proportionately quite as rapidly as the demand for them among our chief and most important customers. A clearer proof that the demand is permanent, and not spasmodic or accidental, can scarcely be imagined.

Of the large increase of three millions in the value of the export trade of three quarters of a year, two-thirds or two millions sterling is due to our trade in manufactured cotton goods, in which the increase is due not so much to any one market, as to the fresh demand in a number of second-rate markets, such as Turkey, Holland, Brazil, Peru, Chili, Buenos Ayres, Java, &c. Another half million sterling of increase is due to the trade in cotton yarn, and here, too, countries like Holland, Prussia, Turkey, are the origin of the increase. So in woollen yarns, the considerably increased demand is divided amongst Hanse Towns, Holland, Belgium, France, &c. The export trade in metals (iron, lead, &c.), which had been much depressed, is at last recovering,—with the exception of that in railway iron, which is below that of both the preceding years.

With regard to imports, corn and flour are at last beginning to arrive in some quantities, and to equal or exceed the amounts of the year before last. The cotton received is rather less in amount than in the same month in previous years. Wool is still received in large quantities. There is a reaction as to French and other wines, very little having been retained for home consumption, as also with regard to spirits. Sugar and tea are received in full quantities.

THE *AD VALOREM* DUTIES IN THE FRENCH TARIFF.

We have received the following letter on the subject of our last week's article on this topic :—

TO THE EDITOR OF THE ECONOMIST.

Sir,—Permit me to offer a few words of explanation upon the subject of the *ad valorem* duties to be levied under the treaty with France.

The plan adopted (as I understood it when in Paris) is precisely that in practice in the United States, with some modifications in the details which are favourable to the importer.

In both countries 10 per cent. undervaluation by the importing merchant will subject him to a fine; but the amount of the penalty in France will not exceed one-half that in America.

For instance, in the case of cutlery, which is to pay 20 per cent. duty, the fine to which it is subject at the French Custom House for undervaluation to the extent of 10 per cent. or upwards is 50 per cent. *additional duty*, which, with a duty of 20 *per cent.*, is equal to 10 per cent. on the value of the goods. In the United States, the penalty is 20 *per cent. on the value of the merchandise.* In the case of carriages and leather manufactures, paying 10 per cent. duty, the fine will be only 5 per cent.

The terms respecting the arbitration are equally favourable under the treaty. In America, the Custom House authorities retain the power of choosing the arbitrators. In France, the importer is to have equal privileges in this respect. As respects the mode in which the arbitrators are to proceed to verify the value of the goods, it will be identically the same in both countries. They will have to ascertain the truth of the declaration of the importer. This can of course only be done by taking for the basis of valuation the selling price in England, with the addition of freight and charges to the port of entry. This can surely be done with less difficulty at Havre than at Boston or New York.

In the French treaty the right of pre-emption in case the goods are declared by arbitrators to be undervalued 5 per cent. is retained. I think your fears are quite groundless respecting the use likely to be made of this right by the Customs authorities. *Assuming the declaration of value to be honestly made*, it would not be profitable for parties at Boulogne or Havre, whether Custom House officers or others, to take the goods with all the charges, and with 5 per cent. added for the profit of the importer. Where could they find a market for goods obtained on such terms in competition with importers who would have paid only 1 per cent. commission to the purchasing agent in England?

To quote our own practice for an argument can have have no weight, because we have found our system to work so badly as to compel us to abandon *ad valorem* duties. The only country in which this mode of levying duties has been adopted as a principle and with the prospect of being continued is the United States, where penalties for undervaluation have been introduced into the system. If British manufacturers wish to see their goods admitted into France at *ad valorem* instead of specific rates of duty, they must consent to the French Government taking a similar precaution against fraud. The imports into France, as into Germany, Belgium, or Spain, will, as a rule, be made on account of Frenchmen or foreigners, and only in exceptional cases by Englishmen. But surely to the extent to which our merchants are engaged in this trade, they will be benefited by an arrangement which will protect them against the competition of dishonest traders.

We need only add a very brief comment. Our correspondent forgets that a much larger profit than 5 per cent. will usually be expected and made on the importations. If the profit of importing into France were, say, 15 per cent., the Custom House authorities might, after paying the 5 per cent., still sell at a profit of 10 per cent.: nor could the importers absolutely prevent this except by selling at a profit below 5 per cent., so that the rule of pre-emption referred to, practically limits the profit of importing all articles charged with *ad valorem* duties to a maximum profit of 5 per cent.

Again, if the *visé* invoice value is not to be sufficient evidence as to the selling price in England,—if difference of opinion is to be admitted and investigated as to the selling price in England,—then a margin of 10 per cent. is not enough. It is a very different case from an estimate as to the *selling value in France*, which might be justly determined by an offer to buy at the value declared on the spot. No

such offer could be a fair test of sincerity in the case of a declaration of *cost price* only, on which the importer hopes to make a considerable profit. And the question as to the cost price in England will not be an easy one to determine in a French port. We may add that the English system of *ad valorem* duties worked very well recently—much more easily than the system now announced is likely to work.

NEAPOLITAN TARIFF.

(From Tuesday's GAZETTE.)

Board of Trade, Whitehall, Oct. 29.

THE Right Hon. the Lords of the Committee of Privy Council for Trade have received, through the Secretary of State for Foreign Affairs, a copy of a despatch from Her Majesty's Minister at Naples, enclosing a copy of a decree, published in the *Official Journal* of that city, assimilating the Neapolitan Tariff to the Tariff in force in the Sardinian States, with the exceptions specified in the subjoined table, and with the addition, as regards all imports and exports, of 10 per cent. to the amount of duty:—

IMPORTS.	Rates of Duty. d	g	English Weights.		English Money. £	s	d
Class II.—Nitre (among chymical produce, not specified)	Prohibited		...	...	Prohibited		
Class VIII.—Yarn, of hemp or flax, raw or bleached, per cant	8	0	... 196¼ lbs	...	1	6	8
Ditto, dyed, per cant	10	0	... —	...	1	13	4
Class IX.—Cotton wool, per cant	4	0	... —	...	0	13	4
Ditto, wadding, per cant	5	0	... —	...	0	16	8
Ditto, yarn, raw, per cant	6	0	... —	...	1	0	0
Ditto, twist, per cant	9	0	... —	...	1	10	0
Ditto, spun, bleached, dyed, per cant	10	0	... —	...	1	13	4
Woven goods, cotton, and wool, 4 grane per rotolo are to be added to the duties specified in the general tariff.							
Class X.—Yarn, woollen or of hair, any sort, per cant	12	0	... —	...	2	0	0
Yarn, dyed, per cant	15	0	... —	...	2	10	0
Woven goods, of wool or hair, mixed or not with cotton or flax, 4 grane per rotolo to be added to the duties specified in the tariff.							
Class XI.—Woven goods of silk, in pieces, scarfs, handkerchiefs, or shawls, or mixed with gold or silver, real or not, per rotolo	3	0	... 31 3-7 oz	...	0	10	0
Floss silk or mixed with silk, per rotolo	2	40	... —	...	0	8	0
Floss, with other materials not silk, per rotolo	2	0	... —	...	0	6	8
Class XIV.—Paper for printing, pasteboard, blotting paper, or packing paper, per cant	4	0	... 196¼ lbs	...	0	13	4
Class XIX.—Glass, panes, blown glass, coloured or not, per cant	6	0	... —	...	1	0	0
Class XX.—Tobacco	Prohibited		... —	...	Prohibited		
EXPORTS.							
Class I.—Olive oil, per cant	2	20	... —	...	0	7	4
Class XV.—Rags of vegetable substances, per cant	8	0	... —	...	1	6	8

Agriculture.

WILL ACTION FOLLOW TALK?

A LANDLORD WHO HAS SEEN THE WORLD.

"WHERE there is much smoke there must be some fire," and surely all the talk, and not irrational talk, we have lately heard from landowners at agricultural meetings on the subject of agricultural improvement, must by and by result in some practical action. But unfortunately the landlord is like a shy horse which baulks its fences. He goes on sharply and vigorously enough till he comes to the main point of difficulty. What the stiff timber fence, or the wide brook, is to the shifty hunter, the long lease, or the surrender of game preserves, or an outlay in permanent improvements, is to the English landlord. That he cannot make up his mind to face; and he shuffles, and shies, and goes round about and about the matter in utter perplexity. If we mistake not, the present season will try the yearly tenancy system pretty sharply. And men of mark amongst the English landowners are beginning to see the true road to agricultural improvement; an improvement, let it be noted, by which they will themselves greatly benefit.

At the Worcester Agricultural Society, Sir John Pakington, in returning thanks for the toast of his health, followed Mr Disraeli's example, eschewed politics and became intensely agricultural. He was strongly impressed with the idea that "their object at these meetings should be to disseminate agricultural knowledge," and he contributed his own mite by an account of what he had seen and heard during a recent visit to Scotland. He said:—"He would tell them that within the last few days he had travelled through that celebrated farming district between the Forth and the Tweed. He had seen there splendid farms with large fields and small hedges, in which he could count the homesteads because there were few trees to intercept the view, and every homestead had its steam engine chimney. There rents were high because farming was profitable, and farming was profitable because leases were long. Every farm was farmed with a sufficient capital, and the tenant had no hesitation in investing his capital because he had the security of a lease. The result was such that he was almost afraid to mention it to a Worcestershire farmer; but he (Sir John) was told that it was common to pay corn rents there, and that the rent of a farm per acre in that district was the price of two quarters of wheat, and sometimes three. Sometimes a farmer paid 1,000*l*, 2,000*l*, and even 3,000*l* a year rent, and had a handsome profit left for himself afterwards." Doubtless Sir John felt he was treading on delicate ground, for while the game-preserving Squires of Worcestershire would not like his praise of long leases and hints about clearing hedgerows—where game animals do harbour—the tenants might not altogether approve the talk about high Scotch rents. The travelled Squire therefore let both down gently, merely hinting at the possibility of improvements in Worcestershire after—though at a long interval—the fashion of Scotland, saying:—"Now, this was a fine picture of farming, but he must confess that he should be sorry, in the county of Worcester, to see all [why all?] their beautiful elms, their wide-spreading oaks, and their rich apple orchards felled, and to see the country as treeless as he saw the country between the Tweed and the Forth a few days ago, where they saw many chimneys, but looked in vain for a lofty tree. But they might do a great deal in the way of improvement before they arrived at any such desperate alternative as that, and he thought they should endeavour to follow the example which had been set them in Scotland to a certain extent. He knew there were some parts of Worcestershire in which they might see some very good farming, but let them face the truth, and they must admit that that was not the general character of Worcestershire farming. They did not stand high in agriculture in Worcestershire, and their first object should be to communicate knowledge to each other, and so to turn the agricultural associations to real practical objects."

Now, no one can doubt that leases might be granted, fields enlarged, fences straightened, and superfluous timber removed in Worcestershire, without any detriment to the character of the country, and with much benefit to both landlords and tenants. But will the landlords take the initiative by offering leases? Will the tenants, who seem not to be very enterprising, make a strenuous demand for leases, and offer to their landlords equivalent advances by way of rent? Will Sir John Pakington apply his Scotch knowledge to the management of his own estate? Not, it may be safely said, till driven to do so by the force of circumstances; for the improved system would require the sacrifice of many prejudices on the part of the landlords, and more outlay and exertion on the part of the tenants than the torpid system at present in force. We do not see from the report that any tenant-farmer at Worcester took up the theme broached by Sir John Pakington, or improved the occasion; but at the Hereford agricultural meeting Mr Duckham, a farmer, after thanking Mr Clive, a landowner, for promoting the formation of a company for the purpose of providing steam ploughs to be let for hire, pointed to the "essential requirements of the fields being made more open, the crooked hedgerows straightened, and the superfluous timber felled, before they could be enabled to derive the full benefit from its [steam plough] use." Here we find the "beautiful elms and the wide-spreading oaks" forming the obstacles to the use of the steam plough, on which both tenants and landlords seem to reckon in many of their aspirations after agricultural progress. Mr Duckham also "begged to tell them that giving the tenantry a full freedom of action, not shackling them in their endeavours by restrictive agreements, and giving them an equitable tenant-right, would do more for agricultural progression than anything which had hitherto taken place." Substituting an equitable lease for "tenant-right," Mr Duckham's speech was quite to the purpose.

And will not all this talk end in action? Perhaps it depends on the seasons; for if another bad year shall occur, there will be such a cry of distress from yearly tenants as will convince landowners that they must do something.

DRAINAGE OUTFALLS.

DRAINING must inevitably occupy much of the attention of the agriculturist during the coming winter. The last twelve months of almost incessant rain have disclosed wet places on farms believed to have been completely drained, especially where the outfall has not been very good. Undrained land has been nearly useless, and great efforts will be made by farmers to procure the complete drainage of their farms. None of them will now say the land has been overdrained, and landlords will find it necessary to aid their tenants by draining their farms, for the position of the weaker farmers at the present moment is a somewhat precarious one. In many places the want of sufficient outfall proves a great obstacle to effective drainage. Mr Bailey Denton, in a letter on this point—addressed to the *Mark Lane Express*—after referring to the demonstrated superiority of deep over shallow draining, says:—

"I do not make these remarks to provoke discussion on the oft-

disputed point, *the proper depth for under-drainage*, but to draw attention to the data afforded in the present season for determining the nature and extent of a measure so long promised, and daily becoming more and more required, for the improvement of outfalls. The floods that have covered the valleys and silted the grass, and spoiled thousands of acres of meadow hay, have given self-evident proofs of the necessity of remedial measures with respect to the main arteries. By the various unconnected works of under-draining already executed, which form but a very small proportion of what will some day represent the drainage of this country, vent has been given to pent up waters previously dispersed by driblets and evaporation. They have converted bogs and beds of free soil, in which water stagnated, into filters of rapid action, and have compelled tenacious clays to let go their hold of water, which had hitherto been claimed solely by the atmosphere. These waters of drainage have been got rid of regardless of the fact that water set free from above commits injury below, unless it be securely guided to its ultimate discharge; and thus it is that under-drainage, at certain seasons of the year, has augmented the floods in particular valleys, and will continue to augment them still more, as the practice (which may be said to be only commenced) extends."

The difficulty of making outfalls is not often occasioned by any engineering difficulties, but from "the rights of interposing private property, and the weakness of the law with respect to existing public ditches." Mr Denton considers that there ought to be some general law under which these obstacles to drainage could be got rid of without the enormous expense of a special Act of Parliament. This is a subject which well deserves the attention of all owners and occupiers of land in districts which require drainage.

COMMERCIAL LITERATURE.

STATISTICAL NOTES OF THE PROGRESS OF VICTORIA FROM THE FOUNDATION OF THE COLONY (1835-1860). By WILLIAM HENRY ARCHER, Registrar-General of Victoria. John Ferris, Government Printer, Melbourne.

CONCEIVE a colony only twenty-five years of age publishing by authority a volume of statistics. Verily this is a time of progress, steam, and electricity. Conceive a colony of this age also having a Registrar-General. Why England, if we mistake not, was some 1,840 years old before she possessed such a blessing; but it was only in 1835, owing to the adventurous zeal of Batman and Fawkner, and Major Mitchell in 1836, that the two colonies (Van Diemen's Land and New South Wales) from which Victoria was first peopled "learned with a joyous surprise of the beauty and fertility of a new territory opened up to them for settlement and commerce in the district of Port Philip." The younger of these, Van Diemen's Land, now called Tasmania, was founded in 1803, and contained in 1836 43,895 inhabitants. On the 31st March, 1857, its population had increased to 81,492. In like manner, New South Wales, older than Tasmania by fifteen years (being founded in 1788), was found to possess in the year 1826 77,096 inhabitants, and on the 31st March 1857, not less than 295,000; but Victoria during the same interval of less than twenty-one years had distanced them both. The number of 224 souls! existing there in 1836 had by the 31st March, 1857, multiplied more than eighteen hundred-fold, there being at that date 410,766 persons, or 115,766 more than the number estimated to be living on the same day in New South Wales, and 329,274 in excess on the same date of the number of people resident in Tasmania. Such progress as this we believe to be unparalleled in the history of the world.

What can any history inform us more of the colony than this very ample collection of facts and figures, showing the progress of the colony in inhabitants, its agricultural, mineral, and commercial progress—its table No. 1 showing that its population consisted of 142 males and 35 females, and in 1857 had increased to 264,334 males and 146,432 females, which had further increased in December, 1858, to 323,596 males and 180,943 females,—in round numbers from 177 souls to 504,539.

Our space will not allow us to follow these interesting tables so ably compiled by Mr Archer, but we cannot refrain from quoting a few of the facts they enumerate, for instance in the table No. 7, containing the summary of live stock :—

Date.	Sheep.	Cattle.	Horses.
May 25, 1836.....	26,090	100	57
March 31, 1859.....	5,578,413	699,330	68,323

And then again in table 8, showing the quantity and value of wool and tallow, and the value of skins, exported from 1837 to 1859 inclusive :—

	Wool.		Tallow.		Hides and Skins.
	Quantity.	Value.	Quantity.	Value.	Value.
	lbs.	£	lbs.	£	£
1837	175,081 ...	11,639 ...	2,240 ...	28 ...	22
1859	21,660,295 ...	1,756,959 ...	548,352 ...	10,354 ...	172,446

It should be remarked, however, that so far as tallow is concerned, the quantity exported in 1850 amounted to 10,056,256 lbs, value 132,863*l*, which only tends to confirm, what we otherwise know, that the sheep are now consumed instead of being melted down for tallow.

From the year 1851 the influence of the gold yield on the purchase of land becomes very apparent, for in the three years ending 31st December, 1853, there were alienated more than twice the number of acres sold throughout the whole of the previous 14 years. Tables 30 and 31 show that from 1st January, 185', to 31st December, 1853, there were disposed of 671,092 acres for the sum of 2,341,978*l*, being at the rate of nearly 3*l* 10s per acre.

The effect of the discovery of gold on Melbourne land prices may be thus illustrated. A piece of land having 22 feet 5 inches frontage, with a depth of only 26 feet 5 inches, was sold in 1853 for 6,000*l*, being at the rate of 441,000*l* per acre.

It would appear that the total amount realised by land sales amounts to 7,625,320*l*, at the average of 2*l* 10s per acre, and that in 1859 the number of bushels of wheat available for each individual amounted to 7.40, estimating the population at 475,226.

During 25 years the squatters have laden home-bound ships with wool, tallow, hides, and skins, to the extent in declared value of upwards of 18,170,729*l*; but in little more than 8 years (1851 to 1859) the gold mines of Victoria have produced at the very least upwards of 87,000,000*l* worth of gold.

We cannot do better than wind up our critique of these marvellous statistics in Mr Archer's own words, prefacing them with the expression of our satisfaction with the manner in which he has put them together, and recommending them to the study of every one who desires to become acquainted with the rise and progress of a colony destined at some future day to become an empire. "A goodly-sized volume of judicious comments might be written on the innumerable details of instructive interest these tables contain; showing as they do the genius and growth of a young British people within a period scarcely exceeding in duration the time that it takes in the course of nature for a new-born child to become a man."

GENERAL LITERATURE.

THE SPANISH CAMPAIGN IN MOROCCO. By FREDERICK HARDMAN, Special Correspondent of the *Times*. William Blackwood and Sons.

THIS series of letters written from the seat of war, and during the occurrence of the events which they describe, gives a lively picture of the brief war in Morocco, from its unpromising commencement amid storms and rain, dirt, discomfort, and disease, upon the heights above Ceuta, to its prosperous ending under the walls of Tetuan.

The writer's style is good, clear, graphic, and condensed; his views are sensible, and as impartial as could well be looked for from one who was himself a sharer in all the excitements, hardships, and triumphs of the campaign.

In itself the Spanish war with Morocco has little importance or interest; but as a sign of reviving activity in the national life of a country once foremost among the nations of Europe, but now for some time past sunk into apparent apathy and decay amidst internal dissensions, it assumes a certain degree of importance; while a tinge of romance still lingers round the names of Spaniard and Moor. Spain indeed may be said to have made war "for an idea." The remembrance of her ancient victories, and the desire of winning back some of the renown she once reaped from battle with the Moors—of proving that the patriotism and valour that made her a nation then, is still in her to keep her a nation now—had more to do with the popularity and success of the recent war than any wish for territorial acquisition, or vague desire of rivalling France on the shores of Northern Africa. The immediate cause of the war was but insignificant,—the material results of victory are hardly worth the cost of its attainment,—the pecuniary indemnity, though large, will scarcely do more than cover the cost of a hasty and expensive war,—the narrow territory around the penal settlement of Ceuta, and even the security of that city from Moorish assaults, are dearly bought by the lives of so many Spanish soldiers; but the gain of Spain lies in the aroused sense of national existence, in a common bond of patriotic union, and in an added feeling of self-respect :—for these, if really acquired, she will not have paid too high a price.

We cannot read Mr Hardman's account of the conduct of the Spanish army in Morocco, without acknowledging that the qualities that once made it rank amongst the most formidable in Europe are not altogether extinct. "Under all the disadvantages," says Mr Hardman, "and trying circumstances that have hitherto attended this campaign, commenced in ill-omened haste, in the worst season, and with very insufficient preparation, the good qualities of the Spanish soldier have been conspicuous. He has been invariably orderly, obedient, contented, and even jolly, under circumstances which Mark Tapley himself might have found trying. Satisfied with little, submissive to hardships, he has a fund of *insouciance* and merriment which bears him up where many would grumble and despair. Drunkenness is unknown in the camp, and crime is consequently rare." And again :—"For patient endurance and cheerfulness under hardship of all kinds, the Spanish soldier is not to be surpassed. I cannot go so far as some of his enthusiastic countrymen whom I have heard declare him to be the best in the world; nor do I think such exaggerated lauda-

tion shows much wisdom on the part of those who indulge in it; but that he has many sterling qualties, and is of the stuff of which first-rate soldiers are made, there can, I think, be no doubt whatever upon the mind of any impartial foreigner who has had opportunities of observing his behaviour throughout the very trying campaign now happily brought to a close."

The trying circumstances that thus tested the sterling qualities of the Spanish soldier were more from the opposition of the elements than of their human foe. In fact for a brave and warlike people the Moors fight very badly; and the losses of the campaign, short as it was, were fully as heavy from disease as from Moorish weapons. The Moors showed a happy facility for running away that saved the Spaniards much trouble. Occasionally they would make a determined stand and fight with much valour; but only four times did the running skirmish that was perpetually going on come to a regular conflict. In the last and greatest at Guad-el-Ras which brought the war to a close, the Moors showed a desperate resolution to oppose their enemy's further progress that might, if it had come earlier in the day, have occasioned a different result to the whole war. As it was, the march from Ceuta to Tetuan was made without meeting with any combined resistance. The fall of Tetuan produced offers of peace that were confirmed into sober earnest by the victory of Guad-el-Ras, and five months saw the opening and the termination of the campaign in Morocco.

We will conclude our brief notice of Mr Hardman's pleasant volume (which, both for the information it gives, and for the touches of scenery and amusing gossip of camp life in a strange country, is well worthy of an existence apart from the columns of the *Times* in which it first appeared) with a description of the Commander-in-Chief and Prime Minister of Spain, Marshal O'Donnell:—

> Put on your waterproof and walk through the camp, on this a wet Sunday, on the hills of Ceuta, and you shall hear no complaint, behold no doleful faces, but, on the contrary, see many a blithe, cheerful countenance. Here is a guard just come up, preceded by its regimental band, and going on wet and weary duty. Were they bound for a parade in the Madrid Prado, they could not look less annoyed. They halt just by the tent of the General-in-Chief, outside of which is standing, regardless, and apparently unconscious of the heavy rain, a tall grey-haired man, seemingly about fifty-five years of age, dressed in a waterproof coat and Mackintosh leggings, the only military part of his costume being the "Ros," or Spanish kepi with three bands of gold embroidery around it, indicating the rank of Captain-General, equivalent to Field-Marshal. His head is rather bent, the expression of his countenance is severe; but at the same time not without a certain *bonhomie*. His brow is somewhat furrowed, but less, you would say, by years than by cares and anxieties, the vigils, and fatigues of an active, eventful, and ambitious career. His step is firm, and when, as sometimes happens, it suddenly lengthens almost into a stride, you perceive that he still retains no small share of the vigour and elasticity of youth. This is Leopold O'Donnell, Count of Lucana, the Spainard of Irish descent, who is now by far the first man in his country; who possesses a power confirmed by its duration (rare for a Spanish Premier of late years), and which certainly has the willing support of a greater majority of the nation than any of his predecessors for many years past could reckon upon.

Literary Reminiscences and Gleanings. By Richard Wright Procter, Author of "The Barber's Shop." Thomas Dinham and Co., Manchester; Simpkin, Marshall, and Co., London.

We should hope that this little work will have the share of local popularity to which its local patriotism entitles it. It is pleasant to see such a cordial spirit of appreciation of almost unknown but not undeserving writers, and such a hearty *esprit-de-corps* towards all who have contributed to the literary or artistic fame of his native town and county, as is shown by Mr Procter in these "Literary Reminiscences." Few of the names indeed over which he lingers with pride and admiration are famous beyond the Lancashire border; yet we think he has "indicated enough to justify a Lancastrian's pride in the literature of his county," only premising that this laudable pride shows itself now and then after too exalted a fashion. Overstrained sentiment, and an over flowery style, are the faults of the book; in spite of these, however, this prettily illustrated little volume may well fulfil its writer's modest ambition by proving a not unwelcome addition to the literature of his native town.

Land and Sea Tales. By The Old Sailor, Author of "The Warlock," &c. A New Edition. London: Routledge. 1860.

Melo-dramatic trash of the poorest description.

The French Under Arms. Being Essays on Military Matters in France. By Blanchard Jerrold, Author of "Imperial Paris," &c. London: Booth, 307 Regent street. 1860.

This is a chatty, desultory volume, which will probably be found interesting by amateur military readers. The accounts of Minié (the inventor of the rifle that bears his name), of the Zouaves, and of the Foreign Legions of France, are pleasantly written. The most interesting part of the book is the memoir of Marshal de St Arnaud, whom the writer evidently admires, and whose published correspondence he condenses into a curious running narrative of soliloquy.

The Drawing-room Portrait Gallery of Eminent Personages. July to December, 1860. John Tallis, 199 Strand.

The "Drawing-room Portrait Gallery" contains, in a gracefully ornamented cloth binding, the twenty-six steel engravings that used to be published weekly with the *Illustrated News of the World*. The proprietors of that periodical, finding that the plates were frequently injured by transmission with the journal through the post, have adopted the plan of binding them separately, and forwarding the half-yearly collection in advance to their subscribers. The latter are decidedly the gainers by this arrangement, as their two guinea subscription covers the weekly illustrated journal and the two bound volumes of portraits. The engravings are taken from photographs; they are all thoroughly well executed, and most of them are good portraits. As it is designed to suit the tastes of a miscellaneous public, the selection of celebrities is necessarily very varied in character. The present collection includes a considerable number of popular preachers, several statesmen, and two or three eminent vocalists,—the Prince of Wales forming the frontispiece of the volume.

The Cornhill Magazine for November. Smith and Elder.

Macmillan's Magazine for November. Macmillan.

It would be fruitless and endless work to criticise Mr Ruskin's eccentric dissertations on all things human which he collects together under the form of a treatise on political economy chapter by chapter. We will only state that in the present chapter in the "Cornhill Magazine" he shows that he radically misunderstands, and has never come near understanding Mr Mill's distinction between the demand of an unproductive consumer for commodities and the demand for labour;—while, on the other hand, he has fairly stated the true assumption which underlies all sound theories of exchange, that exchange must be for the advantage of *both* exchanging parties, in variable relative proportions which other circumstances must determine. Mr Ruskin has now completed his preliminary chapters, and we hope to see him grope his way in future to something clearer, less rambling, and more scientific than he has hitherto achieved.

Mr Trollope's chapters of "Framley" Parsonage are as brilliant and humorous as the whole of his tale has hitherto been. It will, when completed, be a work of art quite equal in finish to "Barchester Towers,"—and one of wider range and deeper power. "Oratory" is a very good paper, full of acute observations and just judgment. Mr Thackeray's "Roundabout Journey" is a little poor,—and the verses in this number are very second-rate. Miss Proctor should really leave off writing this sort of sentimental stuff about strains of music; and Mr Owen Meredith harps very fatiguingly on the old string of dying men's feelings. The pathos of dying beds is a kind of poetical cant quite used up. Many of the papers, as for example that on "Weather," are substantial and valuable, as well as amusing. Mr Thackeray is to begin a new tale in the next number but one (for January).

"Macmillan's Magazine" has an interesting criticism on Keats by the Editor, a lively defence of mothers-in-law, and some admirable chapters of "Tom Brown at Oxford." There is a very interesting supplement to Mr Maurice's paper on "Political Ethics," with which we substantially agree, though we should demur to the *form* of Mr Maurice's theorem as to the relation between private judgment and the national conscience,—and a paper of interest on the "Blind," by Miss Mulock. On the whole, the number fairly fulfils its mission of being entertaining reading, written in a tone of mind always healthy, and generally noble, pure, and earnest.

Foreign Correspondence

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The convention fixing the tariff on a large portion of the articles of British production to be imported into France under the Commercial Treaty has been promulgated in due form in this country, as well as in England; the promulgation, however, having taken place two days later here than in London. On the tariff annexed to the convention two remarks are necessary: the first is that the duties on iron, cast iron, and steel, which figure at the head of it, were fixed towards the end of September, and have been actually in full since the 1st October; the second is that *the whole* of the remainder of the tariff does *not* come in too operation at once, but only as stated in Art. 10 of the Convention, that part of it which refers to "refined sugars, works in metal, machines, tools, and mechanical instruments of every description."

In execution of the said Article 10, the French Emperor has decreed that the duties on the following articles set forth in that tariff shall come into operation from this day, the 1st Nov. :—

Copper:—Ore, filings and old broken articles; ditto, and brass smelted, in pigs, bars, or plates; rolled or beaten into bars or sheets; wire of all sizes, whether polished or not; gilt or silvered, beaten, drawn, or rolled, and wire laid on thread or silk.

Zinc:—Ore, crude, calcined, or pounded, filings, and old broken articles; in pigs, bars, or plates; rolled.

Lead:—Ore and dross of all sorts, filings, and old broken articles; in pigs, bars, or plates; rolled or sheet, alloyed with antimony, in pig, and type, old.

Tin:—Ore and metal in pigs, bars, or plates, filings and old broken articles; alloyed with antimony (Britannia metal), in ingots; pure metal or alloyed, beaten or rolled.

Bismuth:—Crude.

Antimony:—Ore and sulphurated; metal and regulus.

Nickel:—Ore and speiss; pure, and alloyed with other metals; especially copper or zinc (argentine or German silver), in ingots or pigs; ditto, ditto, rolled or drawn.

Manganese:—Ore.

Arsenic:—Metallic.

Ores:—Not enumerated.

METAL MANUFACTURES.

Cast Iron:—Not turned nor polished:—1st Class. Chairs for railways, plates, and other castings from the open mould. 2d Class. Cylindrical pipes (straight), rafters, solid columns, and gas retorts. 3d Class. Pots and all other manufactures not included in the preceding classes; polished or turned; tinned, enamelled, or varnished.

Wrought Iron:—Ironwares (heavy), including framework, pieces of frames; knees and girders for ships: ironwork for carts and waggons; hinges, clamps, large bolts, braces, and other fastenings of doors and windows, not polished nor turned; gratines (solid), beds, seats, and furniture for gardens and other kinds, with or without ornaments or adjuncts in cast iron, steel, or copper. (N.B. Axles, springs, and tires for wheels are not included in the above category, but are classed among detached pieces of machinery.) Small ironwares ("serruerrie"), including locks and padlocks of all sorts, bolts and hinges, in sheet iron, latches, and flat bolts, and all other articles in wrought or sheet iron for fastenings of doors or windows, and furniture, polished, filed, or turned; nails, forged by machinery; ditto, ditto, by hand; wood screws, screw bolts, and nuts; anchors; chains, and chain cables; tools in pure iron, with or without handles; tubes of wrought iron, simply welded, of 9 millimètres interior diameter or more; ditto, ditto, less than 9 millimètres, and fittings of tubes; tubes in wrought iron, welded on a mandril, or lap-welded; fish-hooks (for sea fishing) tinned or not; household articles and other wares unenumerated, in wrought or sheet iron, polished or painted; ditto, ditto, enamelled, varnished, or tinned.

Steel Wares:—Tools in pure steel, files, saws, circular or straight, scythes, and other unenumerated; needles for sewing, less than 3 centimètres in lengths; ditto, of three and more centimètres in length; fish-hooks (for river fishing), bloed or not; metallic pens (other than gold or silver); small articles of ornament, such as beads, purse garniture, broocbes, and thimbles; household articles and other wares unenumerated.

Instruments, Surgical, Optical, and Philosophical—Arms, not being implements of war:—Side-arms, fire-arms.

SUNDAY METALS.

Tools of iron tipped with steel, with or without handles; articles made partly of cast and partly of wrought iron, not polished, if the weight of wrought iron is less than half the total weight; ditto, if half or more than half the total weight; ditto, polished, enamelled, or japanned, and with ornamental adjuncts in iron, copper, brass, or steel; wire gauze of iron or steel; cylinders of copper or brass for printing, whether engraved or not; copper wares, metal gauze of copper or brass, works of art and ornament, and all other manufactured articles of copper, pure or alloyed with zinc or tin; manufactures of zinc of all kinds; lead pipes, and all other manufactures of lead; printing type, new; tin pots and pans, and other manufactures of tin, whether pure or alloyed with antimony; manufactures of nickel allied with copper or zinc (argentine); plated manufactures of every description; manufactures of metal gilt or silvered by the mercurial or electro-plate processes; plate and jewellery of gold, of silver, platina, or other metals; clocks and watches; clock and watch movements.

MACHINES AND MACHINERY.

With Apparatus complete:—Steam-engines stationary, with or without boilers or flywheels; ditto, marine, with or without boilers, locomotives and portable engines; tenders for locomotive engines, complete; spinning machines; for weaving; for paper-making; for printing; for agricultural machines, and machines for making sheets and fillets of cards; lace-making machines; distilling apparatus, sugar-pans and boilers made of copper; carding machines, not furnished; steam boilers of sheet iron, of cylindrical or spherical shape, with or without boiler-pipes or heating-pipes; ditto, tubular, of sheet iron, with tubes of wrought iron, copper or brass, or of sheet iron rivetted, with interior furnaces, and all other boilers not of cylindrical or spherical shape; ditto, ditto, of sheet steel of every shape; gasometers, open boilers, furnaces and stoves, in sheet iron, or in cast and sheet iron; machines for making machines ('machines outils"), and machines not enumerated, containing 75 per cent. or more of their weight in cast iron, containing 50 per cent. and less than 75 per cent. of cast iron, containing less than 50 per cent. of cast iron.

Detached Parts of Machines:—Sheets and fillets of cards on leather, India rubber, or other materials; dents of reeds, in iron or in copper; reeds complete, in iron or in copper; pieces in cast iron, polished, filed, and adjusted; pieces in wrought iron, polished, filed, and adjusted or not, without distinction of weight; steel springs for carriages, waggons, or locomotives; pieces in steel, polished, filed, adjusted or not, weighing more than 1 kilogramme; ditto, 1 kilogramme and less; pieces in copper, pure or mixed with any other metals; sheets and fillets for cards of leather, caoutchouc, or other metals.

Gold leaf.

Refined sugar.

If this list be compared with the tariff annexed to the convention, it will be observed that the following articles are omitted:—

Cutlery.

Carriages.

Cabinet-makers' and turners' small wares, and wares in ivory or carved wood ("tabletterie").

Leather:—Prepared skins, varnished, dyed, and morocco leather; ditto, all other kinds; leather manufactures of all kinds.

Wooden Wares:—Empty casks, new or old not hooped, or hooped with wooden hoops; ditto, iron hoops; shovels, forks, rakes, handles of tools, of wood, with or without ferrules; oars; plates, spoons, porringers, and other household articles; pieces of carpenter's work, dressed or not; parts of cartwright's work, dressed or not; other articles of wood, not enumerated; household furniture.

Ships and boats, built in the United Kingdom, not registered or sailing under British flag, in wood; ditto, ditto, in iron; hulls of ships, in wood; ditto, ditto, in iron.

The said objects being omitted, it follows that the duties on them are *not* to come into force from the present 1st November.

The Commercial Treaty, Art. 15, fixed as follows the delays for the duties to be imposed:—1. For coal and coke, 1st July, 1860; 2. For iron, cast iron, and steel, 1st Oct., 1860; 3. For works in metals, machinery, tools, and mechanical instruments, before the 31st Dec., 1860; 4. For yarns and manufactures in flax and hemp, from the 1st June, 1861; and 5. For all other articles, from the 1st Oct., 1861. The duties of the articles of the first two categories are already in force; those of the third are to be so from this day, two months sooner than was obligatory on the French Government; those of the fourth have not yet been settled. With regard to the fifth category, reference to the treaty will show that it comprises refined sugar, turmeric in powder, rock crystal worked, chemical productions, extracts of dyewoods, garancine, soap, stoneware and earthenware, glass, crystal, mirrors, and plate-glass, cotton yarn, worsted and woollen yarn, cloth list, manufactures of hair, silk manufactures, manufactures of waste and floss silk, manufactures of bark and all other vegetable fibres, mixed manufactures of every description, hosiery, haberdashery and small-wares, articles of clothing, prepared skins, articles of every sort manufactured from leather or skins, carriages, cabinet ware, carved work, turnery, worked ivory and wood, brandies and spirits, ships and boats, &c. Now it will be observed, from the tables given above, that only one of the articles here specified—refined sugar—and one not specially named—gold leaf—are to be admitted into France at the duties mentioned in the tariff from this day. It will be observed, too, that of the other articles the duties on only a few have thus far been definitively settled.

Compared with the old tariff, the new one is certainly a marvel of wisdom and moderation. It goes also further than many people had expected. Yet, still not a few of its duties are much too high. Those on machinery, for example, must be considered excessive, seeing that the French, in spite of the high price they have hitherto had to pay for iron and steel and fuel, have for some time past made very considerable exports of machinery, and the export is steadily increasing. The duty of upwards of 16*l* English the ton on refined sugar is really exorbitant, considering that French refiners make large exports, not only all over Europe, but even to South America. But I have heard the very just remark made by a French statesman, that everything must not be expected of France at once; she has only just broken from the bonds of prohibition, and cannot plunge *instanter* into free trade.

An Imperial decree enacts that British goods brought into France in virtue of the treaty by any other means than by British or foreign vessels shall pay 25c per 100 kilogs if they be free of duty or only subject to one of less than 3*f* the 100 kilogs and to higher taxes when they pay more than 3*f*. Another decree enacts that the different categories of the said goods must be presented at the ports specially designated by the Customs regulations for receiving them.

A considerable number of manufacturers, dyers, and others of Rouen have petitioned the Government to be allowed to import, free of duty, the impermeable packing cloth which is made in England, and the like of which does not exist in France. They say that the article is really necessary for their exports, and that the introduction of it would no doubt lead to the establishment of manufactories of it in this country.

The formation of banks seems likely to become the order of the day in this city. Not long since the Credit Industriel Bank was formed; at this moment the Discount Bank is establishing branches in Asia; and now a project is on foot for starting, under the name of Credit Minier, one destined to make advances and give encouragements to ironworks and other metallurgic establishments. A scheme is also on foot for establishing, under the auspices of the Discount Bank (Comptoir d'Escompte), one for making advances and performing other operations in the colonies.

Some time ago the Municipality of Paris raised a large loan at a very moderate interest, but on the condition of giving a certain number of large prizes annually to be drawn by lot. More recently the Credit Foncier obtained one on similar terms. Improving on this system, two towns in the north of France, Roubaix and Turcoing, are endeavouring through an enterprising banker to raise a loan of 2,700,000*f* in 60,000 bonds of 45*f* each *without interest*, bu

subject to the condition that the bonds shall be at 50f in the space of 55 years, a certain number of them gaining prizes varying from 100f to 25,000f. It is justly remarked that in such a transaction as this the people foolish enough to subscribe will be completely victimised, inasmuch as it will be the interest on *their* money which will buy the lots. It is urged, too, that as lotteries for the purpose of raising money for the State have been put down, they ought not to be tolerated for municipalities.

This being All Saints' Day, is kept as a close holiday, and the Bourse is closed; hence the last business on the Bourse has been insignificant. It is true that the Warsaw meeting, which was expected to assume a hostile attitude towards France, is stated to have been a failure; but this has not increased confidence in the future. The quotations are as follow:—

	Thursday, Oct. 25.		Wednesday, Oct. 31.

An account of the markets is subjoined:—

Flour at *Paris*, yesterday, was at the same price as last week, 60f to 64f the sack of 159 kilogs,—a proof that business has not been active. The four marks for November were 60f 25c to 60f 50c; for late dates, 69f 50c.

Wheat at *Paris*, yesterday, was more extensively offered than last week, and prices were lower, 35f 50c to 38f the sack of 120 kilogs. Of the principal markets, 35 present a rise of 9c to 2f the hectolitre, 51 a fall of from 5c to 1f 25c, 22 remained unchanged, and 31 are reported firm.

Cotton.—At *Havre*, in the week ending Friday, a fair amount of business was done, the sales having been 10,647 bales. The arrivals were only 3,661 bales. The closing prices remained the same as in the previous week: low New Orleans, 89f the 50 kilogs; very ordinary ditto, 96f. This week, business has been very active, and prices have undergone a marked rise, low New Orleans being yesterday at 92f.

Sugar.—Business was calm at *Havre*, in the week ending Friday: 268 casks French West India went at 49f 75c duty paid the 50 kilogs; 1,830 casks Havana disposable, or in the port, 37f 50c to 38f in bond. The arrivals were about 4,750 casks. This week, sales have not been large: French West India at 49f 50c to 49f 75c; San Yago, 48f duty paid. At *Bordeaux*, last week, 20 casks French West India went at 49f; 200 bales Reunion, 55f; 4,244 bales Mauritius were also sold. Nothing important done this week. At *Nantes*, last week, 4,000 sacks Mauritius went at 52f 75c; a small lot of French West India, 49f 25c; 600 sacks Reunion, gros grain, 52f 50c to 58f; and 1,600 Reunion and Mayotte, very common quality, 37f 50c—the latter for England. This week, a small lot of Java has been sold at 51f; 1,000 sacks Mayotte, very common, for England, 38f 25c; a small lot of French West India, 48f 75c to 49f. At *Marseilles*, last week, 1,100 casks Havana went at 38f 50c.

Coffee.—The demand at *Havre*, in the week ending Friday, was regular. 200 sacks Hayti Port-au-Prince went at 79f 50c to 80f the 50 kilogs in bond; 215 ditto Cape and St Marc, 82f and 82f 50c; 252 Gonaives, 83f to 85f; 463 Rio not washed, 77f 50c; 2,200 ditto for delivery, 75f to 85f, the last price being for Laguayra; 276 sacks Rio washed, 82f to 83f; 223 Porto Cabello, 89f; 900 Ceylon triage, 108f 25c to 109f duty paid; a small lot of Ceylon plantation, 119f to 130f; 150 sacks Mysore, 114f; and a lot Malabar, 111f 50c. The arrivals consisted only of some small quantities from Nantes, Bordeaux, and England. This week have been sold a large lot of Manilla, at prices kept secret; one of Rio not washed, 76f 50c; a small one of Hayti, 79f. At *Bordeaux*, last week, business was calm, but prices were firm: Rio washed, 94f; ditto not washed, 74f. This week, a quantity of Rio has been sold; prices not stated. At *Nantes*, last week, the sole sale recorded was a small lot of Reunion *feve ronde* at 133f. Nothing done this week. At *Marseilles*, last week, 1,500 sacks St Domingo went at 79f 50c to 80f; 1,000 sacks Rio not washed, 73f to 76f; a small lot of Mocha, 115f.

Indigo.—At *Havre*, in the week ending Friday, about 40 cases Bengal were sold at prices not stated, and the arrivals were 88 cases from England. This week, only about 24 cases Bengal have been sold, and they obtained 25c to 30c above the estimates. At *Bordeaux*, last week, nothing worth mentioning was done in Bengal, and 60 cases Madras went at prices not stated. Soma lots Bengal, Madras, and Kurpah have been sold this week, but prices are not given.

Hides.—At *Havre*, in the week ending Friday, business was calm: 658 Buenos Ayres dry, disposable, 130f the 50 kilogs duty paid; 100 Pernambuco dry-salted, 96f; 730 ditto salted, 67f 50c; 930 horse salted La Plata, 102f 50c the 100 kilogs. The arrivals were about 4,000. A good deal of business has been done this week: Rio Janeiro salted, 62f 50c; Monte Video dry, 135f to 137f 50c; Monte Video horse salted, 100f to 102f 50c the 100 kilogs.

Tallow.—At *Havre*, in the week ending Friday, a small lot of Russia, for delivery in November, was taken at 72f 50c the 50 kilogs duty paid; ne of New York at 71f 50c; and 5 tons of native at 71f. The arrivals were 430 casks. At *Paris*, yesterday, the 100 kilogrammes were 140f 50c.

Wool.—At *Havre*, in the week ending Friday, 10 bales Monte Video unwashed, went at 2f 50c the kilog; 9 Spain, 2f; 26 Peru, 2f 60c; and 160 bales Peru white and black, 2f 42½c to 2f 57½c. The arrivals exceeded 300 bales. This week two public sales have taken place. Upwards of 1,700 bales were disposed of at a small decline on the quotations of the last sales in August.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was 103f the hectolitre; 3-6 Montpellier, 150f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 140f.

Brussels, Oct. 30.

A company with a capital of 5,000,000f has been formed in this city, on the plan of some which exist at Antwerp and Liege, for the purpose of making advances on security of merchandise.

The Company of the Ironworks and Coal-pits of Selessin states that its profits for the year 1859-60 were, after deducting 4,301,248f for the reserve and the sinking fund, 556,554f.

Geneva, Oct. 29.

The report of the Banque Generale de Suisse (an institution on the Credit Mobilier principle), on its operations for the year ending 30th June, which was read in a recent meeting of shareholders, has just been published. It appears from it that the Bank embarked in various speculations which turned out ill, and that a sum of 2,481,220f has had to be set apart for the present year towards the payment of losses occasioned thereby. The enterprises in which the Bank engaged were of a somewhat varied nature—the Gas Union Company of Paris, the railway from Florence to Arezzo, the Pio Latma Railway, the Gas Works at Seville, the construction of a street to be called the Rue de l'Imperatrice at Lyons, the mines of Karizas in Algeria, &c. Out of some of these undertakings, however, the Bank has retired with more or less loss.

Correspondence.

GRAND TRUNK RAILWAY OF CANADA.

TO THE EDITOR OF THE ECONOMIST.

Sir,—I have read with much interest your able articles in your numbers of the 6th and 13th inst., on the subject of this unfortunate Railway. Your arguments are unanswerable as regards the moral, if not legal, responsibility of the Government and people of Canada to make good to those who have found the money to construct this great Trunk Railway an income equal to 25*l* per week. It is not in my power, nor do I wish to add anything to what you have advanced on this point—it is too clear to be controverted; but it has occurred to me that I might do some good by supplementing your statements with some proposals, which, if not accepted by both parties, might at least lead to some such results being arrived at.

All must admit that the present state of matters is bad, not only for the bond and shareholders, but equally so for the Province of Canada, and that they are likely so to continue, until the capital is found to improve the stations and provide rolling stock. The sum required for these purposes has been named as 1,500,000*l*, but let us assume that 1,000,000*l* will suffice for some time to come.

My first proposal is, that application be made to the Government of Canada to raise the sum of 1,000,000*l*, under the guarantee of the Province, at 5 per cent.—the bonds to be offered in the first instance to the holders of Grand Trunk bonds and shares, and if not taken up by them, to the public.

My second proposal is, that application be made at the same time for the payment of the following rates per cent. on the different issues of bonds and on the shares, which, I think, ought to be agreed to by all parties, viz.:—

	£		£
On the 1st preference bonds	2,000,000	at 5 per cent. per annum	100,000
On the 2nd preference bonds	1,111,500	at 4 per cent. per annum	44,460
On the ordinary bonds	2,423,800	at 4 per cent. per annum	96,952
On the ordinary bonds	1,500,000	at 4 per cent. per annum	60,000
On the shares	2,781,600	at 3 per cent. per annum	83,448
The new issue 1,000,000*l* at 5 per cent. would be			50,000
The rent payable to the Atlantic line			73,000
Total annual charge			507,860

Let us now see what portion of this the Government and people of Canada would be likely to be called upon to find.

It may I think be assumed, that even *under the present management* and miserable accommodation at the stations and supply of rolling stock, the sum of 15*l* per mile per week may be earned. Last week's return of traffic showed a take of 16*l* 10s per mile, but taking 15*l* per mile for the first calculation, it would yield,

		£		£
Allowing 60 per cent. for working,		343,200	net, or a deficiency of	164,660
17*l* 10s per mile	ditto	401,400	— ditto	106,460
20*l* —	ditto	457,600	— ditto	50,260
22*l* 10s —	ditto	504,800	— ditto	3,060
25*l* —	ditto	572,000	— or a surplus of	64,140

We have now got at the most unfavourable position in which the guarantees I have proposed could place the Government and people of Canada, viz., a deficiency of 164,660*l* per annum; but who will say that, with a judicious and honest outlay of 1,000,000*l* sterling in providing the needful accommodation at the principal stations and rolling stock, the traffic of this great Trunk Line would be limited to 15*l* per mile, or even 30*l* per mile per week? But for whatever deficiency might accrue, I would propose that 50 per cent. of all surplus beyond the guarantees should half-yearly or yearly be handed over to the Government of Canada, until the gross deficiency be fully paid back, with interest if demanded, and that the other moiety of any such surplus be applied in the first instance to maintaining the railway and rolling stock in efficient condition if necessary, and afterwards in augmenting the interest to the bondholders and shareholders *pro rata*.

In conclusion, I do not hesitate to say, that so favourable do I consider the proposals I have made as regards the Province of Canada, that that Government should abandon for ever all claim for interest on the 3,000,000*l* odd advanced to the Grand Trunk.—Your obedient servant,

MANCUINENSIS.

P.S.—You will observe that I have taken the working expenses at 60 per cent.: this is a high rate even in America. I believe that if the line be carefully managed, the working expenses would not exceed 50 per cent., in which case the surplus at 25*l* per mile per week would be 202,140*l*.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You have been betrayed into serious error in your statement of the financial position and prospects of the Grand Trunk Railway of Canada, and, as the misinformed public will be readily misled by the statement of your paper, I trust you will lose no time in publishing the correct figures which I furnish herewith.

At page 4 of the last financial report of the Company, published in March last, you will find the debt detailed as follows:—

	£			£
1st and 2nd Preference bonds	3,111,500	interest at	6 per cent.	186,690
Ordinary bonds	2,423,800	—	6 per cent.	145,420
Ditto	1,500,000	—	7 per cent.	105,000
Floating debt*	1,200,000	say at	7 per cent.	81,000
(This last amount could not be funded even at 10 per cent.)				
Atlantic and St Lawrence interest under lease				75,000
Detroit and Port Huron debt 450,000*l*—½ at 8 per cent. and ½ at 6 per cent.				31,500
				627,610
To this must be added interest on 566,000*l* required to complete work and rolling stock at 7 per cent.				39,620
Annual liability for interest				667,230
Your estimate				420,000
Error				247,000

The error being equal to 5,000*l* per week net revenue.

Further, you have computed the working expenses at 50 per cent. on a traffic of 17*l* per mile per week, say 8*l* 10*s* per mile. In 1857, the Grand Trunk working expenses, with a traffic of 11½*l* per mile per week, was 10*l* 10*s*; in 1858, the working expenses, with a traffic of 10½*l* per mile per week, was 10*l*. Considering that the line was then new, the capital account open, and there being then strong inducement to make the revenue statements as favourable as possible, it is not likely that, with the 17*l* traffic, the working rate will be reduced to 8½*l*. Many well-informed persons compute the present working expenses of the Grand Trunk, with allowance for wear and tear of line and plant, at 100 per cent. of the traffic; but if we allow the same proportion of working expenses as the Great Western of Canada, you will find that by the time the Grand Trunk traffic has reached 30*l* per mile per week, and working expenses about 17*l*, the net revenue will then, and only then, provide for the annual interest, without making up any arrears or paying any return to the shareholders.

This may seem a very gloomy view of the Company's affairs; but a careful examination of the subject will convince any one, and the future will certainly show, that my estimate is rather too favourable than otherwise.—I am, Sir, your obedient servant,

CANADIAN.

[We insert this letter in order to place before our readers the views of opposite parties. "Canadian" obviously leans towards the darkest view of the facts, and he introduces items not at present fairly admissible. We expressly said in our second article that the figures there given were purposely approximate only. As regards the working expenses, it appears to us that "Canadian" falls into manifest exaggeration.—ED. ECON.]

* The report expects a reversion from the sale of 1,600,000*l* securities, on which money had been raised. The prices realised, however, would rather show a loss than a gain.

COMMERCIAL AND MSCELLANEOUS NEWS.

The latest advices from Jamaica state that the prices of coffee were expected to continue without much change until the new crop came to market; 46*s* to 48*s* continued the ruling figure for the limited quantity offering. Sugars were quoted 21*s* to 23*s* for fair and 18*s* for dark. From Demerara we learn that the weather had been generally dry, with occasional thunderstorms and heavy rains. The estates were actively engaged in manufacturing operations. The exports for the fortnight included—Sugar, 2,147 hogsheads, 226 tierces, 727 barrels, and 562 bags; molasses, 128 casks; rum, 680 puncheons, 178 hogsheads, and 95 barrels. Trade continued very bad.

The following report shows the state of the Albany lumber market for the week ending October 17:—Lumber comes in slowly from all points, but the daily arrivals are mostly of kinds wanted to make up the assortment in market. This at present is very good, though there is but a small stock of hemlock and spruce. Prices are firm at our present quotations, and sales are active. Shipments are large, all the wharves being occupied by vessels taking in cargoes for the East and South. A noticeable feature of the week has been the attendance of Southern buyers laying in their winter stock. Freights are active. All the vessels arriving in port have, as yet, found ready freights at the high prices reported last week. The receipts by the Erie and Champlain canals, during the second week in October, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1858	7277036	987	1375	3956300
1859	2337000	196	...	...
1860	9135000	370	...	3571000

The apparent large increase in the receipts of boards and scantling during the past week over that of the corresponding one of last season can be attributed to breaks which occurred during the second and third weeks in 1859. The receipts have been moderate for the season, they being a little over nine millions. The receipts by the Erie and Champlain canals, from the opening of navigation to October 15th, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles M.	Timber. C. ft.	Staves lbs.
1858	218673770	26782	102178	127131917
1859	289036762	41961	66231	102633503
1860	258773600	37397	37780	119998877

An account, pursuant to the Act 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 20th day of October, 1860:—

The market remains very buoyant, under a continued unusually active demand, and holders have been enabled to establish a further advance of ¼c on all descriptions. There has prevailed an increased inquiry for export, superinduced by the continued favourable advices from Europe, and large transactions are reported for shipment at the improvement noticed above. A considerable speculative feeling is likewise manifest, and spinners have purchased freely,—the sales are therefore very heavy, amounting, in the aggregate, to 22,000 bales, including about 10,000 in transit, of which a part were resales, in some cases at an advance of ¼c on the previous sales. We revise our quotations to correspond to the closing rates yesterday, remarking that the market closed buoyantly and with a tendency to higher prices. We quote:—

There has been much excitement in the cotton market this week. Reports from America of injury to the growing crop have induced large speculative operations, and other buyers have done an extensive business. Holders of American have obtained an advance in almost all grades of $\frac{1}{8}$d per lb, and in a few cases even more. Our quotations are raised accordingly. Egyptian have been more saleable, and have commanded full rates. Brazils are held for much higher prices. East India are in good request, but have not advanced quite in the ratio of American. The sales to-day are 12,000 bales. There is less excitement, but prices are quite firm. The reported export amounts to 9,770 bales, consisting of 2,650 American, 20 Brazil, and 7,100 East India.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, Oct. 21.—Flour and Meal.—The market for State and Western flour has been somewhat irregular during the past three days, and prices have fluctuated considerably. On Wednesday there prevailed an active demand, both from the local and Eastern trade and for export, enabling holders to obtain an advance of 5 to 10 cents per bbl on the closing rates on Tuesday last, at which shippers operate freely. The inquiry subsequently abated, however, when the market became depressed, and the advance previously established was lost, except on shipping brands of Western, which are scarce and wanted. Transactions since Tuesday comprise 60,000 bbls, closing heavily at the reduced rates. The market for Southern flour partakes of the dull tone which characterises that of other descriptions, but prices are substantially the same as those previously inserted.

Export, from 1st to 16th October.

	1860 barrels	1859 barrels
Wheat Flour	152,822	90,943

Grain.—The market for wheat, sympathising with that of flour, became very firm immediately subsequent to the date of our last, and a corresponding activity prevailed both for local milling and shipment, when transactions were on a larger scale than on any previous day this season, reaching to within a fraction of three hundred thousand bushels. An advance of one cent per bushel was readily obtained. In consequence of an advance in the rates of freight and a falling off in the demand for export, the market afterwards lost the buoyancy which characterised it on Wednesday, and became depressed in tone, while prices have declined considerably—a moderate business doing at the reduction. Corn has been in fair request for the most part at full previous prices, but the market was heavy yesterday, and prices a shade lower; the sales comprise 268,0000 bushels.

Export, from 1st to 16th October.

	1860 bushels	1859 bushels
Wheat	1,458,370	29,938
Corn	38,372	7,052

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

The leading markets of consumption, held since we last wrote, have been but moderately supplied with English wheat, which has come to hand in somewhat improved condition. For good and fine samples, there has been a steady demand, at full prices; but all other kinds have moved off heavily, at barely previous rates. At the outports, foreign wheat, notwithstanding that the arrivals have continued seasonably large, has changed hands freely, at fully the late advance in the quotations. There has been an active sale for most descriptions of barley, the rates of which have, in some instances, further improved 1s per quarter. For malt, the inquiry has ruled tolerably active, at extreme currencies. There has been a firm sale for oats, at 6d to 1s per quarter above previous rates. Both beans and peas have commanded 1s per quarter more money, and the inquiry for flour has been tolerably healthy. In prices, however, no change has taken place.

Advices from most parts of the country state that a few patches of wheat and other kinds of produce are still in the fields, and that the new wheats continue to turn out a most indifferent sample as to quality. We imagine, therefore, that fine dry samples will command full prices during the remainder of the present year; but we doubt much whether they will be supported after the grain now in stack has become hardened and more fit for use in the spring. All spring corn will, however, be selling at extreme rates for some considerable period, since it is evident that we shall be chiefly dependent upon foreign supplies to meet our necessities.

In Scotland, harvest work is now nearly or quite closed. The produce of the crops, generally, is represented as very large and of superior quality; however, during the winter months heavy shipments will, no doubt, be made to the South, where high rates will be obtained, especially for malting barley, which is held as high as 55s per qr. The potato crop is turning out well, both as to quantity and quality, and large quantities have already found their way to London, where they have realised 120s to 150s per ton.

Advices from Ireland state that the crops are yielding badly; but they are somewhat silent as respects potatoes, which, in some of the markets, are selling at low rates. The exports to England have continued on a very moderate scale.

Most of the continental markets have been steady for all kinds of wheat, at very full prices. Barley, oats, beans, and peas have commanded rather more money. In the United States, wheat, Indian corn, and flour have changed hands freely for shipment to England, and the quotations have had an upward tendency. The supplies on offer were very large.

The show of English wheat here to-day was limited. Good and fine samples were disposed at full prices; but inferior kinds were a dull inquiry. Foreign wheat changed hands slowly, but at fully previous rates. Barley and malt were quite as dear as last week, and oats advanced 6d to 1s per quarter. Beans, peas, and flour supported Monday's currency.

Mr Ed. Rainford thus reports the state of the floating trade. Since the 24th ult. up to last night 37 arrivals off coast are reported, consisting of 24 cargoes of wheat, 11 maize, and 2 barley, viz.:—Wheat, 1 cargo from Trieste, 6 Alexandria, 1 Galatz, 11 Taganrog, 3 Odessa, 1 Malta, 1 Catania; maize, 3 Constantinople, 1 Galatz, 4 Sulina, 1 Tricste, 1 Casabianca, 1 Ibraila; barley, 1 Ibraila, 1 Messina. About 12 of the above had changed owners before arrival. A fair business has been done this week in wheat and maize afloat; very little, however, was taken of the latter till yesterday, when previous rates were paid. The following are the prices realised, according to condition, quality, &c.:—Wheat, arrived, Berdianski at 58s 6d, 58s 9d, and 59s; Marianople, damaged, 57s 7½d; Taganrog Ghirka at 55s 3d to 56s 6d; hard Taganrog, 55s 7½d, 55s 9d, 56s; Sicilian, 62s, all per 492 lbs; American Milwaukee red Western, at 59s per qr; Saide, 45s; and Behira, 44s per imperial qr; to be shipped before the winter, Berdianski or Marianople at 60s per 492 lbs. Maize, arrived, Galatz, imperfect, at 39s and 39s 6d; Turkish, imperfect, 39s, all per 492 lbs; Ibraila, perfect, 40s; Moldavian, heated and discoloured, 38s 6d; Racova, warm, but dry, 39s 6d, all per 480 lbs: on passage, Galatz, September and October shipments, 41s per 492 lbs; Ibraila, 39s per 480 lbs; shipping or to be shipped, Odessa, about 6,000 qrs, at 41s per 492 lbs; to be shipped, January to March next, Odessa, about 8,000 qrs, at 41s per 492 lbs. Barley, on passage, all per 400 lbs, Taganrog, 31s 3d; Danubian, 30s 9d; Ibraila, 31s and 31s 6d; now shipping, Taganrog, 31s 6d; Odessa, 31s; to be shipped by the end of 1860, Odessa, 31s. Beans, on passage, Barbary, for London direct, at equal to about 36s 4½d.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 31st day of October, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	27,862,550	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	13,387,550
		Silver Bullion	...
	27,862,550		27,862,550

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,413,273
Rest	3,138,965	Other Securities	9,753,226
Public Deposits, including Exchequer, Savings Banks, Commissioners of National Debt, and Dividend Accounts	4,156,309	Notes	6,359,120
Other Deposits	13,736,933	Gold and Silver Coin	740,323
Seven Day and other Bills	762,735		
	36,347,942		36,347,942

Dated the 1st November, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,266,165	Securities	29,170,499
Public Deposits	4,156,309	Coin and Bullion	14,127,873
Private Deposits	13,736,933		
	40,159,407		43,298,372

The balance of Assets above Liabilities being 3,138,965*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£24,886
An INCREASE of Public Deposits of	743,564
A DECREASE of Other Deposits of	1,049,665
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	33,577
A DECREASE of Bullion of	307,403
An INCREASE of Rest of	7,389
A DECREASE of Reserve of	363,768

The present Bank return still continues unfavourable, the bullion having again diminished to the extent of 307,403*l*. There is also a decrease in the other deposits to the extent of 1,049,665*l*, and in the reserve of 363,768*l*. The Government deposits have, however, increased 743,564*l*.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,101,602	£ 21,079,942	£ 22,222,108	£ 23,226,627	£ 22,266,165
Public deposits	6,594,381	4,871,944	6,576,441	5,512,598	4,156,309
Other deposits	9,932,226	11,910,670	12,249,726	14,371,619	13,736,933
Government securities	14,228,901	10,120,104	10,809,467	10,875,157	9,490,273
Other securities	11,038,486	22,628,251	14,807,909	18,809,026	19,758,226
Reserve of notes & coin	10,303,520	2,706,035	11,725,040	8,991,931	7,099,443
Coin and bullion	16,025,215	8,497,780	18,612,885	16,856,386	14,127,873
Bank rate of discount	2½ p. c.	9 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	97⅞	89¼	98	96⅛	93
Average price of wheat	40s 2d	53s 11d	42s 10d	43s 1d	59s 11d
Exchange on Paris (shrt)	25 12½ 17½	25 30	25 5 10	25 7½ 12½	25 12½ 20
— Amsterdam ditto	11 16½ 17	11 16	11 14 15	11 13 13½	11 14⅛ ⅛
— Hamburg (3 months)	13 8½ 8¾	13 10	13 6½	13 5 5½	13 5⅞ 6

In 1850, money was remarkably easy, and commerce was beginning to feel the effects of the gold discoveries. A great demand existed for silver. People were beginning to speculate on the appreciation of gold and silver. The substitution of a silver for a gold standard in Holland had given rise to much speculative opinion on the subject.

On Thursday, the 5th of November, 1857, the Bank rate of discount was raised from 8 to 9 per cent. Extreme gloom prevailed in all commercial and monetary circles. There was a great pressure on the Bank both for bullion and discounts. Large quantities of sovereigns were being draughted away for the Irish and Scotch banks as well as for the United States, the exchange at New York on London being quoted at 104 to 105 per cent. The last steamer to the East had taken no less than 956,000*l* in specie, partly on Government account. The reserve of notes in the Bank was reduced to 2,155,315*l*, although it was remarked as symptomatic of the growth of alarm in commercial circles that a considerable portion of the advances obtained on "other" securities were at once relodged in the Bank as deposit,

In 1858, the demand for money showed a partial revival, consequent in part upon the payments on account of the Turkish and Indian loans, coupled with the calls on the Indian railways; but the rate of discount in Lombard street did not exceed 2½ per cent. Chili was carrying on negotiations here with a view raising a loan of 1,500,000*l*.

In 1859, payments on account of Indian railways and 440,000*l* on account of the Victoria Government loan, and the issue of 1,600,000*l* in Debentures of the East Indian Railway, caused rather an active demand for money. A great demand for specie for export to the Continent and India existed; but it was met by large bullion remittances from the West Indies, United States, and Melbourne.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,106,260*l*; in 1857, a deficiency of 10,717,581*l*; in 1858, a deficiency of 2,558,183*l*; and in 1859, a deficiency of 4,237,407*l*. In 1860, the deficiency is 6,031,293*l*

DISCOUNT AND MONEY MARKET.—There has been great ease in the money market during the week. The bulk of the discount business has been transacted at 4 per cent. for paper having two months to run; but bills of a shorter date have been discounted at 3¾ and ⅞, and there is no doubt that the discount houses would be glad to discount paper having a few days to run on still easier terms. Bills having six months to run are charged from 5 to 6 per cent. The continued drain of gold from the Bank of England has the effect of causing the greatest caution on the part of the discount houses, for in the event of the Bank raising the rate of discount, they have to allow a corresponding rise on the money they have taken at call. The rate of money in the Stock Exchange is 1¾ to 2¼ on Government securities. The rate on call allowed by the discount houses is 3 per cent., and 3¼ at seven days' notice.

No gold has been taken from the Bank of England to-day, but the demand for discount there has been active, in preparation for the bills falling due on the 4th of the month, which have to be paid to-morrow.

The following are the rates of discount at

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3½	3
Hamburg	No Bank rate	2½
Brussels	3	3
Frankfort	2	1½
London	4	3¾
St Petersburg	5	5½
Vienna	5½	5½

ENGLISH FUNDS.—There has been very little business doing in the English funds, the price has remained almost stationary at 92⅞ 3. Consols are, comparatively speaking, scarce; but there has been a plentiful supply of New 3 per Cents. and Reduced at 91¼ ⅜, which has tended to keep the market heavy. Exchequer Bills, 2 dis. to 2 pm.

FOREIGN FUNDS.—The principal feature in foreign funds has been a rise in Turkish Bonds, in consequence of a rumour that the Turkish Government has succeeded in raising a loan with Messrs Mires and Co., of Paris. Certain it is that the internal debt of Turkey has risen at Constantinople considerably. If Turkey is about to enter into certain commercial reforms, having for their object an increase in the revenue, and at the same time she curtails her expenditure, we can understand that Turkish credit will rise considerably in Europe; but we do not see why it should rise because Turkey has succeeded in getting further into debt by raising a 6 per cent. loan at 50. We trust that British capitalists will set their faces against such a loan, which can only tend to bring Turkey to ruin. We have before stated that if the Governments of France and England really wish to serve Turkey, the best way would be to allow her to raise her import duties from 5 to 10 per cent., and lower her export duties in a corresponding ratio. Turkish Bonds of 1858, which in the early part of the week were 55, have risen to 58; and the old loan from 69¼ to 70½. Mexican Bonds have receded, owing to the wretched state of anarchy to which Mexico is reduced.

French funds opened this morning at 69.50, and close 69.30.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

RAILWAYS.—The settlement of the share account passed off very quietly, and the continuations were moderate; it is evident, however, that shares have been brought to market, and on the whole the railway market has been heavy.

There has been a considerable depression in Grand Trunk of Canada shares since the publication of the report, of which we gave an abstract last week. The traffic returns, however, are satisfactory, showing a great increase over last year's receipts. The shareholders must wait the result of the Commission the Government of Canada are about to issue. It can, however, have but one result, and that is the liberal assistance on the part of the Government; and we trust they will either guarantee the two millions the Company require to relieve them from their liabilities, and place the line in an efficient state of working, or take the line off the Company's hands altogether on equitable terms. The interest on the bonds of the Atlantic and St. Lawrence Railway, which fell due on the 1st, has been duly paid.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day :—

BULLION.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes :—

Gold.—The Red Jacket, with 152,000*l*, has arrived from Melbourne; this amount, however, has been quite insufficient to supply the immediate wants of the exporters, consequently about 185,000*l* has been withdrawn from the Bank, and further amounts will undoubtedly soon follow. The Swiftsure and the Water Nymph, bringing together about 605,000*l*, may now be considered as due. The Seine brings 50,500*l* from the West Indies, and this amount, when delivered, will also be sent away.

Silver.—The Seine brings about 252,000*l* in silver and dollars; but this amount can scarcely be delivered in time for the outward China mail of the 2nd instant, that being the last day for packing the specie. This is, however, not of much consequence, as, owing to the delay in the arrival of the mail, the letters will not be in London until Saturday 3rd; consequently any orders that may be contained therein, will not be executed until the mail of the 18th November. We quote the price as 61¾d per ounce standard, with a quiet market.

Mexican Dollars.—The West India steamer has brought 252,000*l* in silver and dollars, but we are unable to state the amounts of each; the dollars are not available, however, for the next outward China mail. There have been but few orders in the market, owing to the late arrival of the homeward mail from China, and any orders that may be contained in the letters will be sent by the next mail of the 18th instant.

Exchange.—We have no alteration to report since our circular of 25th ultimo. Bank drafts at 60 days' sight are 2s to 2s 0¼d; documented bills, 1s 11½d.

India Government Loan Notes.—The market is still much depressed, and rates are lower than last week. Five per Cents. are 95⅛, and 5½ per Cents. 101⅛.

Quotations for Bullion.—Gold—Bar gold, 77s 10d per oz std; bar gold, fine, 77s 10d per oz std; bar gold refinable, 78s 1d per oz std; Spanish doubloons, 76s 3d to 76s 6d per oz, last price; South American doubloons, 74s 6d per oz, last price; United States gold coin, 76s 4d per oz, last price. Silver—Bar silver, containing 5 grs gold, 5s 2d per oz std, last price; fine cake silver, 5s 6½d per oz, last price; Mexican dollars, 5s 2⅝d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price.

FAILURES.—Messrs Robert Davies and Co., the bankers of Shoreditch, have stopped payment, with liabilities to the extent of 140,000*l*. The liquidation, it is feared, will prove unfavourable, probably not exceeding 10s in the £.

The London and County Bank will open a branch in Shoreditch. The following circulars have been issued :—

187 Shoreditch, Oct. 26.

Sir,—In consequence of the failure of a firm which is largely indebted to us, we are under the painful necessity of closing our banking house.

Under these circumstances we have applied to the London and County Bank to lessen, as far as possible, the immediate inconvenience to our customers by making advances to them, which, as we have been this day informed, may be obtained on application at their banking house, South Sea House, Threadneedle street.

A meeting of our creditors will be held at the London Tavern in Bishopsgate street, on Monday next, the 29th inst., at 12 for 1 o clock precisely, at which you are particularly requested to attend.—We are, Sir, your very obedient servants,

ROBERT DAVIES and Co.

187 Shoreditch, Oct. 27.

Sir,—Adjudication in bankruptcy having been given this morning at the instance of one of our principal creditors, the proposed meeting on Monday next, the 29th instant, at the London Tavern, is therefore postponed.—We are, Sir, your very obedient servants,

ROBERT DAVIES and Co.

London and County Bank, Oct. 27.

Sir,—Messrs Robert Davies and Co., bankers, of Shoreditch, having been compelled to suspend payment, and having applied to this bank to afford facilities to such of their customers as may desire it, I am authorised to acquaint you, that an advance of a sum equal to 7s in the pound, on the balances due to the customers of Messrs Davies and Co., will be placed to the credit of such customers in account with this bank, as a temporary accommodation, pending the realisation of the assets of Messrs Davies and Co. The parties will, however, be required to give the security of their anticipated dividends for the advance, until it shall be repaid.

I am also desired to state that the Directors of the London and County Bank intend to open a branch of this bank in Shoreditch with as little delay as possible.—I am, &c.,

W. MCKEWAN, General Manager.

In the Bankruptcy Court, on Tuesday, Messrs R. C. Davies and J. N. Troughton, the partners in the late Shoreditch Bank, surrendered and obtained protection. The sitting for the choice of assignees is fixed for the 12th of November. On Thursday there was a meeting of the creditors. The proceedings were of a tumultuous and angry character. Resolutions were adopted suggesting certain persons as suitable in the opinion of the meeting to act as trade assignees. Mr Fox, the solicitor of Messrs Davies and Co., was present, and alleged that the firm shows assets to the amount of 10s or 12s in the pound, irrespective of the debt of Messrs Evans and Co., which he put at 53,000*l*. Messrs Davies and Co. hold mortgage of premises, upon which, however, there appears to be prior liens to some amount. A creditor remarked he had heard that the loss on Messrs Evans' debt would not exceed 15s in the pound: but this view was considered a sanguine one. A resolution was finally passed, that in the opinion of the meeting, steps ought to be taken to supersede the proceedings in bankruptcy, provided a satisfactory arrangement can be arrived at with

Messrs Davies and Co.; and the committee, together with the gentlemen proposed as assignees, were directed to communicate, through Mr Fox, with Messrs Davies and Co. on the subject. The wish to avoid proceedings in bankruptcy was evidently dictated by a fear of the expense, which one creditor declared, according to his own experience, was never less than from 33 to 50 per cent. of the value of the estate to be administered.

A meeting was also held of the creditors of Messrs Evans Brothers, builders and contractors, who recently failed. Their liabilities amount to 41,424*l*, and assets to 24,911*l*. The amount due to Messrs Davies and Co., bankers, of Shoreditch, for advances made, was stated at 48,800*l*. It was also explained that the firm is not in a position to make any proposal, the assets representing mostly balances on contracts, so that no clear idea can be formed of the probable ultimate position of the estate. After some discussion, a committee was appointed to examine into the affairs of the firm, and to report to a future meeting. There is a disposition, however, on the part of some creditors to place the estate in the Court of Bankruptcy.

The recent failures in Brazil have not been confined to Rio Janeiro, but have extended up the coast to Bahia and Pernambuco, where they have been more numerous, although not so large in amount. At Bahia, especially, the havoc in the dry goods trade has been general, and the total suspensions at that port and Pernambuco are variously estimated in this year to have amounted from 250,000*l* to 500,000*l*. The system of fraud which has lately disgraced the commercial world elsewhere appears at the same time to have developed itself in these localities. An agent at Maceio, who has acted on behalf of several English houses in Bahia and Pernambuco, has been reporting purchases of produce which were never made, and drawing on the parties for the pretended cost. In one case a vessel having been sent to load with produce which had been advised as being in store, found on her arrival at Maceio that no goods existed. The actual extent of these delinquencies is not mentioned.

Miscellaneous.—At a special meeting of the Oriental Bank, Mr H. Gordon in the chair, a dividend was declared for the past half-year at the rate of 14 per cent. per annum, free of income tax. It was announced, with reference to the question of double income tax, that an amicable suit had been instituted between the Bank and the Indian authorities, and that it will shortly come before the Court of Exchequer. The Bank has reason to expect a favourable decision.

A further sum of 680,000*l* is required for the China war in addition to the estimates already laid before Parliament, making a total of 4,886,704*l*.

The experiment of a small gold coinage in America appears to have ended unsatisfactorily. When the dollar pieces were first introduced, shortly after the Californian discoveries, they were eagerly sought in all quarters, and since that period the value of the quantity struck off at the various mints has amounted to an aggregate of 3,600,000*l*. But they are now so unpopular from their smallness that they pour rapidly back into the hands of the Government collectors, and the Secretary of the Treasury has just ordered 600,000*l* worth to be remelted and converted into double eagles. It is expected, therefore, that no more will be issued. They are especially annoying, it is said, to the Custom House and Sub-Treasury officials, since, whenever any amounts are exchanged, they must be counted one by one, the facility with which they can be counterfeited and tampered with rendering it unsafe to determine their number by weight.

It is stated that, including the eastern slope of the Sierra Nevada, California has now a white population of about 700,000, nearly all acquired within twelve years. Before the close of the present century—that is within 40 years—this total, it is assumed, will have increased to 7,000,000. "With such a future," observes the *New York Times*, "the sooner we set about building the Pacific Railroad the better. It will be a second Erie Canal, not to a single State, but to the whole Union."

The Madras Railway Company have this week paid into the Bank of England, to the credit of the Secretary of State for India in Council, the sum of 112,995*l*, on account of and in anticipation of calls on the Fourth Extension shares of the Company.

In Vice-Chancellor Wood's Court, Mr Stuart and Mr Ball, the official managers of the London and Eastern Banking Corporation, made a call of 75*l* per share, payable by English contributors by the middle of December, while those abroad are allowed up to the end of February. The present call is made instead of that of 60*l* per share proposed in July last, when, it will be remembered, the question was adjourned. Upwards of 100,000*l* has been distributed by the managers up to the present time, and it is believed that the present call, with the unrealised assets and the arrears of the last call, will meet all the liabilities of the bank.

At a meeting of the Great Indian Peninsular Railway Company, the special report of Mr Franklin, the professional auditor, was received, and ordered to be printed, together with the Directors' report and accounts. A proposal that a committee of shareholders should be formed charged to settle the manner and scope of the audit was suspended upon a technical objection; but formal notice was given that it will be submitted at the next half-yearly meeting. In the interval, however, it is hoped that measures tending to remove all impediments to a thorough audit will be agreed upon.

Tenders for the 50,000*l* of Natal Six per Cent. Government Debentures cannot be received after noon on the 3rd November.

With reference to the market for American securities, Mr E. F. Satterthwaite reports as follows:—"Business to a fair extent has been transacted in London in American securities during the past week. United States Five per Cent. Bonds are more wanted, also Virginian Six per Cent., and Pennsylvania Five per Cent. In railroad shares we have to note a decline of 2 dols per share in Illinois Central and in Erie, consequent upon lower quotations from New York to the 20th inst. Railroad bonds remain steady. Michigan Central are more offering at a deline of 1 per cent. There is an improved demand for Detroit and Milwaukee bonds, and as high as 57 would be paid, but none are on the market."

The news from the Pacific is important for the holders of Equador bonds. The foreign debt of that Republic, amounting to 1,824,000*l*, is held chiefly in England and Holland, and the dividend payable upon it, under a compromise accepted in 1855, is 1 per cent. so long as the Customs receipts at Guayaquil do not exceed 400,000 dols per annum, gradually to increase to 6 per cent. by an appropriation of one-fourth of all the receipts that may occur over 400,000 dols. This arrangement was punctually fulfilled until the past year, when a General Franco, under pretence of the threats of an attack on the Republic of Peru, with the President of which country he is believed to have been acting in complicity, seized the funds which should have been appropriated to the foreign creditors. General Flores, who was President of the Republic several years ago, contrived about three months back to enter the country from Peru, and, having collected a small force, penetrated to Quito, where he was received with enthusiasm. From Quito he lost no time in marching down towards Guayaquil, and, having routed Franco, an immediate return to a condition of order and prosperity appears likely to be realised. Two half-yearly dividends are in arrear, but the commercial prospects of the State, the staple product of which is cocoa, were never better than at present; and it is to be hoped that the Committee of Spanish American Bondholders will promptly adopt all proper steps on behalf of their constituents.

There has been a meeting of the Spanish American bondholders, in connection with the negotiations with the Government of New Granada. It is understood that the terms spoken of by the Government agent are of a wretched character, amounting to about ¾ per cent. per annum interest upon the Active bonds. The matter is, however, still in quite an unsettled position.

We have received a communication from the Committee of Mexican Bondholders. It is the old story of anarchy and spoliation. All parties contending for mastery in Mexico, however they disagree in other respects, cordially unite in robbing the English bondholders. Church party or Constitutionalists, after levying a premium for the safe convoy of specie, first pocket the premium and then seize the convoy.

The only hope for the bondholders is, that both parties will be exterminated, and the United States seize on the territory. The last act of spoliation was the seizure of 1,200,000 dollars by the Constitutional General Degollado. The following is the reply of the Minister in Mexico to a remonstrance from our merchants :—

BRITISH LEGATION IN MEXICO.

Mexico, Sept. 26, 1860.

Gentlemen,—I beg to acknowledge your communication of the 22nd inst., with respect to the seizure of the conducta by the order and sanction of General Degollado.

I entirely concur in the view you have taken of this scandalous act, and it will be my duty to point out to Her Majesty's Government the necessity of personal responsibility and punishment in this, and in all similar cases of outrage.

In the absence of any report from Mr Glennie, I will merely add, in justice to the Constitutional Government at Vera Cruz, that I have received from Senor Emparan a peremptory order from Senor Juarez to General Degollado (which I have already transmitted) for the restoration of the money, and the formal assurance of the repayment of any sums that may be deficient, and of the strongest reprobation of General Degollado's conduct.—I am, &c.,

(Signed) GEORGE W. MATHEW.

Senor Juarez, however, does not hesitate to seize on the funds of the bondholders at Vera Cruz. There is no difference between them, and it is probable that European and we trust American Governments will now interfere.

The committee of management of the South Austrian, Lombardo-Venetian, and Central Italian Railway Company intimate to shareholders who have paid up their shares in full "that the interest at 5 per cent., to which according to the notice of the 28th March last they are entitled upon their anticipated payments, will be paid to them on and after the 1st of November. The first dividend being thus paid, all the other coupons will be stamped with the words '*action libere*,' and thus may be detached from the share."

According to a circular issued by Messrs Seymour, Peacock, and Co., the decision regarding the future contracts for the sale of Peruvian guano had not been finally arrived at up to the moment of the departure of the last mail. A Government notice, dated "Lima, September 26," announced that the tenders of certain houses had been accepted upon conditions which the parties tendering were to consider and decide upon on the third day. The answers would accordingly go in on the 28th of September, the day the mail left, but they had not been received when the packet sailed. The conditions in question, it is said, comprised important modifications in the terms of the agencies, and the general impression among mercantile circles in Lima was that they would not be agreed to. The contracts now running do not expire till December, 1861, and the contemplated arrangements will not take effect, therefore, until after that date.

At the 14th annual meeting of the Colonial Assurance Company, held at Edinburgh on Thursday, the report stated that the new assurances were 357,764*l*, yielding 13,523*l* in annual premiums; also that the total assurances in force amount to 2,439,582*l*, and that the annual revenue is 108,938*l*.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about 2 per mille premium, and the short exchange on London is 25.15 per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 425 per mark, and the short exchange on London is 13.4 per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 4-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

MAILS FOR SMYRNA, CONSTANTINOPLE, TREBIZONDE, &c., BY FRENCH MEDITERRANEAN PACKETS.—In consequence of an alteration which has been made in the arrangements of the French Mediterranean Packet Service, mails for Smyrna, the Dardanelles, Constantinople, and Trebizonde, intended to be forwarded by the French packets from Marseilles, will be made up in London, in future, on the evening of every Thursday only. The mails which have hitherto been despatched from London on every alternate Friday evening will no longer be sent.

MAILS FOR NAPLES AND THE ISLAND OF SICILY, VIA SARDINIA.—A line of mail packets has been established between Genoa and Naples, leaving Genoa for Naples at 11 p.m. on every Tuesday, Thursday, and Saturday, and Naples for Genoa on every Monday, Wednesday, and Friday, at 6 p.m. Letters addressed to Naples or Sicily may be registered at the desire of the senders. Upon all such letters the postage, and, in addition, a registration fee of sixpence, must be paid in advance. The postage upon newspapers and other printed papers must be paid in advance. All letters, &c., for Naples and Sicily will be forwarded in future by these packets, unless the address shall specify that they are to be otherwise forwarded.

LETTERS FOR NORWAY.—Information having been received that the packet communication between Denmark and Norway has ceased for the winter, the mails for Norway will be forwarded through Sweden until further notice. During the period of the conveyance of these mails via Sweden, the rate of postage upon letters addressed to Norway will be 1s 5d the half-ounce, and so on, according to the scale for charging inland letters.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The show of English wheat at Mark lane, to-day, was limited, and mostly in poor condition. Selected samples were taken off steadily, at fully Monday's prices; but other kinds met a dull sale, at almost nominal currencies. The transactions in foreign wheat were on a restricted scale, but at full quotations. Barley, malt, beans, peas, and flour realised previous rates, and oats commanded 6d to 1s per quarter more money. Fair average supplies of foreign produce have arrived this week, viz., 15,680 quarters of wheat; 5,010 barley; 14,330 oats; 1,710 sacks and 3,710 barrels of flour.

At Liverpool, this morning, produce generally was taken off steadily, at Tuesday's currency.

A very large business has been transacted in the Liverpo cotton market during the week, the total sales amounting to 111,500 bales, and include 54,500 bales to spinners, 47,000 bales to speculators, and 10,000 for export; the quotations for American are enhanced ¼d, those of Surats fully ⅛d per lb. The market to-day closes very firm and active; the sales are 15,000 bales. The American accounts received this week, reporting frost in the cotton regions and advancing prices, gave great firmness to holders in Liverpool, and produced a lively demand, and more particularly on the part of speculators, spinners not having operated to a proportionate extent. Unless the damage from the frost has been sufficient to curtail the crop very considerably, it would seem that in Liverpool prices have advanced to an unwarrantable extent.

The advices just at hand, from America, state that the effects of the late storm in the South have not been so serious as was at one time anticipated. The chief damage has been sustained by the quality, owing to the large quantity of cotton in the fields.

The public sales of tea held this week have been well attended by buyers. Assam parcels have realised an advance of from 1d to 2d per lb, and, in some instances, China qualities have slightly improved in value.

A full average business has been passing in all raw sugars, at 6d to 1s per cwt above last week's currency. Refined goods have risen 6d per cwt, with a good consumptive inquiry. Letters from the Havana, to the 8th ult., state that sugars were selling slowly, at from 21s 1d to 34s 10d per cwt, and that the weather for the crops was very favourable. The total exports from thence and Matanzas, since the 1st of January, amounted to 1,240,541 boxes, against 1,205,723 boxes last year.

The public sales of Ceylon coffee have gone off somewhat heavily, at a further reduction in prices. In the private market the transactions generally have been much restricted, at previous quotations.

The following statistical information is furnished by Messrs Trueman and Rouse:—

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Nine Months ending 30th September, 1859 and 1860.

There has been less activity in the demand for rice; nevertheless, the late improvement in value has been supported. The supply on offer is very moderate, when compared with last year.

The quarterly sales of cinnamon took place on Tuesday, and comprised 1,582 bales 32 half-bales 46 parcels 37 boxes Ceylon, and 46 cases Bombay. 243 bales were bought in, and the remainder realised the following prices:—Ceylon —242 bales first sort, good even quality, 2s to 2s 2d; middling, 1s 6d to 1s 10d; sea-damaged, 1s 7d to 1s 9d: 775 bales second sort, fine quill, bright, 1s 7d to 1s 8d; middling to good, 1s 5d to 1s 6d; ordinary to middling, 1s 2d to 1s 4d; sea-damaged, 1s to 1s 2d: 382 bales third sort, good, 1s 3d to 1s 4d; ordinary to middling, 10d to 1s 2d; sea-damaged, 1s to 1s 1d: 180 bales fourth, fifth, and unsorted, 9d to 1s; sea-damaged, 8d to 10d: broken ends, sound, 9d to 1s 2d; sea-damaged, 7d to 11d: pieces, thick coarse, not worked, 7d to 8d per lb. The sales went off with more animation than usual, and at higher prices than the July sales, the advance on first sort being 1d to 2d, second 1d

third 1d to 2d, fourth 2d to 4d per lb. The Bombay cassia kind was bought in at 40s per cwt.

The next quarterly public sales will take place on the 28th January, 1861.

We have no change to notice in the value of any kind of wool for the most part, the demand is restricted to small parcels. The next series of public sales will commence on Nov. 15. The imports since the close of last sales, together with the stock then remaining unsold, consist of the following:—Sydney, 3,566 bales; Port Philip, 4,340; Tasmania, 2,028; Adelaide, 1,162; Cape, 9,984: Swan River, 85; New Zealand, 4,152; total 35,317.

"Since the date of our last report," observes Messrs Greame and Co., of Liverpool, "the wool market generally has not exhibited much animation, and prices on the whole remain without any material alteration. The arrivals of East India here have been considerable, amounting to 5,373 bales, but as usual the bulk of them is held for our next public sales: there is, however, a good demand for most descriptions and a fair business done, chiefly in second-hand wools, at an advance on last auction rates. Egyptian, Syrian, &c., are not in very active request, and late current prices scarcely attainable. Oporto and Lisbon have been in fair demand, but the imports of the past month are unusually large, with prices in favour of buyers. Peruvian sheep's wool has been much inquired for, and late arrivals have been eagerly bought up at high rates, both washed and unwashed. English and Irish has ruled dull during the greater part of the month, consumers buying merely from hand to mouth to supply immediate wants, but prices remain very firm, and with little prospect of any reduction from present quotations. Scotch dull and without change."

The state of the tobacco trade last month is thus reported by Messrs Grant, Hodgson, and Co.:—

The market at the commencement of last month opened with increased firmness, and buyers who had previously placed no reliance on the unfavourable accounts respecting the crop were induced to operate to some extent at a fractional advance; subsequently a more active demand was experienced, resulting in sales of all sorts of 950 hhds, including parcels of Western strips of old imports at extreme quotations. Sampling of the new crop has made some progress, and hitherto the best class marks have turned out of extremely fine quality, and possessing a large portion of very colourly description. We are not aware of more than one parcel of new strips having been placed on the market, which was stated to be limited at 9d. Imports, 1,133 hhds. Deliveries, 1,050 hhds, against 965 hhds in the corresponding month of last year. Stock, 20 487 hhds, against 19,733 hhds in 1859, 13,776 in 1858, 10,353 hhds in 1857, 9,173 hhds in 1856, and 11,045 hhds in 1855.

The market for rum has continued quiet, on former terms. Brandy and grain spirits have maintained their previous value. Saltpetre has ruled heavy, at barely late rates.

Petersburg clean hemp has changed hands at 35*l*; but the market has become much less active. Valencia raisins move off freely, at 37s to 38s per cwt.

Linseed oil has realised 30s per cwt. Most other oils have commanded very full prices. The tallow market is active To-day, P.Y.C., on the spot, has realised 61s; all the year, 61s; December, 61s 6d; and Jan. to March, 61s 6d per cwt. Town tallow is 59s 6d net cash.

"The money market," observes the New York *Shipping List* of the 21st ult., "retains substantially the same features as noticed in our previous review—abundant supply, with a moderate demand at easy rates. Meanwhile, caution is the most noticeable characteristic of the general market, and with that characteristic we do not believe anybody but the reckless will be inclined to quarrel. As a significant sign of the times in this direction, it is worth mentioning the fact, that, on Wednesday, a circular was sent to each of the banks represented in the Clearing House, reminding them of the resolutions adopted March 16, 1858, against receiving any new account to allow interest on deposits, and in favour of carrying at least 20 per cent. of the net deposits in specie. The amount of commercial paper offering at Bank is very moderate, while on call the transactions are fewer than earlier in the week. The returning inactivity of the stock market lessens the demand from the brokers. We repeat our quotations:—

	Per cent. per annum.
Loans on call, stock securities	6½ to 7
Do. other good securities	7 8
Prime endorsed bills, 60 to 90 days	6½ 7
Do. 4 to 6 months	6½ 7½
First class single signatures	8 8½
Other good bills	9 10
Names less known	12 20

As usual at this advanced season of the year, the falling off in the demand for all kinds of dry goods has been a noticeable feature since our last report, though, when the various excitements of the week are taken into consideration, the aggregate business may be said to be fully as large as could reasonably be expected.

MARKETS IN THE MANUFACTURING DISTRICTS.

The accounts from the manufacturing districts, this week, are to the effect that rather more business has been done in goods for shipment, both to India and China, at full prices. The transactions on continental account have been tolerably numerous, and for home consumption, the demand is still healthy. In the general quotations, no change of moment has taken place, and there is no accumulation of supply in the warehouses. The demand for iron has been somewhat restricted, and coals have been less active, on rather easier terms.

MANCHESTER, Nov. 1.—This market has been chiefly influenced by the Liverpool cotton market, and the intelligence from India and China to-day has had no perceptible effect. Sellers of yarn have asked prices impossible of attainment, though, in a few cases, ⅛d to ¼d per lb has been paid over the rates of last week, especially on cop twist and weft for local consumption. Transactions in cloth have been to a smaller extent than those in yarns, inconsiderable as the latter have been, and the position of the manufacturer has certainly deteriorated. An advance of 1½d per piece over the reduced rates of last week has been cursorily obtained on China shirtings, but, as a rule, buyers hold aloof from extensive dealings.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

BRADFORD.—The makers of Coburgs are especially quiet, and very many looms must be standing. As regards wool, it may be said that there are a few more inquiries and a little more confidence, but only a limited business is still doing. We cannot report any improved inquiry for yarns. There is a little doing for export, but the home consumption is decreasing.

ROCHDALE.—There is no activity observable in the local wool trade; still staplers adhere to late quotations, and are likely to do so, seeing that they would be unable to replace stocks at anything below the prices they ask.

LEEDS.—We have no new feature to report of the state of our markets at the Cloth Halls. There was about the same demand for sealskins and heavy fancy goods, with some inquiry for the finer qualities of pilot cloths, but all other kinds were dull both on Saturday and Tuesday. Prices are steady, and the stocks of the kind of goods now in demand being low, the mills employed on such are still fully occupied.

HALIFAX.—The carpet and worsted trades here are rather slack. Noils and brokes for blanket and flannel manufactures continue in good request.

HUDDERSFIELD.—Our market has relapsed into the quiescent state which we have now so long been accustomed to. Prices are still well supported, and stocks generally more firmly held.

LEICESTER.—There continues to be a fair amount of business doing for the time of the year, and what is transacting is of a healthy character. The home trade is tolerably active, and is expected to continue so for some time to come. Wools are still firm, high prices being asked for superior sorts. Yarns are selling at low rates, and spinners continue well employed.

NOTTINGHAM.—The lace trade remains in a very inanimate condition, and very little has been done this week at the warehouses either in the home or foreign trade. In hosiery the improvement continues, and future prospects are more encouraging than they have been for some time past. The home buyers are purchasing more freely, and the foreign demand is increasing. Yarns are without alteration.

GLASGOW.—The demand for fleece wools has (if anything) rather improved. There is more disposition on the part of sellers

to meet the views of spinners, and more transactions have been entered into.

WOLVERHAMPTON.—The iron trade continues in the same inanimate state, the new French tariff having produced no effect whatever on the market. The market for pig iron in South Staffordshire shows no indications of returning animation, and the trade in manufactured iron is slow and less satisfactory. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*, and all other sorts in proportion. Welch bars, 5*l* 7s 6d to 5*l* 10s. The nominal price of rails in Wales is 5*l* 5s.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The demand has continued active at 6d to 1s advance, refining kinds attracting the greatest attention, and the market presents a firm appearance. Floating cargoes of Havana are more inquired after at the above improvement. There were 1,037 casks West India disposed of up to yesterday (Thursday), including the Barbadoes offered by auction, which went at 39s 6d to 45s for low soft to good yellow. The Netherland Trading Company's sale on the 22nd inst. will comprise 17,200 baskets. The total deliveries last week were 4,350 tons, making the increase for home consumption since the beginning of the year 13,750 tons. The stock is further reduced to 65,350 tons, against 77,600 tons in 1859 at the same date.

Mauritius.—6,235 bags in the public sales found buyers at full prices to 6d advance, chiefly grainy kinds at 40s 6d to 43s 6d. Business to some extent has been done by private contract.

Bengal.—3,833 bags chiefly sold as follows: Cossipore, 45s 6d to 46s; Gurpatta dats 41s 6d to 42s 6d; soft grainy yellow, 42s to 42s 6d. A large quantity of low brown has sold privately at 32s 6d to 35s per cwt.

Madras.—4,320 bags Aska sold at 45s to 49s for grainy yellow to white, and 3,700 bags of the lower qualities: native, 33s to 36s 6d; date kinds, 31s 6d to 33s 6d; dark grainy brown, 36s to 37s per cwt. Business has been done by private contract on the spot and to arrive at the above rates.

Manilla.—15,000 bags have changed hands: clayed at 39s to 39s 6d; unclayed, 38s 6d.

Java.—140 bags are reported sold at 40s per cwt.

Foreign.—Floating cargoes of Havana are dearer. Two have sold for the United Kingdom: No. 12½, 29s 6d; 11½, 28s 9d. A cargo of Cuba has been disposed of at 28s. On the spot, 11,000 boxes Havana are reported at 40s to 45s 9d. 1,000 bags low brown Siam at 35s. 730 bags 80 cases brown Bahia at 38s. 391 casks 145 barrels Porto Rico, by auction, sold steadily: brown, 36s 6d to 41s; yellow, low to good, 41s to 45s. 439 casks 177 barrels Cuba partly sold: low to fine yellow, 41s to 46s; brown, 39s 6d to 41s 6d. 1,104 boxes Havana: brown to good yellow, 40s to 44s 6d per cwt.

Refined.—The market has become much firmer, and prices show a recovery of 6d to 1s from the lowest quotations ruling last week. Common goods, 50s to 50s 6d; crushed, 49s to 49s 6d per cwt. The grocers have bought with increased freedom.

MOLASSES.—A steady business has been done in West India, chiefly common Antigua and St Kitt's, at 19s 6d per cwt. A floating cargo of Cuba muscovado is reported at 19s for this kingdom, or 19s 6d if for a near port, and one of clayed Cuba at 18s 6d per cwt.

COFFEE.—Very large supplies of plantation Ceylon have been brought forward, and the bulk has sold at irregular prices, some marks ruling rather in favour of the buyers. 2,366 casks 1,277 barrels and bags principally sold from 65s to 73s 6d for fine ordinary mixed pale to good middling, up to 92s for fine marks. 909 bags native: low to good, 60s to 64s 6d. A floating cargo of St Domingo is reported sold at 54s per cwt for the Mediterranean.

COCOA.—Business has been done in Grenada privately at 61s to 63s per cwt. No alteration is quoted in Trinidad.

RUM.—The market has been very firm. Sales of Demerara are reported at 2s to 2s 1d per gallon. Other kinds remain without alteration. The stock of West India is 24,450 puns, against 24,050 puns last year at the same period.

TEA.—Transactions have been chiefly confined to the public sales, which passed off well at full prices for China descriptions in most instances. Fine green was rather dearer. Assam tea of the Company's growth advanced 1d to 2d per lb. The China news has not exercised any influence upon the market. The catalogues contained 2,600 packages Assam, and 27,726 packages China tea. About half of the latter sold.

RICE continues very firm, and some kinds are again slightly dearer, particularly pinky Madras, which has realised 12s to 12s 3d for good. Soft grain descriptions cannot easily be obtained on previous terms: Bengal, 11s 9d to 15s; Necrancie Arracan, 11s cash. A floating cargo of Necrancie Arracan has sold at 12s. By auction, 2,204 bags Bengal partly sold at 12s per cwt for Dacca grain of old import.

IMPORTS and DELIVERIES of RICE to October 27, with STOCKS on hand.

Stock	6200	9700	8550	9150

SPICES.—1,000 cases Cochin ginger sold irregularly, but generally at the full valuations: wormy, low to good quality, 38s to 65s. 186 barrels Jamaica sold at 3*l* 4s to 4*l* 17s. 700 cases cassia lignea went off rather dearer, from 91s to 96s per cwt for third to first pile. 121 bags pimento realised 3⅜d to 3¼d. A few small lots nutmegs and mace sold the previous value. Pepper is unaltered. The quarterly cinnamon sales on Monday comprised 1,564 bales Ceylon, and went off with spirit at 1d to 2d per lb advance on the July currency: 1st sort, 1s 5d to 2s 2d; 2nd, 1s to 1s 7d; 3rd, 9d to 1s 4d; 4th, 7d to 11d per lb.

SALTPETRE.—Moderate transactions have taken place this week at about previous rates; the quotations for Bengal being 41s to 43s 6d per cwt, refraction 8 to 2 per cent.

IMPORTS and DELIVERIES of SALTPETRE to October 27, with STOCKS on hand.

	1860.	859.	1858.	1857.
	tons	tons	tons	tons

Delivered	10550	14600	11750	10250
Stock	4050	4030	2645	6700

COCHINEAL.—116 bags were sold at full rates to 1d advance: Honduras silvers, 3s 1d to 3s 5d; pasty, 2s 9d to 3s; Teneriffe silvers, 3s 1d; black, 3s 2d to 3s 4d; Mexican silvers, 2s 10d per lb.

SHELLAC.—The market has still an upward tendancy: fine D O orange may be quoted 12*l* 15s to 13*l* per cwt.

GUTTA PERCHA is in good demand, and genuine worth 1s 8d to 1s 10d per lb.

METALS.—Scarcely any change in prices has taken place this week, and the market is steady. Moderate sales have been made in manufactured iron. Scotch pig commands 52s for mixed numbers. A few contracts have been made in spelter, at 19*l* 15s to 19*l* 17s 6d per ton. Foreign tin has been quiet: Straits, 131s to 131s 6d per cwt.

HEMP.—A further advance has been paid for all kinds this week, and the market still shows an upward tendency. Petersburg clean commands 35*l*. Manilla is actively inquired after, with few sellers at 3*l* above the lowest rates lately accepted. Fine white sold by auction at 35*l* per ton.

JUTE is dearer, and several parcels have changed hands by private contract at enhanced quotations. 4,894 bales in public sale, on Wednesday, went off at 14*l* to 22*l* per ton for middling to fine.

LINSEED is firmer. Bombay, 61s 6d; Calcutta, 59s to 60s; the latter afloat, 58s to 58s 6d; Black Sea, 56s 6d to 57s per quarter.

OILS.—Rape is lower again, owing to forced sales: foreign refined, 43s to 44s; brown, 41s to 41s 6d. The linseed oil market is dull, at 29s 9d to 30s, with a large supply. Olive has been neglected. Fish oils remain dull, excepting pale seal, which commands 38*l* per tun. Owing to the advance in tallow, the market for cocoa-nut is firmer: Cochin, 53s 6d to 54s; Ceylon, 51s 6d to 52s. Fine palm commands 47s 6d per cwt.

TURPENTINE.—Rough is steady at 11s. A large business has been done in spirits: American, 34s 6d per cwt.

TALLOW.—In the middle of the week Y. C. suddenly advanced to 60s, since when there has been a very excited market. Yesterday the price reached 61s, and in the afternoon 62s per cwt was reported paid for spring delivery, being 2s 6d to 3s per cwt dearer.

PARTICULARS OF TALLOW.—Monday, October 29.

POSTSCRIPT.

FRIDAY EVENING.

SUGAR.—The market was firmer to-day. At the public sales, 5,911 bags Bengal, 2,515 bags grocery Madras, 1,235 bags native, and 670 bags Penang sold at previous rates to 6d advance for Gurpatta date, Bengal, and native Madras. 8,000 to 10,000 bags colonial descriptions changed hands by private contract. The week's business in West India amounts to 1,290 hhds.

COFFEE.—540 casks 530 barrels and bags plantation Ceylon went off at about previous rates. 1,260 bags native good ordinary partly sold at 62s 6d. 128 half-bales good Malabar, 66s 6d per cwt.

COCOA.—130 bags Bahia part sold at 58s to 59s. 202 bags Grenada went at 63s to 64s, and 50 bags Trinadad bought in at 68s to 70s per cwt.

TEA.—The sales concluded to-day, when 1,620 packages sold without further material alteration in value.

SPICES.—177 boxes limed nutmegs sold at 1s 1d to 2s, and 70 boxes brown at 1s 2d to 2s 5d. 267 bags Zanzibar cloves part sold at 3⅝d to 4d. 2,030 bags Singapore black pepper, 4d to 4¼d. 63 bags Singapore white, 5⅞d to 6d per lb. 454 boxes cassia lignea were bought in above the value.

SALTPETRE.—298 bags Bengal were taken in: refraction 10⅛ to 6¾, 41s to 42s 6d. 398 bags Bombay: refraction 53 to 29½, 38s to 39s 6d per cwt.

CUTCH sold at 25s 6d for fair quality, rather heated.

SPELTER.—A large business was done at 19*l* 15s to 20*l* per ton.

TALLOW.—Y.C. unaltered. Town advanced 1s 6d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been better supported this week, at a further advance for most descriptions of goods. Low lumps are held for 50s 6d. About 500 tons Dutch crushed have been sold this week for delivery this and next month, f.o.b. in Holland, at 32s 6d, 32s 7d, and 32s 9d of V.O., N.S.R. No. 3, B. & H. No. 1, and A.S.R. No. 2.

GREEN FRUIT.—A steady demand for all kinds, especially for black Spanish nuts, a parcel of which, sold by Keeling and Hunt, at public sale, went at a further reduction of price, and led to buyers taking stock. Lemons of all kinds support the advanced price obtained of late, and supplies of new Messina are daily expected. Almeria grapes, of good quality, bring a high figure, the crop of Hamburg being a failure this season.

DRY FRUIT.—The market generally has been quiet during the week in currants, but such business as has been transacted has been in fine sorts, which daily prove to be scarcer. Full prices have been refused for large parcels. In common new, further sales have been made at 25s to 26s. A parcel of 100 tons of fine Vostizza new was offered without reserve at auction, and sold at 31s to 32s, chiefly to trade. Advices from

Patras show that nearly all the remaining stock had been bought up, at an advance. In raisins, little has been done. Valencias are slow of sale, at 38s; a sale has been made at 37s afloat; but arrivals are very scanty, and buyers shy. A lot of new black Smyrnas sold at 25s. Sultanas have further advanced, and sales are reported at 54s: 52s refused for fair fruit. Figs also show a small improvement, specially in finer sorts of Turkey, which are sought after at 80s to 90s for layers. The trade have hardly turned their attention yet to this article. Muscatels and other fruits are of very small sale as yet, but prices are more moderate, and when better selections are on the market a good trade will be done.

ENGLISH WOOL.—Where sales are pressed lower prices are submitted to.

COLONIAL WOOL.—The public sales will commence on the 15th instant; the total quantity that will be offered will probably be only about 40,000 bales. The market remains quite firm.

FLAX market firm.

HEMP.—We have again to report a firmer market, a large business having been done up to the price quoted of 35*l* per ton.

COTTON.—Sales of cotton wool, from Friday, 26th October, to Thursday, 1st November inclusive:—1,800 bales Surat, 4¼d and 4⅜d for fair Compta; 4⅝d to 4¾d for middling fair to fair old Dhollera; 5⅛d for good fair new Dhollera; 4¾d to 5d for fair to good fair new Oomrawattee; and 5¼d for good fair new Broach; 300 bales Madras, 5d to 5⅛d for fair Tinnivelly; 2,600 bales Madras, 4⅞d to 4¾d for middling fair to good fair Western. The market opened steadily, and full prices were obtained, but on receipt of the American news, bringing accounts of frost and reduced estimates of the crop, the demand became very active, and consideriog the small quantity of cotton offering, a good business has been done at an advance of ⅛d to ¼d per lb on most descriptions. 262 bales Tinnivelly are advertised for public sale on Thursday the 8th inst. Market very good. Sales to day: 350 bales good fair Broach, 5⅜d; 150 Tinnivelly, 4⅞d for middling fair.

SILK.—The market quiet; the unexpectedly large settlements inducing people to abstain from buying until the letters by the mail are delivered.

TOBACCO.—The market has shown a decided improvement, and importers have declined making sales, unless at outside quotations. Business has been transacted to some extent, chiefly in tobacco of old imports.

TIMBER.—In the wood market there is not much business doing. At public sale, the past prices are feebly maintained, while the importers are crying out for higher prices commensurate with the rise in the rate of freight, both from Canada and from the Baltic ports. For ship-building timber there is rather more inquiry. For staves there is less; at the cooperages work is slack. In the consumption of building wood there is steady progress without evidence of speculative building, or any very heavy contract works being in hand.

LEATHER AND HIDES.—A fair amount of business has been doing in leather during the past week, at about previous rates. The supply on Tuesday at Leadenhall was not very large, and we cannot report a large trade. The demand has greatly fallen off for light butts, as well as for shaved dressing hides, whilst at the same time the inquiries were many for heavy and prime dressing hides of 35 lbs and upwards, which were scarce. Not any public sales of foreign goods have been held this week, but by private contract there have been sold a few hundreds of light River Plate hides at 6¼d to 6⅝d.

METALS.—The week has been very bare of transactions in our market. Copper is in but small demand, whilst the prices being paid for ores are higher. Iron is materially improved in demand for Welsh brands, and in other respects generally unchanged. Tin continues to maintain high rates, and to find a steady sale. Spelter is unchanged in prices, with but little business doing. Lead keeps in moderate demand. Tin plates still depressed.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	62	3
Fat by ditto	3	3
Yellow Russian	63	0
Melted stuff	44	6
Rough ditto	27	0
Greaves	20	0
Good drogs	7	0

Imports this week 4,289 casks.

PROVISIONS.

The bacon market is at present in a dull state; the price same as last week. A fair demand for Friesland at 114s.

METROPOLITAN CATTLE MARKET.

THURSDAY, Nov. 1.—The supply of beasts in to-day's market was limited, and all breeds moved off steadily at fully Monday's currency. We were scantily supplied with sheep, for which the inquiry ruled firm at full quotations. The best old Downs realised quite 5s 2d per 8 lbs. The quality of both beasts and sheep was inferior. The show of both English and foreign calves was limited, and the veal trade was active, at an improvement in value at from 2d to 4d per 8 lbs. The top figure was 5s per 8 lbs.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	6	2	8	Prime Southdown sheep	4	10	5	2
Second quality ditto	2	10	3	2	Large coarse calves	4	0	4	6
Prime large oxen	3	4	4	0	Prime small ditto	4	8	5	0
Prime Scots, &c.	4	2	4	6	Large hogs	4	0	4	6
Coarse and inferior sheep	3	0	3	4	Small porkers	4	8	5	0
Second quality ditto	3	6	3	10	Suckling calves...each	12	0	23	0
Prime coarse-woolled do.	4	0	4	3	Quarter old store pigs	22	0	29	0

Total supply—Beasts, 852; sheep and lambs, 3,800; calves, 180; pigs, 300.
Foreign supply—Beasts, 440; sheep, 990; calves, 150.

NEWGATE AND LEADENHALL.

FRIDAY, Nov. 2.—The supplies of each kind of meat are seasonably good. Generally speaking, the demand rules steady, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	2	2	4	Mutton, inferior	3	0	3	4
Middling ditto	2	6	3	0	— middling	3	6	3	10
Prime large	3	2	5	6	— prime	4	0	4	2
Prime small	3	8	4	0	Large pork	3	10	4	6
Veal	3	10	4	6	Small pork	4	8	5	2

HOP MARKET.

BOROUGH, Monday, Oct. 29.—We have no alteration to report in our market, which remains heavy for every description but the finest samples of new growth. Our currency is as follows:—Mid and East Kents, 18*l*, 22*l*, 28*l*; Weald of Kents, 14*l*, 17*l*, 21*l*; Sussex, 10*l*, 14*l*, 16*l*; Yearlings, 7*l*, 9*l* 9s, 12*l* 12s. The duty has advanced to 45,000*l*.

FRIDAY, Nov. 2.—The market is in a very quiet state, both buyers and sellers anxiously waiting the officially declared duty.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Oct. 29.—During the past week the arrivals coastwise and by rail have been limited, but the weather being very mild for the season, trade was very heavy, and towards the end of the week prices had a downward tendency. The following are this day's quotations:—Yorkshire Regents, 120s to 140s; Lincolnshire ditto, 110s to 130s; Dunbar ditto, 130s to 150s; Perth, Forfar, and Fifeshire ditto, 120s to 130s; ditto Rocks, 110s to 120s; French whites, 110s to 120s per ton.

THURSDAY, Nov. 1.—Fair supplies of home produce have come to hand this week, coastwise and by rail, and a good many French. Trade in consequence is less active, and prices lower. The present quotations are as follows:—York Regents, from 120s to 130s; Kent and Essex ditto, from 100s to 140s; Scotch ditto, from 110s to 120s; Dunbars, 120s to 140s; French, 110s to 120s; Belgian, 105s to 115s; Prussian, 110s to 120s per ton.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 2.—There has been a fair inquiry this week, chiefly for immediate consumption. We have no material change in prices to report, and stocks are by no means excessive.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 2.—Corn market fairly attended. Good consumptive demand for wheat, at extreme rates of Tuesday. Flour, fair sale, at late rates. Indian corn, good business doing at 39s 6d to 40s for Galatz, and mixed beans, oats, oatmeal, and barley unchanged.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 2.—The demand for manufactured iron continues to a moderate extent, at about previous rates. In Scotch pig iron there has been little or nothing during the past week, and prices remain nominally without alteration. Some transactions in copper have taken place at a slight reduction in price, while the trade generally remains pretty firm. Little to notice in other metals.

The Gazette.

TUESDAY, Oct. 30.

BANKRUPTS.

W. Harman, Emmett street, Poplar, outfitter.
J. Hollings, Charles street, Hampstead road, cowkeeper.
R. C. Davies and J. N. Troughton, Shoreditch, bankers.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Oct. 20 amounted to 535,060*l*, and for the corresponding week of last year to 516,240*l*, showing an increase of 18,820*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 229,743*l*, and for the corresponding week of 1859 to 230,605*l*, showing a decrease of 862*l*.

GREAT INDIAN PENINSULAR.—The directors of this company state in their report that satisfactory progress in the prosecution of the company's enterprise was effected during the half-year ending the 30th of June last. At the beginning of the half-year 245 miles of railway were open for traffic. This length of line was increased in the course of the half-year to 297½ miles. On comparing the receipts, on an average of 279 miles, during the past half-year, with those on an average of 194¾ miles in the corresponding half of 1859, it appears that the receipts for passengers amounted to 40,041*l*, against 32,369*l*; for merchandise 53,352*l*, against 48,607*l*; total receipts, 101,250*l*, against 87,607*l*. The average receipts per mile were 363*l*, against 450*l*. The total expenditure was 60,091*l*, against 39,091*l*, or 215*l* per mile against 201*l* per mile and the net profit 41,159*l*, or 148*l* per mile, against 48,515*l*, or 249*l* per mile in the corresponding period of 1859.

LONDON, CHATHAM, AND DOVER RAILWAY.—That portion of the main line which is called the "Western Extension," was formally opened on Wednesday by the Messrs Peto, Betts, and Crompton, the contractors. The line, which is considered one of the heaviest around London, with the exception of the Great Northern, was constructed under the superintendence of Mr Charles Watson, chief agent for Messrs Peto, Betts, and Co., and the work done is said to be of the highest character. The works have been completed thus far within the space of two years from the date of the commencement. For a time the traffic of the London, Chatham, and Dover Railway is to be carried from the Victoria Station, Westminster, along the Crystal Palace line, which belongs to the Brighton Company, and thence to Beckenham, on the Mid Kent line, and so on to Bickley. The Western Extension line, which was formally opened on Wednesday, will be opened in a few days for public traffic.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Oct. 29.—The railway market was firmer to-day, although the highest quotations were not maintained. In the colonial market, Grand Trunk of Canada securities declined. The ordinary stock closed at 23 to ½; first preference bonds, 73 to 77; and ordinary debentures, 43 to 47. Great Western shares were dull at 13½ to ⅝. In foreign descriptions, South Austrian and Lombardo-Venetian improved to to ¾ dis. No material change occurred in American railway securities. Mines were inactive, and in some cases showed a decline. In joint stock banks, Chartered Mercantile of India were firmer. In miscellaneous descriptions, Canada Land improved.

TUESDAY, Oct. 30.—In the railway market to-day there was scarcely any business except in connection with the settlement now in progress. In the colonial market the ordinary stock of the Grand Trunk of Canada slightly recovered, the final quotation for the 15th of November being 23½ to 24. The preference and ordinary bonds were without change at 74 to 76 and 43 to 47. Great Western shares declined to 13¼ to ⅛. The only important alteration in foreign railways was an improvement in Bahia to 1¼ to 1 dis. New South Wales Government bonds were firmer. American securities were heavy, especially the shares of the Illinois Central and New York and Erie, both of which showed a decline. Mines were also depressed. There was no material change in joint stock banks. In miscellaneous descriptions, Royal Mail Steam shares were quoted lower.

WEDNESDAY, Oct. 31.—The railway market to-day was rather dull, and most of the leading stocks closed at a slight decline. Great Northern and South-Eastern were especially heavy. In the colonial market, Grand Trunk stock declined to 22½ to 23¼, while the preference and ordinary bonds were firmer at 75 to 77 and 44 to 47. East Indian stock was ¼ per cent. higher. In foreign descriptions, Bahia, San Paulo, and Lombardo-Venetian improved. American railway securities left off about the same as yesterday. Mines were inactive, but occasionally presented a slight rise. Joint stock banks showed no change of importance. In miscellaneous securities, Peninsular and Oriental shares advanced. Canadian Government debentures were quoted higher. Victoria debentures, new, closed at 106 to ¼; Canadian Five per Cents., 103¾.

FRIDAY, Nov. 2.—The railway share market was very firm, with a drooping tendency. Several of the principal stocks, including Lancashire and Yorkshire, Midland, and London and North-Western, sustained a reduction varying from ¼ to ½ per cent. South-Eastern, however, is steady at 84¾ to 85.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen at the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

ALLSOPP'S PALE OR BITTER ALE.

—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments.—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross.
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

DR DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL.

Prescribed by the most Eminent Medical Men as the safest, speediest, and most effectual remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners, prove that a half-pint of Dr de Jongh's Oil is far more efficacious than a quart of any other kind. Hence, as it is incomparably the best, so it is likewise unquestionably the cheapest.

Palatableness, speedy efficacy, safety, and economy, unitedly recommend this unrivalled preparation to invalids. NO OTHER OIL CAN POSSIBLY PRODUCE THE SAME BENEFICIAL RESULTS.

Opinion of Sir HENRY MARSH, Bart., M.D., T.C.D., Physician in Ordinary to the Queen, in Ireland; President of the Royal College of Physicians in Ireland, Visiting Physician to Steevens' Hospital; Consulting Physician to the City of Dublin, St. Vincent, and Rotunda Hospitals, &c., &c.

"I have frequently prescribed Dr de Jongh's Light Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value.

"Merrion Square, Dublin,
"September 0, 1860."

Sold ONLY in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s., capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNEES,
ANSAR, HARFORD, and CO., 77, STRAND, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

FIRST-CLASS EDUCATION,

at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical (preparatory to Harrow and Eton) and commercial school, it is also highly recommended for a thorough French education, and as preferable to going abroad. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. No corporal punishment. Terms inclusive, and vary according to age and requirements, from £40, £50, to £60 per annum. Not one case of illness has occurred since the school has been established.—Address, stating age and requirements, Professor Vellbre (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming, but optional to parents.

BRITISH SYRIAN RELIEF FUND.

PRESIDENT—Lord Stratford de Redcliffe.
CHAIRMAN OF THE EXECUTIVE COMMITTEE—Sir Moses Montefiore, Bart

The Contributions of the benevolent throughout the United Kingdom are most earnestly solicited on behalf of the perishing multitudes, surviving victims of the late frightful massacres in Syria. The most recent official accounts received by the Committee are perfectly appalling, and unless the British public exert, in this emergency, their wonted beneficence, by contributing through the Committee money, and such material relief as must be required by the homeless, the naked, the starving, and the sick, the mortality among the sufferers, as winter approaches, will be frightfully extensive.

Donations of provisions, clothing, medicine, tents, &c., will be sent out free of expense, if addressed to the "British Syrian Relief Committee," at the Victoria Dock Warehouse, Steel yard, Upper Thames street, E. C.; or 4 York buildings, Liverpool Persons sending goods are requested to inform by letter, the Secretary, Mr Cyrus Edmonds, 12 York buildings, Adelphi.

Offers to undertake needlework will be thankfully accepted, and the cut out Syrian patterns or materials may be obtained from the Ladies' Committee, by application to their Honorary Secretary, 12 York buildings, Adelphi, London.

The following Bankers receive Subscriptions to the Fund:—Messrs Barclay, Bevan, and Co.; Glyn and Co.; Roberts, Curtis, and Co.; Smith, Payne, and Co.; Williams, Deacon, and Co.; Roberts, Lubbock, and Co.; Dimsdale, Drewett, and Co.; Heywood, Kennard, and Co.; Ransom, Bouverie, and Co.; Child and Co.; Praed and Co.; Drummond and Co.; Coutts and Co.; Cocks and Co.; Call, Marten, and Co.; and the following Banking Companies: The London and Westminster Bank, Lothbury, and all its branches; Union Bank; London Joint Stock Bank; London and County Bank; the National Bank of Ireland, and all its branches; the Ottoman Bank; the National Bank of Scotland, and all its branches; and Jones Lloyd and Co.

SIR C. E EARDLEY, BART., } Hon. Secretaries.
SIR JAS. FERGUSSON, BART., }
J. P. KENNARD, ESQ., 4 Lombard street, Treasurer.
CYRUS R. EDMONDS, Secretary.
12 York buildings, Adelphi, W. C.

POMMERY'S CHAMPAGNE.—

Extra Sorts Creaming and Sparkling.—Agents in London, A. Kniep and Co., 22 Basinghall street; Paris, 18 Boulevart des Italiens.

BASS'S EAST INDIA PALE ALE.—

The October brewings are arriving from Burton in 18 gallon casks. The ale in bottle is also in good condition.—BERRY, BROS., and CO., 3 St James's street, S W.

LE SOMMIER ELASTIQUE PORTATIF.

HEAL AND SON

have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome.

The "SOMMIER ELASTIQUE PORTATIF" is made in three separate parts, and when joined together has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse hair, it cannot harbour moth, to which the usual Spring Mattress is very liable; the prices, also, are much below those of the best Spring Mattresses, viz:—

	£ s d
3 ft wide by 6 ft 4 in. long	2 5 0
3 ft 6 in. — —	2 10 0
4 ft — —	2 15 0
4 ft 6 in. — —	3 0 0
5 ft — —	3 5 0
5 ft 6 in. — —	3 10 0

The "SOMMIER ELASTIQUE PORTATIF," therefore, combines the advantages of elasticity, durability, cleanliness, portability, and cheapness.

An Illustrated Catalogue of Bedsteads, Bedding, and Bed-Room Furniture sent free by post on application.

HEAL and SON, 196 Tottenham court road, W.

SPECIAL ANNOUNCEMENT.

ON TUESDAY, THE 6TH OF

NOVEMBER, the NEW BRANCH ESTABLISHMENT of E. MOSES and SON, at the CORNER OF TOTTENHAM COURT ROAD and EUSTON ROAD, will be opened with an immense and unrivalled Stock of READY-MADE CLOTHING, HATS, HOSIERY, BOOTS and SHOES, &c., for Adults and Juveniles of all Classes

E. MOSES and SON have endeavoured to render this Establishment worthy, in every respect, of the proud eminence they have attained among the Wholesale and Retail Houses of the Metropolis; and, while tendering their warmest thanks to the Public for the generous support and encouragement hitherto afforded them, they respectfully solicit a continuance of the same.

Every Department has been furnished with an entirely New Stock of the most Fashionable and Seasonable Goods.

The BESPOKE TAILORING DEPARTMENT has been supplied with a splendid Assortment of the latest Home and Foreign Manufactures.

Cheapness combined with Durability of Material and Workmanship will continue to be the prominent characteristic of the House.

The Establishment may be Viewed at any time during Business Hours, without special invitation.

The Establishments are closed every Friday evening at sunset until Saturday sunset, when business is resumed not till 12 o'clock.

VOLUNTEER PIPE.—

RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES,

Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers

NO MORE PILLS OR ANY

other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.

DR BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.

Certificate No. 36,418.—We find it the safest remedy Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurer Dr Shorland; Dr Campbell.

We extract a few out of 56,000 cures:—

Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.

Similar testimonials from 56,000 patients who can be referred to.

The food is sold in canisters, 1 lb, 2s 9d; 2 lbs. 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

HOLLOWAY'S PILLS.—

Confusion and Pain of the Head.—These premonitory signs of coming illness should have early attention, or palpitations and uneasy feelings about the heart will succeed, and be followed in their turn by more serious symptoms. Holloway's Pills display their most constant and happiest effects in dispelling these disagreeable feelings, clearing the furred tongue, rousing the torpid bowels, and removing the languor and flatulency so oppressive after taking food. No medicine is so well calculated to restore the digestive functions or so potent to soothe the nervous system. The dyspeptic, by taking these purifying Pills, will substitute ease for pain, and once more renew vigour in the wasting body, and rekindle a healthy elasticity in the despondent or exhausted mind.

DR BUCHAN'S PATENT

SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 22 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Prout, 229 Strand, &c., &c.

Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

A BOON TO NERVOUS

SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Free for Six Stamps.

ENGLISH, FRENCH, AND

AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure. Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A, 27 Alfred place, Bedford square, London, W.C.

ROBIN HOOD.—

WOTHERSPOON and CO., Glasgow and London.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchel	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND

CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By Dr J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion

MR CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.

Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

Just published, 71st thousand, price 1s, post free for 13 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.

DR LA'MERT ON SPERMA-

TORRHŒA; an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.

CONTENTS.

SECTION I.—The Physiology of the Generative Organs.

SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.

SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.

SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.

SECTION V.—Spermatorrhœa, or Chronic Impotence: its History, Causes, and Moral Consequences—The Sterility of Age.

DR LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.

37 Bedford square, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hondred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is caodidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally coodemns Zinc Paiot altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

TO VOLUNTEERS AND THE PUBLIC.
WILSON'S BREECH-LOADING RIFLE.
Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.
This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—
1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.
2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.
3rd It is easy to manufacture, and can be made entirely by machinery.
4th. It is so constructed that accident from careless loading or otherwise is impossible.
5th. The breech-plug can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.
6th. The action is always in good order, requiring no adjustment in use.
7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.
8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.
Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.
A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

SAUCES.—CONNOISEURS
have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper.
Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

CROSSE AND BLACKWELL,
Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

S. W. SILVER AND CO.,
OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

66 Queen street, London, 23rd August, 1860.

MESSRS R. WOTHERSPOON and CO., 46 Danlop street, Glasgow,

DEAR SIRS,—I have, as requested, to-day visited the Royal Laundry, with reference to the advertisement of the Nottingham firm, who state that their starch has been used for many years in the Royal Laundry, and have been assured by Mr Thompson, the superintendent, that none but yourselves have any right to state that they supply starch to Her Majesty's Laundry, as no other starch is there used, nor has been used for some years, but the Glenfield Patent Starch. I have been further assured that your starch continues to give complete satisfaction, and that though trial has been made of samples of various starches, none of these have been found nearly equal in quality to the Glenfield.—I am, dear Sirs, your obedient servant, WM. BLACK.

The Political Economist.

The Memoir of the Right Honourable James Wilson, which has been announced, will be published in a Supplement to the ECONOMIST *of the 17th November. Owing to the necessity of communicating with India, it has not been found possible to fix an earlier date.*

LORD JOHN RUSSELL'S DESPATCH.

THE two recent despatches of our Foreign Secretary to our Minister at Turin have naturally created a great sensation both in the diplomatic and in the political world. It has been considered somewhat surprising, to say the least, that the same Minister should have written the letter of August 31 *and* the letter of October 27; and still more that a British Minister of mature years, unquestioned sagacity, and long official experience, should have written *either*. Statesmen who have filled high places and governed great countries have usually learned to be abstinent and cautious,—very careful in what they say, and very careful not, needlessly, to say anything at all. They are chary of taking up the pen. They seldom *volunteer* opinions or advice; they generally wait till questions are asked before they answer them; and when business, courtesy, or etiquette compels them to break silence, they are particularly on their guard against enunciating principles or maxims wider than required by the occasion, possessing an inconvenient range, and susceptible of unlooked-for applications. This reticence, wise and habitual in nearly all Ministers, is peculiarly prescribed, one would fancy, to the Secretary for Foreign Affairs by the nature of the special department over which he presides, and by the prospect of the Parliamentary and newspaper criticism to which every proceeding of his is sure to be exposed in a free and constitutional country. This customary reticence Lord John Russell has violated twice within two months; though he holds the seals of our Foreign Office, though he has sat in the House of Commons for nearly half a century, and has been a Cabinet Minister for at least a quarter. Has this departure from the usual practice been prudent or right? Have Lord John's despatches been wise, and are the principles laid down in them appropriate, defensible, and sound?

We confess we regard the proceedings of our Foreign Secretary with the gravest and strongest disapproval;—and we are free to express this opinion the more decidedly, and feel called upon so to express it, because in the cases at issue our sympathies and predilections coincide with Lord John's. As our readers are aware, we deprecated any attack upon Venetia quite as earnestly as the despatch of August 31;—and we justified the interposition of Garibaldi and Victor Emanuel quite as boldly as the despatch of October 27. Yet we have no hesitation in condemning both documents, as acts of official indiscretion, and the latter especially as one of the most injudicious missives ever isued from that office, or by that pen.

On the first despatch we made no comment at the time, and we shall pass it over without further comment now, because—though perhaps unnecessary altogether and certainly unnecessarily offensive in tone, and though disfigured by a menacing allusion to "England's interests in the Adriatic," which either meant nothing at all, or meant something irrelevant and indefensible—the remonstrance so urgently pressed upon Sardinia against any attack upon the Venetian Provinces of Austria was in itself judicious and not unnatural. There *was* talk about attacking Venice: Garibaldi had announced it as what he intended to do; Cavour had spoken of it as what he would do if he dared, and what he hoped to do ultimately; and it was doubtful whether the irrational vehemence of the Italians might not force on some premature enterprise in that direction. Lord John felt that such an enterprise would almost inevitably fail: that if it failed, it would ruin the cause of Italian unity; that if it succeeded, it would probably involve and would certainly risk a European war; and that in either case the position of England would become difficult and perplexing in the extreme. It was natural, therefore, that Lord John should feel excessively uneasy, and that, being excessively uneasy, he should write to say so. Possibly, too, it was not unnatural in such a case that he should write hastily and imprudently, and should say things that were better left unsaid. Certainly, if he had contemplated writing the despatch of October 27, he never would have written that of August 31,—or he would have worded it very differently.

None of the above considerations can be urged in extenuation of the latest of these documents. There was no need to write at all. The invasion of Naples by Victor Emanuel was a *fait accompli*. Approval or disapproval could not change the position of affairs. But the other Governments of Europe had sent to say that they thought Victor Emanuel very wrong; so Lord John sent to say that he thought him quite right;—and proceeded to give his reasons for thinking so. A very few reflections will suffice to show the singular indiscretion, and as we think the essential unsoundness, of this unexampled despatch. It must be remembered that the great principle for which England has contended during the whole of this Italian struggle has been NON-INTERVENTION, and the great gain which we considered international law and international morality had secured was the establishment of this principle. "Let the Italians (we said) decide for "themselves. It is for the people of Tuscany, of Romagna, "of Parma, of Sicily, to discard their Sovereigns and annex "themselves to Piedmont if they wish,—and if they can. "It is not for France, or Austria, or England to interfere. "Let there be no interposition between Sovereigns and sub-"jects, *on any side*." We argued, exherted, hinted, half menaced;—and at last carried our point. We agreed that

we, who love liberty, should not interfere to aid Italian freedom; and that Austria, which loves despotism, should not interfere to prevent Italian freedom; and we induced France to stand by us (the Pope and his patrimony apart) in sanctioning and patronising this *bi-lateral* arrangement—the principle of which, as we have constantly argued, is irrefragably sound. This point gained, this position secured, and this being the situation of affairs, rumours arise that Sardinia is designing to help the Venetians (who *wish to shake off* their tyrant) and the Neapolitans (who *have nearly shaken off* theirs). Lord John, in much alarm, and in some temper, and strong in his great doctrine of non-intervention, sends a peremptory warning to Sardinia that she must do nothing of the kind, either in the North of Italy or in the South; that she has promised and must keep her word; that she must let both Naples and Venice alone.

But the King of Naples, almost conquered and almost expelled, makes a stand on his last stronghold; and it appears possible that without Piedmontese aid his subjects may not succeed in discarding him, and probable that they will only succeed at the cost of some time and trouble and of much blood. Accordingly, Victor Emanuel is called in by the Neapolitan patriots; and he—an independent Sovereign, diplomatically speaking at peace and in amity with Francis II., and with his Ambassador (we believe) still residing at Turin—responds to the call, and marches in his army, without any declaration of war, to give his hard-pressed brother the *coup de grace*. We told our readers three weeks ago why *we* were prepared to defend this unexampled proceeding. Lord John also tells the world *his* reasons:—but they are very different ones. He puts aside, at once and expressly, all that Count Cavour urged and all that we pleaded in justification of the step, as minor, if not irrelevant considerations; and, sheltering himself under the authority of a very questionably sound and very unquestionably pedantic quotation from Vattel, lays down the following propositions, in the broadest form and in the clearest language.

1. The Roman and Neapolitan people were of opinion that their Governments were bad and oppressive, and that only union with the rest of Italy would secure them liberty and justice.

2. The said people, as well as the other Italians, must be allowed to be the best judges of this question, as well as of their own affairs generally.

3. They—thinking their Government bad, and being better able than any one else to decide whether it is so or not—had an inalienable right to call in the King of Piedmont to their assistance, and he had an equal right to respond to their call; because Vattel lays it down that "when a people, "*for good reasons*, take up arms against an oppressor, it is but "an act of justice and generosity to assist brave men in de-"fence of their liberties."

Now, we shall not, and we need not, express any opinion as to the abstract morality of this dictum of a Dutch writer:—it is sufficient to establish the fact that the Minister who directs the foreign policy of Great Britain, and expounds its principles, has laid down, *first*, that when a people is *really* misgoverned and oppressed, they are entitled to ask assistance and liberation from a foreign Potentate, and that it is just and right in him to grant that succour;—and, *secondly*, that the people and the people only are to judge *whether* they are really misgoverned and oppressed. These are now, unless Lord John be disavowed and ousted, British doctrines—(whatever may be our private notions as to their soundness or unsoundness);—and being such, it will be obviously impossible to avoid admitting the following practical conclusions from them and applications of them, whenever and wherever the power to put them in practice shall be found:—(1) The people of Venice may at any time call in Victor Emanuel, or Louis Napoleon or Queen Victoria, to assist them in throwing off the Austrian rule; and it will be right to listen to that call; for as to *their* oppression, and as to their being the best judges of it, no doubt can exist in any mind. Yet this was the precise contingency against which Lord John thundered in the name of England two months ago. (2) Whenever the Irish, or the Ionian Islanders, or the Hindoos, or the Maltese, or the Canadians, or any considerable portion of them, choose to pronounce themselves misgoverned and oppressed, they may rightfully ask and obtain French, or Austrian, or American assistance, to throw off the "hated yoke" of Great Britain;—and our own doctrine will preclude us from complaining. (3) In any case of insurrection or civil war between Sovereigns and subjects, if the subjects are turbulent and irrational—of which the Sovereigns must be the best judge, it being "their own affair,"—the Sovereigns are entitled to call in the help of friendly Potentates, in order to maintain law and order;—for so logical a mind as Lord John's cannot intend to argue that of two parties in a conflict one is to be judge in his own case and not the other, or that one may lawfully be succoured from without and not the other. If Lord John's doctrines are to be adopted, the principle of non-intervention is gone for ever;—or (what is practically and logically the same thing) foreign intervention is right in a good cause, and wrong in a bad one:—*Anglicé*, right on behalf of subjects and freedom—wrong on behalf of princes and despotism; *Austriacé*, right on behalf of authority, order, and legitimate rulers—wrong on behalf of insurrection, discontent, anarchy, and rebellious subjects. Does not the despatch fully go this length? And if so, are we not warranted in deploring it as one of the most weak, rash, and dangerous documents that ever bore an official seal?—and none the less so because issued in support of a cause which we have at heart more than any other? It is scarcely too much to say that it lays down principles which will justify anything that any body wishes to do—and it lays them down in the name of the greatest and most moral Power in Christendom.

FURTHER STEPS IN FRANCE TOWARDS FREE TRADE.

It is becoming more and more clear that the French Emperor wishes to make the Treaty of Commerce with England a reality, and that he will be able to make it a reality. On commercial subjects he and his advisers are, we lament to say, wiser not only than the producing classes of France (for that would not be surprising), but also than the French Liberals. It is nothing new in the world that any producer should see reasons—excellent, unanswerable reasons—why other producers should be prohibited from competing with him; so it will be while human nature remains what it has always as yet been. But what is remarkable—what is lamentable is, that the French Emperor and his advisers should be wiser on industrial subjects than the Liberal party who oppose him. So, however, it is. There have been unmistakeable signs that many of the most influential of that party object to the treaty with us not only because it is the Emperor's treaty, but also because it is a Free Trade treaty. Although they represent the cultivated classes—although they are in daily opposition to the Imperial Government, which is based on the sluggish confidence of the uneducated many, on the very ground that it is so based,—although they claim specially, and as it were officially, to be the educated minority whose right it is to govern, and whose duty it is to govern wisely,—they have, nevertheless, been too ready on the question of Free Trade—on principles universally accepted by men of their culture throughout Europe—to ally themselves with natural but interested prejudices, with efforts which were inexcusable in them, though quite excusable in all others. The Liberal party must meet their reward. Gladly as we would have received free trade from them,—much as we should have preferred receiving it from them to receiving it from Louis Napoleon,—*in fact*, we and the world have him to thank for it; we have only to pardon them for opposing it and for sneering at it.

The evidence that the Emperor of the French is in earnest in his Free Trade policy is conclusive. Not only is the tendency of his influence gradually to introduce Free Trade, but every new act of his administration in these matters accelerates the rate at which the reformation moves. This of course is the true test of his sincerity. He is too wise to carry things with a very high hand against a nation so inured to false notions on this subject as the French. What he can wisely effect is necessarily gradual;—but seeing that the elaborate caution with which the first steps were taken is exchanged for a more distinct and progressive policy, as soon as it seems safe to hasten the change, we may fairly rely on the force as well as the sincerity of the Emperor's purpose. Now, since the conclusion of the Commercial Treaty, several important

eps have been taken, which do not form any part of ie stipulations of the treaty itself. First, three or four ionths ago, the Emperor admitted, by an Imperial decree, nglish and American corn ships to French ports at the same harges as the French ships. Within the last few days, this egulation as to corn ships has been extended to the French olony of Martinique; and it is stated that this policy, hich amounts to a gradual repeal of the French Navigation aws so far as regards vessels freighted with corn, is likely o be extended until it includes all the colonial depenencies of France. This movement on the part of the rench Government shows that the Emperor of the rench has grasped the true principles of Free Trade far etter than that large class of our own shipowners who were o recently clamouring for reciprocity. The French mertile marine has the apparent advantage of competing on ery unequal terms in the carrying trade with England, and he Emperor is gradually renouncing that apparent advanage, knowing it to be really prejudicial to French commerce. nd the facts of the case prove him to be right. From the recent eport of the Committee on Merchant Shipping we extract the ollowing table, affording a remarkable illustration of the neffectual nature of the premium given to French shipping y the French Navigation Laws :—

he Tonnage of French and Foreign Shipping Entered and Cleared at Ports in France from 1849—1858 (with Cargoes and in Ballast).

	French Tonnage.	Foreign Tonnage.	Total Tonnage.
1849	1,901,777 ..... 45.8 per cent.	2,247,298 ..... 54.2 per cent.	4,149,075
1850	1,891,512	2,719,207	4,610,719
1851	1,974,968	3,012,695	4,987,663
1852	2,054,630	3,286,642	5,341,272
1853	2,313,700	3,560,256	5,873,956
1854	2,535,683	3,513,913	6,049,596
1855	2,697,901	4,393,252	7,091,153
1856	3,107,539	5,426,976	8,534,515
1857	3,491,815	5,200,420	8,692,235
1858	3,379,737 ..... 41.4 per cent.	4,791,528 ..... 58.6 per cent.	8,171,265

o that, notwithstanding the oppression of the French Navigation Laws, the foreign ships in the French trade are increasing more rapidly than the French ships, and whereas hey carried on only 54.2 per cent. of the French trade in 849, they were carrying on not much short of 59 per cent. in 858.

But this is not the most important of the indications that he Imperial influence in France is used to hasten effecually the reform of the French commercial system. The *Moniteur* has this week announced that the time will be nticipated by several months when the new duties on imorted iron and imported sugar are to come into operation. t is true that the opinion among the Chambers of Comerce and principal merchants and manufacturers of France eems on the whole to incline to a shortening of the time of uspense, to an abbreviation of that dead interval which lways precedes a great commercial change, and to an immeiate facing of the difficulties of their position, whatever these ay be. This no doubt is manly and healthy, and the mperor would probably not have taken, and would have been ustified in not taking, the decision he has, without the suport of some such body of opinion. Still there has been nough division of opinion in France to leave considerable cope to the deliberate influence of the Executive Governent, and it is only due to the French ruler to admit that it as been exercised promptly in the interests of Free Trade.

In another important particular the subsequent decision f the French authorities has been more liberal than the reaty gave us reason to hope. We have several times ointed out to our readers how heavily *ad valorem* duties on anufactured fabrics,—where the raw material is not burened with the duty,—weighs on the coarser fabrics as comared with the finer. In the first draft of the Commercial reaty it was intended that a duty of about 30 per cent. hould be levied on linen yarns and manufactures. Now, of ourse the cost of manufacture is a much larger proportion f the whole cost in the case of fine than in the case of coarse abrics, and hence the flax itself not being thus protected, a 30 er cent. duty is a far heavier difference in favour of the rench manufacturers in the case of coarse yarns where he cost of manufacture is comparatively trifling,—than in he case of fine thread where it is by far the most important lement in the total cost. A 30 per cent. duty on a fabric of which half the cost is in the material nd half in the manufacture, is a 60 per cent. duty on the cost of manufacture if the raw material be free. And as the great advantage of our manufactures was in the coarser fabrics, it was naturally enough feared that a 30 per cent. duty on the product would practically keep out all the coarser linen yarns and fabrics altogether. It has now been decided, as has been explained in a letter to the *Northern Whig* by an eminent linen manufacturer, Mr Mulholland, that a sixfold classification of yarns and a sevenfold classication of linens has been adopted, and moderate specific duties which are satisfactory to the linen manufacturers, imposed upon each class.

These facts sufficiently prove, what is indeed clear enough from other evidence, that the French authorities are doing all in their power to make the Commercial Treaty a real reform,—that, as far as Free Trade is concerned, the true Liberals are at present, *not* the Constitutional party who are bent on "crowning the edifice" with liberty, but the Imperialists who are willing to owe the introduction of a wise legislation to the spontaneous will of the remarkable man who rules them. It is much to be regretted that those who know so well how much more important national self-government is than even the best fruits which it may produce, should lower their cause in the eyes of the world by cavilling at, and even opposing, some of the best results which free institutions in the hands of wise statesmen have been made to yield.

THE POLICY OF INFLICTING A SIGNAL HUMILIATION ON CHINA.

We should have expected that our successes at the mouth of the Peiho would have inflicted a shock on the Imperial authority in China quite severe enough to satisfy even the most aggressive of our Oriental politicians. We should not have thought that in the critical state of that Empire,—where rebels who have gained ground steadily for eight years are threatening the very existence of the Imperial Government,—any politician with his senses about him, not seriously anxious to commence a policy of intervention that must end sooner or later in one of annexation, would reproach Lord Elgin for his forbearance in not marching the whole army up to the very capital itself, and dictating a peace to a prostrate and humiliated Government within the walls of Pekin! Yet such is the reproach actually levelled in no mild terms against Lord Elgin by the *Times*. "If we have aught of manly "honour in our policy," says that journal, "we went there "[to China] to inflict punishment not upon the wretched "soldiery whom we found defending the mudbanks on the "sea-coast, nor upon the poor trembling underlings who, in "their duplicity, were but obeying the orders they had re"ceived from their superiors, and who were acting under the "fear of immediate ruin; we went there to strike at the "directing head in which the treachery from which we suf"fered was planned, and to humiliate in the face of the "Empire the Government which had perfidiously "shed the blood of our countrymen. To this end "there was but one proper course, and that course "was to refuse to accept again promises which had "already proved so worthless; sternly to refuse, instead of "eagerly to solicit, all overtures for peace until the avenging "army had reached the walls of Pekin, and then to exact "the most public apologies for the breach of faith publicly "committed, and public assurances that the Treaty of "Tien-tsin should be faithfully fulfilled. This, with the "smart of the payment of the expenses of the war,—which in "no other way will ever be obtained,—would be at once "humane, honourable, and effective. *Such a signal humili"ation would be felt to the uttermost ends of the great Empire.*" No doubt it would. No doubt "all China would come to know "that the Emperor himself had no choice in this matter," and with what result? Most probably with this,—that the crestfallen Imperial Government would never again make head against, perhaps never again attempt to make head against, the rebel forces,—that the blow which we had aimed would recoil upon ourselves in rendering the very Government with which we were negotiating quite incompetent to fulfil its own engagements with us, in utterly paralysing it at the very moment when it has need of all its strength to save itself,—if save itself it can,—from final ruin. This public, this final, this tremendous degradation for the Imperial Government which the *Times* so desiderates,

which should be published to the very limits of that mighty Empire, and make the Emperor of no account in the eyes of all his subjects, would be the most successful step we could devise for rendering the Emperor of China that which the Mogul, the Peishwa, the Nizam, and a host of smaller nabobs long were in India in relation to the British Government there,—abject dependents on our armed aid against the hatred of a people ripe for insurrection and oppressed with innumerable wrongs. If once we crush the life and the reputation out of the Chinese Government, we must be fully prepared either to give it by our physical aid an equivalent for the *prestige* it has lost,—or to see it vanish before our eyes, and, then, to renew with the rebels the long history of complaint, negotiation, and menace which we have drawn out to so weary a length with the Imperial Government. In the one case, we must be prepared for a policy of habitual intervention. In the other, we must try to believe that a single satisfactory indulgence of fruitless vindictiveness is worth the expense of annihilating the only Government on which we have really made an impression, so that all our work is to begin again. One of these alternatives the *Times*' policy forces upon us. It deliberately exhorts us publicly to degrade a Government, already tottering to its fall, in the eyes of the whole Empire. If this degradation is not to drag it down, only our power can prop it up again,—and systematic intervention begins. If it does, all the fruits of the treaty and the war are lost at once, and it will be necessary to send Lord Elgin again next year or the year after to negotiate with the Tae-Ping rebels a treaty analogous to that which we had wrung out of the expiring Empire.

Now, of course, no one could seriously maintain that it is advisable for the sake of a trifling temporary triumph to extinguish the very Power with which we are contending, or at least to give such an impulse to the already very formidable rebellion as would almost inevitably end in its extinction. The notion which is really at the bottom of the vindictive policy is that a Power which we can extinguish we can also reinforce,—that we shall be able to lend to the humiliated Emperor by our friendship and alliance far more than the strength of which our victory will rob him. But this we regard as immeasurably the more dangerous alternative of the two. It means, as we have said, nothing more nor less than initiating in China with our eyes open the policy we have drifted into in India unawares, and this too with the vast disadvantage of having an almost unmanageable Indian Empire already on our hands. Of this we may be sure, that the mere *reputation* of a good understanding with England and France, wrung out of the Emperor of China at the point of the bayonet, will do nothing to protect the Central Government of China from the rebels. The rebellion which has spread so rapidly in the last eight years will dilate into still larger proportions with the news that the Tartars have been utterly overthrown at Pekin, and there is no reason to think that anything short of military help would afterwards save the throne. Nor can that help, once given, be withdrawn. Of that we have had ample experience in India. Interference of this kind is a policy that is soon beyond our power to restrain. Once begun, the occasions for it multiply and become more and more urgent. That urgency grows like a fate till it ends in its natural consummation, territorial rule. Intervention in Oriental countries is a step from which there is no retreat.

And what does this policy involve? Continued and most costly military expeditions,—higher taxes,—an enlarged debt,—a constant diminution of the inadequate military and naval defences of the country,—and a new series of grave responsibilities on an overburdened Executive, and a Parliament quite incompetent to discuss or rectify the abuses of our Oriental Empire. These are almost the inevitable evils which the hectoring policy in China will now bring down upon us, and they will all be fatally aggravated by the awkward necessity of halving the responsibility in all things with France. A policy of English intervention is expensive, dangerous, and ruinous enough,—but a policy of joint intervention, where every difficult question will give rise to a thousand national jealousies and rivalries, besides its own intrinsic complexities, will be more expensive, more dangerous, more ruinous still. In short, in the name of Commerce the *Times* calls upon us to support a policy which will weigh most heavily on the commercial prospects of England,—which will seriously injure our international relations with China, interrupt our trade, embarrass our finances, multiply indefinitely those disputes from which spring many rumours of war dangerous to commerce, and some actual wars that are fatal to it,—and darken with difficulties far more serious than even those of our Indian Empire, the political reputation of the British Government.

THE RISE IN THE BANK RATE OF DISCOUNT.

THERE can be little doubt that the Bank of England have exercised a sound discretion in raising their rate of discount. The diminution of their resources, though not alarming, is important, and has now gone on for some time. On the 26th September, the stock of bullion amounted to 16,255,951*l*. It is now, however, only 13,897,085*l*, and in the last week only it has diminished by no less than 230,788*l*.

And it is not unreasonable to suppose that this drain may continue. It is certain that some singular operations upon French account have been observable; and what is anomalous *may* always recur. As we do not know why it occurred before, we cannot tell when it will occur again. And the tendency of an imperfect harvest like that of this year must always be to produce a drain of bullion. That tendency may, indeed, be counteracted by the unusual demand for our manufactured goods which may be developed by the additional means of the country which will supply us with the corn we require. But experience shows that, though this tendency may be thus partially counteracted, it cannot reasonably be expected to be wholly counteracted. A new demand can rarely be suddenly generated that will wholly counterbalance the inevitable effect of an unfavourable harvest. The latter is a sudden natural calamity, producing immediate consequences: the former—the new demand—is the slow growth of changing tastes and changing wants. To some extent, all sudden disruptions of the ordinary channels of trade must change the distribution of gold and silver—the commodities that settle the balance year by year of the whole world. The extent of the effect in any individual case must always be dubious, but of the tendency we can speak with confidence. As the available resources of the Bank have undoubtedly of late diminished, and if nothing had been done they would probably have diminished still further, we believe the Bank to have been amply justified in using the best expedient for improving their position, in raising the rate of discount.

It may, it is true, be said that the rate of discount is now higher in this country than it is at the most important places on the Continent. A glance at the table we publish weekly in our City article shows that such is the case. The present rates are:—

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3	3
Hamburg	No Bank rate	2½
Brussels	3	3
Frankfort	2	1½
St Petersburg	5	5½
Vienna	5½	5½

But it is a mistake to suppose that we are never to raise our rate of interest here when the rate here is already higher than the rate abroad. It is a mistake which arises from an imperfect conception of the mode in which a rise in the rate of interest really operates. Its effects are of two sorts: it tends to prevent capital going out, and it encourages capital to come in. It effects the first, because many of the exchange dealers, if not all, have to obtain the bullion by a deposit of securities, and every increase in the rate of interest which they pay is a corresponding diminution of their profits. And this deduction from the exporter's profit is just as great whether the rate here be higher than the rate abroad, or *vice versâ*. If the rise in the Bank rate compel him to pay 1 per cent. more to-day than he would have paid yesterday, it is no consolation to him that the money can be obtained on easier terms in Paris or Hamburg. For his operations he wants the money here.

Again, a rise in the rate tempts capital here for investment; and though a difference of 1 per cent. in our favour might not tempt capital here, a difference of 2 per cent. might do so. Capital, though far more mutable than it used to be, has still some stationary instincts; and the rational maxim is t

bid for it, when we want it, higher and higher till we find the rate that will bring it.

It is true, too, that the reserve of notes is higher than we should have thought necessary some ten years ago, but then the trading transactions of the Bank were much smaller, and, what is more to the purpose, the liabilities of the Bank were so too.

	£
On November 9th, 1850, the private deposits were.....	9,718,483
On November 7th, 1860, the private deposits were.....	13,114,251

Every sound banker should consider his reserve not abstractedly and in itself, but comparatively and in reference to his liabilities. By this plain rule the Bank of England have, we do not doubt, been principally guided; and by it they will be conclusively justified.

THE NEW ZEALAND *CASUS BELLI*.

In treating of the relations between English settlers or colonists and the native races with whom they are brought into contact, we have always endeavoured to uphold the Government, both at home and abroad, in resisting the eager selfishness and the encroaching ambitions which tend to turn the energy of English settlers into a scourge for the feebler races with whom they have to deal in India and those of our colonies where the Aborigines still linger. We believe that one of the hardest and most solemn, as it is certainly one of the most invidious duties of the British Government, both at home and abroad, is to protect the native races which our spreading civilisation seems destined to supplant. We have followed, therefore, the history of the collision in New Zealand, with no inclination to support the settlers against the Maoris,—with profound aversion for those displays of contempt and dislike to the "niggers" which have been from time to time exhibited. But we must say that the conduct of the Government in the matter has seemed to us, so far as we understand it, temperate, firm, and just,—and far from open to the charges which the ecclesiastical party in that colony, and a writer in the last number of the *Saturday Review*, obviously deriving his bias from the same source, have levelled against it. We write under the disadvantage of not having yet seen the last despatches to which the writer in the *Saturday* obviously had access, stating the case of the Governor of New Zealand for the course he has taken. But we have at least Archdeacon Hadfield's statement of the opposite case before us, and the earlier narrative of the quarrel as given by the New Zealand premier, and we are unwilling to wait for the publication of the last despatches before attempting to remove some misconceptions injurious to the New Zealand Government which the article to which we allude is likely to spread in the public mind, since the earliest view of any complicated question which is diffused widely among English readers has almost always a very great advantage over subsequent statements, even though more exactly corresponding to the truth.

By the Waitangi Treaty the English are bound to respect the rights of the natives in all the unsettled land of the colony, and never to encroach upon any land which all the proprietors have not agreed to sell. A great difficulty, however, has arisen as to the definition of proprietary rights. There is an organised faction, or land league, among the Maori chiefs against *any* further sale to the English settlers, and whenever any actual possessor proposes to sell, the chief of the tribe, if he belongs to the league, immediately interposes his authority and claims a feudal right in the land, which he declines to alienate. It is obvious that if such claims as these were admissible to lands which the Maoris desire to keep, only in order to prevent the dreaded encroachment of the English settlers,—the settlement of the Northern Island of New Zealand would be at once at an end. The movement against the sale of land is very widely organised; and, though there are still some chiefs who do not belong to it, it includes, we believe, an *increasing* party amongst them. No doubt the movement is, in a large measure, due to the coarse and insolent treatment of the natives by the lower class of English settlers; but it is the business of the Government to stand firmly between these opposite parties,—and while controlling the encroaching spirit of the settlers, also to refuse their assent to principles which must for an indefinite time delay the extension and prosperity of the colony without in any way conducing to the benefit of the Maori population. The title of savages to really unused and waste lands is in itself scarcely a defensible one;—but that being conceded, to admit the claim of the chief or the natives to veto the sale of land by the actual proprietor, would be a completely imbecile and futile policy for the New Zealand Government.

The *casus belli* at New Plymouth is this. A valuable block of land at the mouth of the *Waitara*, a few miles north of New Plymouth, was offered for sale by a person named Teira, professing to be the proprietor. The title was investigated in a preliminary way in 1859 by the Chief Commissioner for the sale of land, Mr Maclean, who thought the title a good one. It was afterwards investigated more thoroughly by the subordinate Commissioner, Mr Parris, who decided that it was valid. The evidence of individual title is a local one, a matter of rates and bonds. The chief of the tribe, called Wiremu Kingi, or William King, asserted that the "land "was in his hands," and that he would not permit the sale. The title was also disputed by a person named Paora, who said that Teira could not sell without his own consent and that of another dissentient who was then dying, and died soon after. Paora's title was affirmed to be only indirect, through a relative who concurred in the sale. The chief, W. Kingi himself, when questioned "Does the land belong "to Teira's party?" replied "Yes: the land is their's, but I "will not let them sell it." And he did not. When the surveyors went on to the ground to survey it, they were attacked, and this lamentable war broke out.

Now the accusation brought by our contemporary against the Governor is as follows:—"We can pretend to give no "opinion upon the validity or the invalidity of William "King's claim on the land. Probably no one on this side "of the globe is in a condition to unravel the complicated "threads of the dispute. But this at least is clear,—that "the Governor has dealt with a Maori as he never would "have dared to deal with an Englishman, and that he has "plunged us into a costly and perilous quarrel to uphold a "paltry claim which, be it good or bad, has been advanced, "prosecuted, and carried out with very little regard for the "most obvious principles of justice."

Now, the grounds on which this charge is made are two—that a completely different statement of the case is made by Archdeacon Hadfield, who corresponds with W. Kingi, and is in his confidence,—and that whatever be the truth in the matter, the claim is tried, not by an independent court appointed to adjudicate on Maori titles, but by the officers of the Government, whose interest it is to purchase land for sale to the colonists, and who are therefore a "party to the suit."

First, as to Archdeacon Hadfield's version. He maintains that Kingi has a right, not merely feudal, but one of actual possession to a part of the land, and that his answer to the Commissioner, "Yes, the land is their's," means in the (surely very peculiar) Maori idiom "A *part* of the land is "their's." In short, Archdeacon Hadfield represents Kingi as an injured owner, whose title has never been examined, because it was known that he was not inclined to sell, and who was deeply aggrieved by the injustice of the British Governor. He adds that Kingi has always been friendly to the English, and has never been connected with the Land league at all. Now, we must say there is much reason to believe Archdeacon Hadfield to be the tool of W. Kingi in this matter. In the first place, there is indisputable evidence that this chief has long been excessively jealous as to the sale of land to Europeans, and, so far from having always been an ally of the English, he was one of the leaders of the Maori party in the troubles of 1855 concerning a disputed land title on the same spot. He was then appeased by the extreme moderation and forbearance of the present Governor, who wrote as follows on that occasion:—

In the autumn of last year, Mr Cooper, sub-commissioner of Crown lands, was induced to commence a survey of some native lands which had been the subject of a native feud, and the title to part of which was disputed by the natives amongst themselves. Katatore, one of the disputants, warned the opposing natives, one of whom was an assessor, not to persist in making the survey, and on his continuing to do so fired into the ground, which, according to native customs, shows an intent to carry out the quarrel to bloodshed if the aggressor do not desist. The aggressor did not desist, and Katatore shot him and six of his followers. Hence arose a native feud, in which the party desiring to sell urge that we

ought to take part, and that the native assessor was slain in our service. I have, however, disproved of Mr Cooper's conduct in commencing a survey before he was assured that all who *had even a disputed claim to the land desired it should be sold*, and have declined to make a demand for reparation, which could only be enforced at the expense of a general war, including sooner or later all the tribes in the Northern Island.

Is it credible that the Governor who took this mild and forbearing course in 1855, should in 1860 deliberately urge on by force the completion of an unscrupulous purchase on the same spot directly after giving public notice that all claims to the land should be carefully investigated and respected? In the next place, there is direct evidence of the same date that W. Kingi's claim to lands south of the Waitara (the land in dispute) is only a chieftain's claim, not that of an individual owner. We find the following in a letter on this subject, written by a friend of the natives to the Chief Land Commissioner, dated September 24, 1855 :—

When I further reminded them that W. Kingi had no right either to hold or to occupy land on this (south) side of Waitara river, since in 1847 he had given his distinct promise to Governor Sir G. Grey, previous to his coming up from the south, that he would not settle on this side, but on the opposite (north) banks of the river, I received in reply that W. Kingi being the head chief of all Waitara, on both sides of it, it was for himself to choose and to say on which side and on which spot he was to reside. In fine, the Taranaki natives seem to scorn the idea of having that personage set down as merely a second or third-rate chief, and as being possessed of only a nominal right and claim to the Waitara lands which he holds and occupies.

Now, with this evidence before us, and the knowledge that Archdeacon Hadfield knows nothing personally of the locality in dispute, his station being at least 150 miles away, and most of his statements appearing by his own evidence to rely on letters written to him by W. Kingi, we must say we are inclined to believe him the victim of fraud.

The question remains whether the Government can rightly decide on claims when they are naturally biassed in favour of the purchasing interest. We reply, that no doubt an independent court for investigating native titles would be far better,—but that the settlement of New Zealand need not necessarily be delayed till such a court is established. All depends on the *bonâ fide* equity of the Governor and his subordinates in the matter. We have very impressive evidence to show that they have again and again resisted the eagerness of the settlers, and held the balance fair between the two parties. We shall continue to believe, till we see evidence better than Archdeacon Hadfield's to the contrary, that they have done so in this case.

The issue is by no means, as the *Saturday* Reviewer calls it, a "paltry" one. The party opposed to any sale of land among the natives had advanced with rapid strides. If the selfishness of the colonists was to be restrained, it could only be by a Government not wholly negligent of their interests. If, when fair offers to sell valuable land came from the real owners of it, the Government had declined to purchase for fear of offending the natives, they would have been justly declared pusillanimous and untrustworthy. They delayed the sale over the whole of one year, during which time they twice investigated the title themselves, and gave ear to anything that professed to be proof of conflicting claims. What could they do more? The question is in great measure one of veracity, as between the Governor and his subordinates on one side, and the Maori Chief on the other. We know how steadily the same Government has resisted temptations to hasty action which the settlers would have forced upon them. We think we are justified, therefore, in trusting them *primâ facie*, even without the decision of an elaborate New Zealand Court of Chancery in their favour.

Agriculture.

OUR FARM CROPS.—TURNIPS AND MANGOLD.

A remarkable peculiarity of the past season has been the general, the universal failure of the root crops in England. Where twenty tons of swedes and thirty tons of mangold wurtzel and upwards to the acre have usually been grown, five and six tons of swedes and seven and eight tons of mangold are the crops of the present year. This is the more remarkable, because what is commonly called a wet summer has been considered to be the most productive of roots, especially for the swede turnips. And though mangold can stand and even requires a great deal of sunshine, yet frequent rains in the earlier stages of its growth seem necessary to the growth of a first-rate crop. Now, this year there has been very little sunshine, but the main obstacle to the growth of roots has been the perpetual succession of rains, by which the land has been kept so wet and sodden that nothing but aquatic plants could make any progress. This, indeed, is noticeable in the strong land meadows and pastures where, though well drained, the coarse water grasses, which had apparently died away, have this year sprung up with great vigour. The failure of roots is due entirely to the season, and is a calamity which no care or management on the part of the farmers could have prevented. The chief lesson to be drawn from the occurrence is to take care that the land be well drained. Many fields which till now were believed to have been completely drained, have this year been discovered to be incompletely freed from water, and we have do doubt that much future benefit will hereafter be derived from the extra drainage done during the coming winter.

The most experienced farmer may profitably peruse a very complete work, entitled "Our Farm Crops," by Mr John Wilson, Professor of Agriculture in the University of Edinburgh, now in the course of publication in monthly numbers. Each number is complete in itself, dealing with one or two particular crops. The 4th, 5th, and 6th parts contain the Pea and Turnip crops; the Kohl-Rabi, Rape, Cabbage, and Mustard crops; and the Mangold Wurzel and Carrot crops. What is called turnip husbandry, *i.e.* the growing of turnips on light land and feeding them off with sheep as the preparation for the barley crop, is a modern system, and the turnip is generally considered to have been introduced into the husbandry of this country at a comparatively recent period. But Professor Wilson shows that it was known and cultivated by the Greeks and Romans. Pliny says that on well-cultivated farms many of the roots would weigh 40 lbs and upwards. The fly was the ancient as it is the modern enemy of this crop. Their remedy was to sow soot and ashes with the seed, and like ourselves, to promote its rapid growth by means of a fine tilth and artificial manures. Thus our advanced practice in turnip growing, adopted only on our best cultivated farms, "was known to and commonly adopted by the Roman farmers 2,000 years ago." In the gardens of the religious houses the turnip seems to have been cultivated in this country from the earliest times, but Lord Charles Townsend, of Rainham, in Norfolk, in 1730, first gave this crop the status as a field crop it has ever since maintained. The farmers of Northumberland, Roxburghshire, and Berwickshire have, however, advanced the cultivation of turnips far beyond the point attained by the Norfolk farmers. This may in part be due to the moister climate of the Northern counties. On all the light soils of this country the turnip is now the corner-stone of agriculture; without it, indeed, these soils could not be made half as productive as they have become, as but for the sheep no sufficient supply of manure could have been carried on to the fields. Ample and most useful details of the kinds of turnips, the methods of their cultivation on various soils, and the diseases to which the root is liable, are given in the 4th part of Professor Wilson's series, to which we can recommend our readers to refer.

Mangold wurzel, like the turnip, was known as a cultivated plant to both Greeks and Romans, but was grown apparently only for culinary purposes. It was probably the garden beet. In the field it was grown on the Continent before its introduction into this country by Thos. Boothby Parkins in 1786. Since that time great progress has been made in its improvement and cultivation; but it has not been so completely acclimatised as to stand our winters. The orauge globe is the most hardy variety, and is the most extensively cultivated in this country. Mangold will grow on any soil with good cultivation, but thrives best where there is a considerable amount of "argillaceous matter;" but by thorough drainage and deep tillage large crops are grown on the strongest clays. A good loam is, however, the soil in which the mangold delights. On chalk soils it is the least successful. Of late years mangold has been gradually used as a portion of the regular farm rotation. To secure a good crop, deep autumn ploughing is essential; and if the manure can be put on in the autumn so much the better. Manure from the farm-yard should be used without stint; and about three or four cwts of salt to the acre, with a mixture of superphosphate and guano, should be drilled in with the seed. The sowing should be finished by the middle of April. From 35 to 40 tons per acre, or even more, may be grown in fair seasons. With good management, there is no crop which seems to be capable of such an indefinite increase by the use of heavy dressings of manure as the mangold. There are many instances where more than 60 tons to the acre have been grown. A common mode of mismanaging mangold is to strip the leaves from the growing plants during the months of August and September, and this is always done at the expense of a great loss of weight in the roots. An experiment made by Professor Buckman proved that by stripping the leaves constantly as they attained a fair size, was to lessen the weight of roots by one-half. Other experiments have confirmed that view. For a very complete manual of mangold culture and management we can send the reader to the 6th part of Professor Willson's work, "Our Farm Crops."

AN ORACULAR LANDOWNER.

Doubtless the farmers require some words of comfort and sympathy from their landlords at the present time. There must be many of them with whom the payment of Michaelmas rent will be somewhat difficult. The wheat or barley commonly relied on for that purpose will not this year be available, and the great fall in the price of stock will prevent sales by any farmers who are not absolutely compelled to sell. Such are the circumstances under which the Cumberland magnate, the Earl of Lonsdale, recently addressed the farmers at the West Cumberland agricultural meeting. We cannot help thinking the comfort offered was somewhat cold. After stating that, from the badness of the season, cattle in the month of August last were in no better condition than they ought to have been in May, that "wheat would be rather deficient, and would not yield the quantity of flour that it has in former times," and after making a reference to Sir James Graham's remarks on drainage, his Lordship said:—"With all the bad weather, seasons are not invariably bad; and though we have had two bad seasons, we ought to calculate on the generality, and we may hope for two good seasons to come that will remove all the despondency that in some quarters exists at present." This is very oracular, but appears to have little practical aim. Of course farmers hope for better seasons, or they would not go on, where they can, with their business; and in the too many cases of farmers who will be knocked down by the present season, it is of little avail to direct their hopes to possible good seasons in the future. The true way of "improving the occasion" of the present bad season would be to point out to farmers the imprudence of taking more land than they have capital to manage under all circumstances, including the occurrence of bad seasons; and to recommend them not to embark in farming at all without such security of tenure as will enable them to form their calculations and make their arrangements under the certainty of holding their farms for many years. How many of Lord Lonsdale's tenants could do that? What proportion of the farmers present could do so? He then added:—"This is one side of the picture—a certain degree of injury done to a certain crop this year. But if you look at the other side of the picture, and at what has taken place during the last twenty or thirty years, you see the population gradually increasing, and that there is greatly increased wealth in the country." Well, admitted. Farmers know all this or they could not pay the rents they pay; rents, be it remembered, framed on an estimate of prices for corn promised by Act of Parliament, but never realised. These promises, too, were made especially by the party of which Lord Lonsdale is an eminent member. Now the farmers are told not to place their trust on corn growing. "There is machinery gradually making progress every day, and it is to the saving of labour and production at a cheap rate that we must hereafter look for profit to the farmer. This country has an advantage in the articles of its growth; these are wool, meat (the manufacture of meat), and butter. I should say with wheat other countries can come into competition with us. Their climate is better suited, there is easy transport and cheap freights. The advice which has been frequently given to the farmers of this county is that they plough too much. I think they had better calculate on the produce of their stock, such as wool, butter, and meat, rather than on the growing of corn." To the latter portion of this statement little exception has to be taken, but the former portion, which says that to production at a cheaper rate farmers must henceforth look for profit, must be received with much caution and qualification. It is not by saving labour by means of machinery, but by using more power, comprising in various proportions human and horse labour in combination with machinery and implements, and involving altogether greater outlays than have hitherto been deemed necessary, that farmers must in future look for profit. Of course they must obtain larger returns in proportion to their outlay than they do at present to compensate them for the greater risks they run, but that is not in the sense Lord Lonsdale referred to machinery as producing at a cheaper rate. And this opens up questions to which Lord Lonsdale made not the slightest allusion. Supposing farmers—unsecured by leases—to increase their profits,—either, as Lord Lonsdale assumes, "by saving labour and producing at a cheaper rate," or through increased outlay, as under actual circumstances can alone happen,—the immediate effect of competition amongst farmers will be to give the whole of the increase to the landlords in the form of rent. When, therefore, we hear landowners recommending farmers, who are yearly tenants, to improve their husbandry, to economise their labour, and to use machinery and implements more extensively, they are simply recommending their tenants, at their own cost, to increase their landlords' rentals. Of course where fair and long leases are given no such imputation can exist. Such cases are, however, comparatively rare, and exhortations to farmers such as we have referred to not unfrequently look like irony. One thing, however, should be mentioned, Lord Lonsdale told the farmers that in order to improve their stock they must improve their pastures, and that he was always ready to drain any part of his land his tenants might require. This is good advice, backed by a proper offer of co-operation on the part of the landlord.

Literature.

COMMERCIAL LITERATURE.

Ure's Dictionary of Arts, Manufactures, and Mines. Longman, Green, and Co. Part 12.

This number concludes a very valuable paper on the Dressing of Ores, and contains a very interesting one on the Manufacture of Paper. We extract from it the following table, showing the extent of the manufacture of paper for the last 10 years:—

Date.	Charged with Duty. lbs	Exported on Drawback or Free of Duty. lbs	Retained for Home Consumption. lbs
1850	141,032,474	7,762,686	133,269,788
1851	150,903,543	8,305,598	142,597,945
1852	154,469,211	7,328,886	147,140,325
1853	177,633,010	13,296,874	164,336,135
1854	177,896,224	16,112,020	161,784,204
1855	166,776,394	11,118,551	155,657,843
1856	187,716,575	14,798,979	172,917,596
1857	191,721,620	16,031,063	175,690,557
1858	192,847,825	16,548,828	176,298,997
1859	217,827,197	20,141,350	197,684,847

The present number concludes with a very interesting paper on Printing, and shows, by a number of excellent woodcuts, the progress this mighty engine for the instruction of mankind has made since a few obscure Germans were led to discover the mode of printing by moveable types. All glory to John Gutenburg, of Mayence, who, we believe, was the discoverer of the process, which enabled him and his partner, Fust or Faust, to sell a number of Bibles imitated from the MSS. at the reduced price of 60 crowns,—a number which were commonly charged 500. We cannot dismiss this work without again drawing attention to the clearness and excellence of its woodcuts.

The Newspaper Gazetteer and Guide to Advertisers: an Annual Register of Newspapers printed and published in the United Kingdom of England and Wales, Scotland, Ireland, and Islands in the British Seas. Revised and corrected for the Year 1860. Second Edition. London: printed for and published by Newton and Co, General Advertising London and Country Newspaper Office (Established 1786), 2 Warwick square, Newgate street, City.

This useful and standard publication not only supplies all the information which authors and advertisers can reasonably require concerning British Newspapers, but a good deal of miscellaneous knowledge besides, which will, we fear, be rather wasted upon the readers. More to the point are the coloured maps, "showing the immediate district of every provincial newspaper's local and general circulation." Besides the tabulated lists of newspapers in each county, there is a large sheet in which nearly all of them are arranged in the alphabetical order of the towns; and at the end of the volume, prospectuses of such journals as have sent them for insertion are printed in full. The tabulated lists have evidently been very carefully compiled, and in only one instance (that of the *Newcastle Chronicle*) have we detected a discrepancy between them and the published prospectus. But the sheet list contains many inaccuracies in the details of price and day of publication. In the Birmingham papers we counted one, in the Cheltenham papers two, in the Manchester papers three, and in the Newcastle papers four.

The list of periodical publications is very useful. There are, however, a few omissions, probably oversights, in it: *Meliora* (quarterly), *Colburn's New Monthly Magazine*, *English Woman's Journal*, *Monthly Packet*, *Kingston's Magazine for Boys*, *Recreative Science*, *Non-Subscriber* (published at Belfast), and the *Reasoner* (weekly). It would make the list of periodicals more complete if the Almanacks and Annuals were included. Hannay's Almanack, the British Almanack and Companion, Punch's Pocket-book, the Illustrated London Almanack, the Year-book of Facts, and the invaluable Nautical Almanack, are representative books that form an essential portion of our periodical literature. A still more useful addition to the present work would be a correct list of the colonial newspapers, on the same plan as that which is here used for those of the United Kingdom. We shall hope ere long to see this done.

GENERAL LITERATURE.

A Journey in the Back Country. By Frederick Law Olmsted, Author of "A Journey in the Sea-board Slave States," "A Journey in Texas," "Walks and Talks of an American Farmer in England," &c. Sampson Low, Son, and Co., 47 Ludgate hill.

[FIRST NOTICE.]

It is not common at any time, or in any country, to find a great public question in which the vital interests of a large part of the nation are involved, and round which personal interests centre, and party politics wage fierce war, approached with calmness, moderation, and a single desire of ascertaining the truth. Certainly it is not less uncommon when the country is America and the subject slavery.

On one side, the undeniable evils of the system as it exists in the United States, evils that cannot be wholly confined to those States

that uphold it, are so great, and the cases of individual cruelty and oppression that stand out from the general background of slavery appeal so forcibly to every unwarped feeling of justice and humanity, that it is hard for any one born in a free State to hold the balance with equal-handed justice, to enter into the peculiar difficulties of the slave-owner's position, and give due weight to the pleas he may fairly urge in his own behalf; while, on the other, the magnitude of the immediate interests at stake, the blindness of habit, the pleadings of selfishness, as well as the real difficulties that beset the way to any amelioration of the condition of slaves with a view to the final extinction of slavery, combine to make the Southern planter not only acquiescent in a state of things to which he perhaps was born, but lead him to regard it as essential to the prosperity of his State and the due development of its wealth, or even as a special ordination of Providence for his temporal advantage, and the spiritual welfare of the African race. The task that Mr Olmsted took in hand when he entered upon his series of travels in "Our Slave States" was the difficult one of reconciling these two extremes, by the collection of evidence from all quarters, from which a deliberate judgment may be formed, as far as possible unbiassed by preconceived notions, personal feelings, or party prejudices. .

It was, according to his own testimony, with a view to conciliate both parties, with the hope of "aiding those disposed to consider the subject of slavery in a rational, philosophical, and conciliatory spirit," and also of finding out those boasted "peculiar virtues" of the South, which, as springing out of this domestic institution, might moderate the Northern condemnation of slavery, and turn the cry for abolition into "a respectful purpose of assistance" to the Southern States in the solution of a difficulty that they have inherited from their fathers, that Mr Olmsted undertook his laborious inquiries. The conclusion to which they have brought him is the freer from any suspicion of unfairness in consequence of this favourable feeling towards the South, with which, as he frankly confesses, he began his investigations.

"I will not here conceal for a moment," he writes in his preface, "that I was disappointed in the actual condition of the people of the South, citizen and slave; that the more thoroughly and the longer I was acquainted with that which is ordinary and general, the greater was my disappointment. In the present aspect of affairs, it would be an affectation of moderation if I refrained from expressing my conviction that the larger part of the people of the South are in a condition which cannot be too much deplored, the extension and aggravation of the causes of which cannot be too firmly and too persistently guarded against."

Into any question as to the justifiability of slavery in general, Mr Olmsted does not enter. As established in the United States, he conceives it to be justified at present by necessity; yet, as a tree may be known by its fruits, he endeavours, by a careful collection of facts, to find out what those fruits really are, and to furnish the grounds for an answer to two questions, upon which, as he conceives, the whole matter practically hinges. Is slavery hurtful or beneficial to the States that maintain it? and, if proved hurtful in the long run, is it nevertheless essential to the production of that commodity, cotton, which is a chief source of wealth to those States, and with the production of which somewhere or somehow the world cannot dispense?

The answer given to both these questions is unfavourable to slavery. A convincing array of facts gives evidence to the wasteful and ruinous tendency of slave agriculture; while very weighty testimony is also produced in support of the conclusion that cotton could not only be grown, but grown more abundantly and more cheaply by free, than by slave labour. These are important points; and Mr Olmsted, in bringing them forward upon a solid and trustworthy basis, is doing good service to his country, and to that cause of emancipation of which he is no professed advocate. The conclusion in which he rests with regard to this matter cannot be better explained than by another short extract from his preface:—

The subjection of the negroes of the South to the mastership of the whites, I still consider justifiable and necessary, and I fully share in the general ill-will of the people of the North toward any suggestion of their interfering politically to accomplish an immediate abolition of slavery. .....It does not follow, however, that the evils of slavery must continue to be as great as at present. Nor does it follow that consideration of these evils at the North must be either futile or impertinent. .....The emancipation of the negroes is evidently not a matter to be accomplished in this generation; but again it does not follow that even emancipation cannot be anticipated, or the way of accomplishing it in some degree prepared. The determination that it shall not be, is much more impracticable, fanatical, and dangerous, than the argument for immediate abolition. The present agitation of the country results less from the labours of abolitionists, than from the conceit, avarice, and folly of wealthy owners of slaves.....It would be presumption in any man to predict when, or in what manner, slavery is to end, but, if the owners of slaves were so disposed, it appears to me that there would be no difficulty whatever, politically, financially, or socially, in diminishing the evil of slavery, and in preparing the way for an end to it.

To illustrate the effects of slavery upon the material prosperity of the Southern States, Mr Olmsted has only to point to Virginia, where it has had the longest trial.

In Virginia itself, an essentially frontier condition of society prevails to this day. Beasts and birds of prey, forests and marshes are increasing, bridges, schools, churches, and shops are diminishing in number where slavery has existed longest. The habits of the people correspond.

In other States where slavery has been established for any length of time the same process is going on: abandoned plantations are of constant occurrence, where the worn-out soil is poorly cultivated by a half-starved population of whites, "stupidly content, helpless, and hopeless in their ignorance and poverty." Yet, with this abundant supply of unused labour at hand, a scarcity of labour caused by the high price of slaves, this again being due to the increasing demand for cotton, is raising the cry for a renewal of the African slave trade throughout the South. Mr Olmsted's remarks upon this unnatural and ruinous state of things are very forcible:—

The present facility of acquiring land in the cotton States, the capital needed for its purchase not exceeding, for fresh soil, on an average three dollars an acre, and the large outlay of capital needed to obtain labour, necessarily induces that mode of agriculture which has desolated so large a portion of the sea-board Slave States. Twenty slave labourers cost over twenty thousand dollars. They will cultivate four hundred acres of land, which cost less than a tenth of that sum. Knowing that he can buy as much more as he wants at an equally low rate, why, when the production of his land decreases, should the slaveowner drain it, or manure it, or "rest" it, or vary the crops, to prevent further exhaustion? It will cost twenty dollars' worth of labour to manure an acre. Why make this expenditure when he can obtain other land at five dollars an acre (fenced and ready for the plough), which, without manure, will return just as much cotton for the same amount of labour (in cultivation merely) as this with it? Why, when on fresh soil, he can get three hundred dollars' worth of cotton a year for each slave employed in cultivating it, should he apply that labour to some other crops on his old land which would return him not more than a hundred dollars for each slave employed? "Our small planters," says the Hon. C. C. Clay, "after taking the cream off their lands.....are going West and South in search of other virgin lands, which they will despoil and impoverish in a similar manner." And (resumes Mr Olmsted) when they have done this, they fully anticipate going still farther and further, and again and again repeating the process. Can the men who do this, and who have these anticipations, be expected to build railroads, or bridges, or schools, or churches? Can they, wanting nothing but corn, coffee, hogs, niggers, and camp furniture, support mechanics or merchants? Can they form by themselves a prosperous or respectable community? Will the annexation of Sonora, of the whole of Mexico, Nicaragua, Cuba, and the Amazon region enable them to do so? Except the African slave trade is re-established, it will have—and every Southern gentleman knows it, and will acknowledge it—directly the contrary influence. The first thing necessary to the prosperity of the South is, to make possible to its citizens the comforts of civilised life. To this is first essential the civilised idea of home; and this will not be gained while the nomadic and vagabond propensities of its petty patriarchs continue to be stimulated, as they have hitherto been, by our Government.

If from the land thus wasted by ill-cultivation we turn to the people, we find no less palpable proofs of the evil effects of the slave system. Of the slaves themselves it will be enough to say that, as a rule, beyond an excessive demand on their strength by overwork, Mr Olmsted found them well fed and well cared for bodily; still his volume bears ample witness to the weakness of pecuniary interests as a safeguard to the slave when the passions or fears of his master are roused by the resistance of his human chattel, and of the impossibility of treating even a negro, whatever theory the master may hold as to his non-humanity, on purely economical principles as valuable property. "I found," says Mr Olmsted, "the lives and the comfort of negroes, in the great cotton-planting districts especially, habitually regarded by all classes much more from a merely pecuniary point of view, than I had ever before thought they could be; and yet that, as property, negro life and negro vigour were generally much less carefully economised than I had always before imagined them to be." As to the religious and moral benefits they are said to derive from subjection to the superior race, they would seem to be in the mass of little importance.

Before I visited the South, I had believed that the advantages accruing from slavery, in this way, far outweighed the occasional cruelties and other evils incidental to the system. I found, however, the mental and moral condition of the negroes, even in Virginia, and in those towns and districts containing the largest proportion of whites, much lower than I had anticipated, and as soon as I had an opportunity to examine one of the extensive plantations of the interior, although one inherited by its owner, and the home of a large and virtuous white family, I was satisfied that the advantages arising to the blacks from association with their white masters were very trifling, scarcely appreciable indeed for the majority of field-hands. Even the overseers had barely acquaintance enough with the slaves individually to call them by name; the owner could not determine with confidence if he were addressing one of his own chattels by its features. Much less did the slaves have an opportunity to cultivate their minds by intercourse with other white people. Whatever of civilisation, and of the forms, customs, and Shibboleths of Christianity they were acquiring by example, and through police restraints, might, it occurred to me, after all, but poorly compensate the effect of the systematic withdrawal from them of all the usual influences which tend to nourish the moral nature and develop the intellectual faculties in savages as well as in civilised free men.

In point of morality, the negro has certainly gained nothing. Many times did Mr Olmsted, from his own observations and the confessions of slaveowners, find the depth of meaning in a sentiment uttered by one of the most liberal among them:—"I've got a family of children, and I don't like to have such degraded beings round my house while they are growing up. I know what the consequences are to children of growing up among slaves."

In religion the gain is doubtful; "the result in the majority of cases has been merely to furnish a delusive clothing of Christian forms and phrases, to the original vague superstition of the African savage." More enlightened teaching is almost everywhere sedulously discouraged.

In what degree the "domestic institution" is beneficial to the white race that upholds it, the condition of the country they inhabit forms a not untrustworthy answer. Mr Olmsted, after showing that the moderately large planters of the South do not live in equal comfort or possess the "advantages for a rationally happy life with the average of Northern farmers of half that wealth," and that the wealth of the richer planters does little or nothing to advance the prosperity of their States, and their own consequent personal advantage, proceeds thus:—

Of course, it cannot be maintained that no one, while living at the South, is actually richer from the effects of the cotton demand. There are a great many very wealthy men at the South, and of planters, as well as land dealers, negro dealers, and general merchants, but, except in or near those towns which are practically colonies of free labour, having constant direct communication and intimate relationship with free countries, the wealth of these more fortunate people secures to them but a small proportion of the advantages which belong to the same nominal wealth anywhere in the free States, while their number is so small that they must be held of no account at all in estimating the condition of the people, when it is compared with the number of those who are exceedingly destitute, and at whose expense, quite as much as at the expense of their slaves, the wealth of the richer class has been accumulated.

Thus, from Mr Olmsted's experience and wide investigations, it would appear that the richer whites, except in a few comparatively rare instances, live in want of almost all those things which are considered, in free States, as essential to comfort and civilisation, —in a state of discomfort, dirt, and ignorance, in short, that would be incredible if not supported by the eye-witness of one who would not himself have believed it possible without the most convincing proofs; while the destitution of the poorer whites, who are estimated (by a Southerner and staunch advocate of slavery) as outnumbering the slaveholders by three to one in the South-west, stands in need of no proof. With these facts before us as the results of a careful and impartial survey, can there be any doubt as to the falseness of those pleas upon which slavery is defended—"that it elevates the tone of the superior," adding to his refinement, "preserves from degradation the inferior," and "promotes the general welfare and increases the wealth of the community"? We shall return again to Mr Olmsted's valuable work.

A Century of Despotism in Naples and Sicily. By Susan Horner, Translator of Colletta's "History of Naples." Hamilton, Adams, and Co., London; Edmonston and Douglas, Edinburgh.

A book that gives in a brief and popular form—so that he who travels may read—a history of the tyranny of the Court of Naples for the last hundred years, and of the repeated but ineffectual attempts of its subjects to assert their constitutional liberties, cannot but be useful at a juncture when a right understanding of the real grounds for the revolt in Naples and Sicily is of primary importance in forming any correct judgment on, or even for taking an intelligent interest in, its progress.

To many, doubtless, the slight, though clear and connected sketch of history contained in this volume will be of little value, since it will contain no facts new to them, and does not aim at anything more than a bare narration of facts; but to those, and they are probably also many, who have but a vague knowledge of the events of Neapolitan history, and whose feeling towards the people of Naples and Sicily is rather one of indignant compassion for physical sufferings than of an enlightened sympathy with national oppression, this outline of the continual efforts made by both, but especially by the Sicilians, for the establishment and maintenance of a constitutional form of government, will not be unwelcome, and may tend to raise the mere feeling of instinctive pity awakened by their sufferings into a more lasting, because a more moral and rational, interest.

The Neapolitans have gained the character of a fickle and indolent people; quick to rise in revolt and easy to be subdued; without union and without perseverance. In some degree they have deserved this character, but recent experience would show that the hard lessons of adversity have not been learnt in vain. The selfish disunion of 1820 has not been repeated now. Sicilians and Neapolitans are joined together in a common cause, forgetful of all "hatred of race" or all past "cruelty and injustice" on either side; and to show that the exertions of the people, though powerless to restrain the despotic will of the King, have not been without effect upon the welfare of their country, we need only extract a passage from a memorandum written in 1856 by Mr Petre to Lord Clarendon, and quoted in the book before us:—

Now, as in 1847, it is a question of guarantees, not of reforms. If the civil and political conditions of society in the Kingdom of Naples have grown *de facto* infinitely worse since 1847, *de jure* they have considerably bettered. The Constitution of the 10th February, 1848, sanctioned and irrevocably sworn to by the King, has passed into the public law of the Kingdom.....The fact of the Constitution not being actually in vigour, is no argument or proof of its being no longer in existence. It exists in the same condition as all the other laws of the monarchy, *de jure* though not *de facto*. Arbitrary power, supported by military force, has usurped the place of all laws. "The cessation of arbitrary power, and the execution of the law,"—such is the motto of the honest and enlightened portion of the people in the Kingdom of Naples, and that portion includes the great mass of its inhabitants.

General Colletta's "History of Naples" is the chief authority from whom the authoress has compiled her present work. She has done it with much discretion, the chief points are brought prominently forward, digressions are avoided, and the matter kept well in hand. The writing is not free from faults, but is, on the whole, easy and clear. We must, however, demur to the hope which the authoress expresses in her preface, that "some may here find amusement and instruction." Instruction, no doubt, may be abundantly gleaned from our neighbour's calamities, but that must be a strange taste that can find amusement in reading this chronicle of national struggles and despotic vengeance.

The Graduated Series of Reading-Lesson Books, for all Classes of English Schools. In Five Books. Book the Second. London: Longmans. 1860.

The reading-lessons in this volume "are arranged in three groups, under the heads of 'Miscellaneous,' 'Stories of Animals,' and 'Adventure.' To these a small collection of simple ballads has been added." The Editor "has throughout aimed at a certain continuity in the treatment of topics," desiring "to cultivate a taste for reading by presenting to the pupil only that sort of material which he is capable of assimilating in an easy and healthful manner." The selection comprises a large proportion of good and well-known tales, but they are interspersed with others which, to our taste, are far from pleasing,—for instance, "The Three Billy Goats," "Crazy Tim," and "The Nobleman and his Noble Servant" (published some years ago under the title of "Eric's Grave"). The ballads at the end are of very unequal merit, but "John Gilpin" and "Chevy Chace" are always welcome. We are at a loss, however, to guess why the latter should have been abridged, and brought to so abrupt a termination. The best part of the volume is the second group,—"Stories of Animals,"—which are very good.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

Attention has been excited here by the articles in the Economist on the pre-emption clauses in the Treaty of Commerce and the supplementary convention. The Economist has hit a grave blot which no one else saw. The treaty declares expressly (Art. 4), that *ad valorem* duties shall be calculated on the *value at the place of production* (that is in England) of the article imported, with the addition of the expense of transport, insurance, and commission; whereas the supplementary convention requires that if need be the value shall be ascertained by exports in *France*, and their estimate is evidently intended to be made (as the Economist remarks) according to the *selling price in bond in the French market*, else the *vised* invoice which the importer is required to produce would naturally be accepted as proof sufficient of the value in *England*. This is a very serious discrepancy, and if it be not removed will place importers in an embarrassing position. But I must call your attention to another difficulty:—Art. 5 of the supplementary convention says:—"When articles upon which an *ad valorem* duty is levied have been previously warehoused, the duty shall be levied according to the value of those articles at the time of their actual entry into France."

Now, the Director-General of Customs has just issued a circular to his subordinates giving them instructions for the carrying out of the treaty; and these are the terms in which he speaks of goods

"previously warehoused":—"It was just that the value declared and admitted at the entrance in the port of importation should be *afterwards modified*, if, instead of entering immediately into consumption, the merchandise taxed *ad valorem* were admitted into bond, or sent in transit or for change of entrepot to another point of the territory for the duties to be paid subsequently. This is what results from Article 5 of the convention. Thus it will always be the *actual value* AT THE MOMENT OF THE DECLARATION OF PAYMENT which will serve as a basis for the application of duty."

Now, it is clear that the words underlined are in flagrant contradiction to the text of Article 5; unless, indeed, by some extraordinary metamorphosis of language, "the time of *actual entry* into France" is the same thing as payment on being taken out of bond after a detention of, it may be, one, two, six or twelve months, or even three years, the ordinary maximum for allowing goods to remain in bond in this country.

With regard to what the ECONOMIST has said about pre-emption with an addition of 5 per cent. being rather hard on the importer, there is no doubt great truth in it; but it is to be remarked that if a much higher sum had been fixed, the Government would have defeated its own object, which is to punish false declarations. Thus, if a man declares to be worth 100*l* goods which are worth 130*l* or 140*l*, he gets 105*l*, and is punished by the loss of the difference; but if a high per centage had been fixed he might, with little risk, place the Customs department under the vexatious alternative of receiving less duty than is due, or of buying large quantities of goods it does not want. It was, in fact, the fear that abuses of this kind would be committed, even with the 5 per cent. addition, which led to the introduction in the supplementary convention of articles modifying the pre-emption clause in the original treaty. That clause simply stipulated that if the Custom House authorities should be of opinion that "the declared value was insufficient, they might take the goods on paying the importer the price declared with an addition of 5 per cent.;" but the supplementary convention says that they may either do that, "or levy the duty on the value declared by the experts." Perhaps this would have been sufficient without the imposition of penalties; but doubtless the negotiators of the treaty thought that it would be wise to hold them *in terrorem* over importers, so that they may not be tempted under any circumstances to make false declarations, and so give trouble to Customs officials.

The remark of the ECONOMIST, that to confer on the French Customs the power to exercise pre-emption with an addition of 5 per cent., is a virtual limitation of the profits of importers to that figure, is both ingenious, and, under the letter of the treaty, true; but then the Customs department must become a gigantic warehouse, must be ready to throw commerce into frightful confusion, and must violate in an outrageous manner the *spirit* of the treaty. These things are not to be expected. The pre-emption article in the treaty can only be meant to apply to cases of patent fraud; and assuredly the French Customs will not be mad enough and wicked enough to think of extending it to legitimate commerce. Still it is to be regretted that the article was not drawn up in such precise terms as to render impossible any unfair extension of it.

After all, in spite of contradictory and unfavourable stipulations and of loose wordings, the real importance of the treaty lies in the manner in which it is to be executed. On this point it is but just to say that the French Government is determined to act in a perfectly liberal manner. The circular of the Director-General of Customs above referred to, leaves no doubt whatever on the matter, as will be seen from the conclusion of the document:—

In concluding these instructions, I must call the attention of the service to the spirit which must preside over the application of the new tariff. The economic programme summed up by the Emperor in his letter to the Minister of State, and the Treaty of Commerce with Great Britain, are the solemn manifestations of principles and tendencies which must henceforth be developed in the relations of France with other countries. It is the duty of the officers of the Customs to impress these principles and tendencies on their minds, and to carry them out in their daily operations. Vigilant in preventing fraud and assuring the revenue of the Treasury, they must show themselves conciliatory in their relations with upright commercial men, and liberal in the interpretation of regulations and the solution of doubtful questions. I have no need to remind the chiefs of the service that the rapid movement of affairs increases receipts, and that the public revenue profits definitively by all that favours the development of commerce and manufactures.

It would take more space than can be afforded to follow the Director-General through his circular: it is, indeed, but an enlargement and development of the text of the treaty and of the complementary convention. But it must be remarked that the circular shows that imports, in order to profit by the treaty, must be made direct in French or British vessels from the United Kingdom; and that if made by foreign vessels, "those vessels must pay the ordinary dues on navigation, and their cargoes must be subjected to surtaxes according to the flag of the vessel." On the subject of certificates of origin, it repeats what is said in the treaty, but with the important addition that "the Board is disposed to prevent all useless exigencies in the accomplishment of the formalities required by the convention," and even at a future period to ascertain "if a certain degree of toleration as regards justifications of origin," may not be accorded. It says, too, that travellers are not to be subjected to the necessity of producing certificates of origin when the things they bring are evidently not destined for commerce, or not too numerous for their apparent position. Touching the importation of machines, the circular, after noticing that the production of descriptions and plans is no longer required—a most important reform—says that the duties are to be imposed on the net weight under the law of 9th June, 1857. The circular sets forth at some length the *modus operandi* to be followed in the levying of *ad valorem* duties, and of proceeding in cases in which reference to experts is made; but the only point of general interest is the contradiction between what the circular says, and the text of the treaty which has been noticed above. The other points touched on by the Director-General call for no observation.

No further portion of the tariff to be imposed under the treaty has been published; but the whole of the tariff has been settled, and will doubtless appear before long. I observe that several provincial newspapers in England have announced one after the other that the duties on most sorts of yarn will be about 10 per cent. *ad valorem*, and on most sorts of fabrics 15. Information to this effect has already appeared in the Paris correspondence of the ECONOMIST.

The affair of the Turkish loan which has been taken in hand by M. Mirès, head of the Caisse Generale des Chemins de Fer, and a bold speculator, excites great interest here. It is said that the Credit Mobilier is also likely to be concerned in it. At one time the allegation was that the amount of the loan would be 16,000,000*l* sterling; at present, however, half that sum is spoken of. But the affair cannot be launched without the formal consent of the Government; and it is very likely to feel great repugnance to the idea of allowing so large a sum to be raised in France to be sent abroad.

On the Bourse there has been more activity during the past week than for a long time before, and a notable rise has taken place in quotations. This is owing partly to the political situation having become infinitely less threatening, partly to the people interested in the Turkish loan affair having operated for an advance. The news of the increase in the rate of discount by the Bank of England, though expected, has created some sensation; it will of course render one by the Bank of France inevitable.

The following are the quotations; those of the Eastern, Mediterranean and Lombard lines are *ex div.*:—

	Wednesday, Oct. 31.	Thursday, Nov. 8.

Do. do. 500f, 3 —	468 75	460 0

The military successes in China are considered likely to be of great commercial importance. For it is not doubted that a large pecuniary indemnity will be exacted from the Chinese Emperor, and that he will be compelled to make concessions which will enable France greatly to extend her trade with the country. Some people calculate that the indemnity will not be less than 12,000,000*l* sterling, but evidently this is only a mere guess.

The Customs department has adopted a measure of some importance: it is that for the future the legal tare on the import of all sorts of sugar not refined and not assimilated to refined shall be 5 per cent., instead of as heretofore varying according to certain qualities.

It is stated that of 1,031,104 railway bonds issued by the Bank of France on behalf of the companies in July last, the calls on as many as 783,608, amounting to 271,822,438f, have already been paid in full, although they could not legally have been exacted for three months to come. This, combined with the readiness with which the recent loan of the Credit Foncier was subscribed, is regarded as a proof that there is a considerable amount of unoccupied money in the hands of the public.

The Western Railway Company has reduced its tariff for the conveyance of all sorts of grain, of potatoes, pulse, and other articles of alimentation; and it has now done so in order to enable such things to be conveyed as cheaply as possible to the parts of France where the failure of the harvest is most severely felt. It is probable the other companies will adopt a similar measure.

In the St Etienne journals there is an announcement of the discovery of a new bed of coal twenty feet thick in one of the pits near that town; and it is described as of "immense importance." In fact, if these journals do not exaggerate, it is one of the most important events in connection with the Loire trade which has occurred for years. New beds of coal have also, it appears, been found in the valley of La Canche, in the vicinity of Arras, north of of France. Doubtless, we are destined to hear of many discoveries

of coal in this country, for the commercial treaty with England, by admitting English coal, will compel French pit-owners to be more enterprising and energetic than they have hitherto been.

The Eastern Railway Company has addressed a letter to the newspapers, contradicting certain malicious reports spread on the Bourse to the effect that, in order to increase the revenue of the main line, certain receipts of the branch lines have been improperly used.

Annexed is an account of the markets :—

Flour at *Paris* has made a new advance, the quotations yesterday having been 62f to 64f and 65f the sack of 159 kilogs. In four marks business, yesterday, was active, and prices firm at 61f to 61f 75c, and even 62f for the current month; 61f 50c for December. At a public sale, 3,000 sacks of flour went at 58f to 63f 50c.

Wheat.—At *Paris*, yesterday, the offers were not large, and an advance demanded was not consented to: the quotation was 35f 50c to 37f and 37f 50c the sack of 120 kilogs. In the provincial markets there has been in 29 a rise of from 20c to 1f the hectolitre, in 48 a fall of from 20c to 1f 34c, 50 have undergone no change, and 27 are reported firm.

Cotton.—Business at *Havre*, last week, was unusually important, the sales having amounted to not less than 30,222 bales. The arrivals were only 3,545 bales. Prices rose considerably; those of the "very low" qualities as much as 4f to 5f the 50 kilogs; of the "low," 4f; the "very ordinary," 3f to 5f; the "ordinary," 4f to 5f; and other qualities, 5f to 6f. Low New Orleans was consequently 92f, and very ordinary ditto 99f. This week, business has been unimportant, and prices less firm.

Coffee.—At *Havre*, in the week ending Friday, a lot of 3,446 sacks Manilla expected were sold at, it is said, 111f the 50 kilogs duty paid; 120 sacks Hayti, disposable, 79f in bond; 300 sacks Rio, not washed, 76f 50c. Various lots of damaged Hayti, Cape, and Malabar were also disposed of. The arrivals of the week exceeded 2,100 sacks. This week, Guadeloupe has been at 137f 50c, and there have been some sales of Rio. At *Bordeaux*, last week, business was not active: about 1,000 sacks Rio, not washed, 79f 50c; 435 ditto, washed, different prices. This week, some Rio has been sold, but prices are not stated. At *Nantes*, last week, nothing was done. This week, two lots of Malabar have been sold, one at 110f, the other at prices not given. At *Marseilles*, last week, 3,800 sacks Rio, ordinary quality, went at 72f for delivery; and 400 ditto, same quality, 71f 50c; 700 ditto, better quality, 74f to 77f.

Sugar.—At *Havre*, in the first part of the week ending Friday, business was slack, but owing to news from the Southern departments and from England it was active in the latter part. The total sales consisted of 2,050 casks French West India at 49f 50c to 49f 75c duty paid; 142 ditto at 50f; a small lot of San Jago in bond, 48f; and one of Havana, 37f. The arrivals were about 3,600 casks. This week, various lots of French West India have been taken, the greater part at 50f, the rest at 50f 50c. At *Bordeaux*, last week, 500 casks French West India went at 48f 50c to 49f the 50 kilogs; 60 ditto usine, 54f; upwards of 500 bales Reunion, ordinary quality at established prices; 900 casks Havana at prices not stated; and a small lot of Mauritius. This week, a small lot of French West India has been sold at 49f, and another at 50f 75c. At *Nantes*, last week, 2,000 Reunion went at 51f 75c; a small lot of Java, 51f; 1,340 casks French West India, 48f 50c to 49; upwards of 1,000 sacks Mayotte, common quality, for England, 38f 35c. This week, various sales have been made: Reunion 48f to 52f, Mayotte 45f, Mauritius 52f 50c, French West India, common, 43f 75c. At *Marseilles*, last week, nothing was done.

Indigo.—At *Havre*, in the week ending Friday, 24 cases Bengal were sold at 25c to 30c below the estimates. This week, only 4 cases of Bengal have been sold, and the prices are not given. At *Bordeaux*, last week, the sales and quotations were 3 cases Bengal, 12f 50c to 25f 50c the kilogramme; 29 Kurpah, 10f to 21f; 8 Madras, 6f to 13f; 9 Caragua, 7f to 18f. This week, some Bengal and some Vellore have been sold, but prices are not mentioned.

Hides.—At *Havre*, in the week ending Friday, a cargo of 3,792 Rio Janeiro salted was taken at 62f 50c the 50 kilogs duty paid; 900 Monte Video dry, 135f to 137f 50c; 592 Buenos Ayres salted, 83f 50c; 2,455 horse, Monte Video salted, 100f to 102f 50c the 100 kilogs duty paid. The arrivals were unimportant. This week, business has been dull: Pernambuco salted, 96f; Monte Video salted cow about 73f 50c. Buenos Ayres salted cow prices not stated.

Wool.—At *Havre*, in the week ending Friday, the only business transacted was the two public sales by auction mentioned in last week's Economist. 4,472 bales were offered, but of the monly 1,753 were sold: those withdrawn, however, being for the most part of indifferent quality. The Monte Video went at about the same quotations as at the sale in July, but the Buenos Ayres were 5 to 10 per cent. lower: sheep skins, though of ordinary quality, obtained high prices. This week, Buenos Ayres unwashed, has been 1f 25c to 2f 25c the kilog.

Tallow.—No sales were made at *Havre* in the week ending Friday, and the only arrivals were 25 casks from St. Petersburg. Nothing done this week. At *Paris*, yesterday, the 100 kilogs were 140f 50c French, 146f Russian.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial letter from Calcutta, dated the 21st September, says:—The anticipations previously expressed that the import market would return to its former inactive state have been fully realised. Immediately after the departure of the last steamer, accounts of rain having fallen in some quarters of the North-west, and a better demand for the favourite marks of 8 lb and 8-8 lb shirtings from Mirzapore and Furruckabad caused a rise in those qualities of about 2 annas; this improvement did not extend however to the heavier qualities generally, nor to 45 or 54-inch shirtings, and it has since been lost. Holders continued rather firm during the first week under the influence of these better accounts, but repeated attempts to clear off quantities by public auction have so much shaken the confidence of dealers that the market is very nearly as dull as at the worst period. It is difficult to say when an improvement can be expected; the holidays are now fast approaching, and business will probably be unimportant for the fortnight preceding: no reduction of stocks must therefore be looked for between this and November. The accounts of the crops in Lower Bengal are favourable, and the fact of rain having fallen in the North-west promises better accounts from that quarter. Linseed—The demand has continued with greater eagerness on the part of the shippers, and the supply not being adequate during the first ten days of the fortnight the advance has been fully 4 to 5 annas; latterly the demand has moderated, and the market closes firm at the advance. Rapeseed also has attracted more attention, and prices have advanced fully 4 to 6 annas since our last impression. Jute—The supply still continues very moderate, and the new as it arrives is taken eagerly by shippers, at an advance of 1 to 2 annas upon our last quotations. Saltpetre—Some considerable purchases have been made during the fortnight without change of price, and the market closes firm at our quotations. Silk—No transactions in European filatures, but about 250 to 300 maunds of native have changed hands during the fortnight, at a reduction of 2 to 2-8 rs from the highest rates of June. Corahs neglected, the stock insignificant, but it will soon be increased by some considerable quantities reported on the way.

A letter from Bombay, dated October 11, says:—We are happy to be able to advise the commencement of a more animated demand for cotton manufactures since the last mail left, while a more cheerful tone has pervaded the market generally. At the same time the low prices ruling for nearly all imports are such as admit of no profitable business, and a considerable advance must take place before the goods arriving can be placed at paying rates. The accounts from the interior are less unfavourable from some districts than had previously been the case, and we are now led to hope that, on the whole, average crops may be looked for in this part of India. Money is still as abundant as ever, and the cash balance in the Bank of Bombay exceeds two crores of rupees. Government securities have been rather more inquired for, and a slight advance on our last quotations has occurred, the closing rate being 85½ for Fours, 97¼ to 97⅜ for Five, and 102½ to 102¾ per cent. for Five-and-a-Half per Cent paper.

The annexed return shows the imports of foreign dry goods at New York for nine months from January 1st:—

Dollars ....pcs. 121,000	121,000	0
Total coinage	131,000	0

The returns from the Irish banks of issue for the four weeks ending the 20th of October exhibit a large augmentation in the circulation. The increase extends, without exception, to every one of the banks. This will be seen by contrasting the present returns with those of September:—

	Average Circulation for four weeks, ending Sept. 22, 1860.	Oct. 20, 1860.
	£	£
Bank of Ireland	3,001,800	3,176 500
Provincial Bank	983,127	1,067,860
Belfast Bank	389,946	427,455
Northern Bank	267,643	295,439
Ulster Bank	396,856	444,207
National Bank	1,136,705	1,289,868

At this period of last year the entire increase was 640,000*l*, and in 1858 it reached the very large sum of 770,000. The following figures will show the position of the Irish banks in the aggregate now, and at the same period of the two preceding years:—

Four weeks ending	Average Circulation.	Average Coin held.
	£	£
October 23, 1858	6,690,882	2,455,761
— 22, 1859	7,254,333	2,378,924
— 20, 1860	6,701,329	2,277,878

With a continued active demand from the shipper, the spinner, and the speculator, the market since Friday has been very buoyant at steadily enhancing rates. The transactions for the three days comprise 12,000 bales, about half in transit, closing firmly yesterday at our revised quotations annexed. We quote:—

NEW YORK CLASSIFICATION.

	Uplands.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	8	8	8	8¼
Good ordinary	9	9	9¼	9¼
Middling	11¼	11¼	11½	12⅛
Good middling	12⅛	12⅛	13	13⅛
Middling fair	12⅝	13	13¼	14

The arrivals have been from New Orleans, 584 bales; Georgia, 3,025; South Carolina, 1,429; North Carolina, 17; Virginia, 476; Baltimore, 260; Philadelphia, 10—total, 5,811 bales. Total import since 1st inst., 26,206 bales. Total import since 1st September, 46,959 bales. Export from 1st to 23rd October, 16,955 bales, against 11,689 in 1859.

The sales of cotton have again been large this week, but the trade have scarcely bought their usual supply. In the early part the market was much excited, and some large random purchases were made by speculators, and at prices varying from ⅛d to ¼d per lb above our last quotations. Owing to some disappointment in the American news, the market became quieter, and prices settled down almost to the level of last week. Yesterday, however, there was more firmness, and many of our quotations have to be raised. Longstapled descriptions hold their ground well, but do not advance. East India are ⅛d to ¼d per lb dearer. The sales to-day are fully 12,000 bales. The market is firm in tone. The reported export amounts to 7,750 bales, consisting of 1,910 American, 130 Brazil, and 5,710 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Advices from the manufacturing districts, this week, state that there has been an improved demand for cotton goods for shipment both to India and China; and that, in some instances, prices have had an upward tendency. The continental trade, almost generally, is healthy; and the transactions for shipment to the United States have somewhat increased. The home trade is dull, and no accumulation of goods is apparent in the warehouses. Iron has commanded rather more attention, and coals still continue to advance in price.

MANCHESTER, Nov. 8.—At the end of last week the animation in cotton gave support to our market, and a large business was done here on Saturday, principally for China. Since then our market has been sensibly quieter, and the amount of business limited. Not only have the most recent China news been viewed less favourably, but the latest accounts from Calcutta to the 10th ult. have been extremely discouraging to shippers; and the change in the Bank rate to-day, though mostly expected, has certainly added to the caution of Eastern merchants. Prices, however, are upheld by the contracts in hand, especially in yarns; and as respects cloths, by the common absence of remuneration in prevailing rates.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

BRADFORD.—A better inquiry for all classes of wool is generally reported this morning, and more sales have been made, at full prices—in some instances, we hear, even at a slight advance. Things are still very flat in the yarn market, but it partakes a little of the improved feeling of wool, and spinners meet with rather more orders, especially for home consumption. A little more confidence, perhaps, is manifest in the piece market. The Americans, though moving a little, are buying with great care.

LEEDS.—The tone of the market was rather firmer; an opinion prevails that prices have seen their lowest point; the limited quantity of Sydney wool announced for the coming sales at London favouring that opinion.

ROCHDALE.—There is no change in the flannel trade. The demand continues dull. Prices are generally firm. For Yorkshire goods there is still but a poor demand, yet prices are well maintained.

HALIFAX.—Generally speaking the textile manufactures of this district remain without any material alteration since last week. Both the worsted and carpet trades are rather dull. Wools are slightly easier, but staplers are not eager sellers, except at about late rates.

LEICESTER.—The hosiery trade continues in a satisfactory condition, and business generally has a healthy tone. In the country districts of Loughborough and Hinckley trade is improving, and the operatives, both in town and country, are rather better employed. Wools remain firm and high in price. There is no important change in the price of yarns, spinners making full time.

NOTTINGHAM.—The lace trade has been very quiet this week, and much less than an average business is doing at the warehouses. Yarns are without material change in price. At a meeting of the lacemakers on Saturday, it was stated that the strikes which had been pending in the Mechlin branch for four months had terminated.

HUDDERSFIELD.—We have again had a quiet market, buyers having purchased very sparingly. Stocks of goods of all kinds, but more especially of blacks, mixtures, and other plain goods in the hands of manufacturers are evidently increasing, although not more rapidly than is usual at this late period of the season. The warehouses have been very quiet, few buyers, and those of small importance, having been in the market.

BELFAST.—Flax—The demand was active in the markets of the county Armagh district. In Cookstown prices ruled about 4d per stone higher than at previous market. In Strabane, notwithstanding the quality being in general very poor, and the cleaning most defective, all flax offered was quickly bought up at an advance of 2l to 3l per ton. A similar advance took place in the Derry market. An active demand has prevailed in yarns, and a large business for home consumption has been recorded. Transactions on export account have been rather more numerous. Stocks are decreasing, and prices firm.

WOLVERHAMPTON.—The iron trade is far from active, at last week's prices.

TO READERS AND CORRESPONDENTS.

Communications must be authenticated by the name of the writer.

T. L. P. (Leeds.)—The weekly returns refer to the various ports in ENGLAND only; but the monthly tables embrace the imports for the whole of the UNITED KINGDOM; hence, the wide difference in the totals referred to by our correspondent.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 7th day of November, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	27,635,440	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	13,160,440
		Silver Bullion	...
	27,635,440		27,635,440

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,490,273
Rest	3,168,580	Other Securities	18,968,649
Public Deposits, including Exchequer, Savings Banks, Commissioners of National Debt, and Dividend Accounts	4,968,172	Notes	6,429,370
		Gold and Silver Coin	736,345
Other Deposits	13,114,251		
Seven Day and other Bills	820,934		
	36,624,937		36,624,937

Dated the 8th November, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,027,004	Securities	29,380,922
Public Deposits	4,968,172	Coin and Bullion	13,897,085
Private Deposits	13,114,251		
	40,109,427		43,278,007

The balance of Assets above Liabilities being 3,168,580*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£239,161
An INCREASE of Public Deposits of	811,863
A DECREASE of Other Deposits of	622,682
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	210,423
A DECREASE of Bullion of	230,788
An INCREASE of Rest of	29,615
An INCREASE of Reserve of	66,572

The present Bank return still continues unfavourable, inasmuch as the drain of gold continues, and shows a diminution of 230,788*l*, and the other securities have increased 210,423*l*, doubtless in anticipation of the Bank raising the rate. The other fluctuations do not indicate any change worthy of comment.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,594,695	£ 21,036,430	£ 21,826,785	£ 22,692,969	£ 22,027,004
Public deposits	7,502,189	5,314,659	6,673,581	6,097,259	4,968,172
Other deposits	9,718,433	12,935,344	12,290,682	14,311,201	13,114,251
Government securities	14,228,001	9,444 828	10,808,591	10,875,157	9,490,273
Other securities	10,980 140	26,113 453	14,697,722	18 649,373	19,968,649
Reserve of notes & coin	10,831,486	1,462,153	11,088,792	9,500,693	7,166,015

Bank rate of discount	2½ p. c.	10 p. c.	3 p. c.	2½ p. c.	4½ p. c.
Price of Consols	97	90	98⅞	96⅞	96⅝
Average price of wheat	40s 5d	52s 6d	42s 8d	42s 9d	59s 9d
Exchange on Paris (short)	25 12½ 20	25 35 45	25 5 12½	25 7½ 12½	25 15 22½
— Amsterdam ditto	11 16½ ⅝	11 17 18	11 15	11 13 14	11 14½ 15
— Hamburg (3 months)	13 7¾ 8	13 13 14	13 7	13 5 5½	13 5¾ 6¼

In 1850, there were rumours of war, which occasioned heaviness in the funds, and the large armaments which were taking place abroad excited uneasiness. Money was becoming tighter, in consequence of the great expansion of our trade caused by the discovery of gold.

In 1857, the panic was at its height. It was on Thursday, the 12th November, the day following the stoppage of Messrs Sanderson, Sandeman, and Co., the great bill-discounters, that the Government letter, authorising the relaxation of the Act of 1844, was issued. The pressure for money at the Bank was unparalleled in the history of the establishment, the other securities reaching 26 millions, and presenting an increase of 3½ millions within a week. Exchequer Bills were offered at 2 per cent. discount, without finding purchasers; yet large investments were being made in the funds by the public, and Consols were consequently supported at about 90, notwithstanding the enormous sales by the banking interest, including the Bank of England. The Russian 4½ per Cents. had fallen to 95, and the Turkish 6 per Cent. Loan of 1854 to 87.

In 1858, a favourable impression was engendered by rumours of an approaching reduction in the French army. Payments of the Turkish and Indian loans were in progress, but had little effect on the money market. The bullion in the Bank was more than 11 millions in excess of the amount held at the corresponding period of 1857, whilst the reserve showed an increase of 10½ millions, and the "other" securities a decrease of 11½ millions.

In 1859, notwithstanding the enormous shipments of silver to the East, amounting to 18,234,305*l*, the rate of money had not exceeded 3 per cent. throughout the year. Money was very easy in the discount market at 2½ per cent., and the public continued steadily to invest in Indian securities.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,261,707*l*; in 1857, a deficiency of 13,178,109*l*; in 1858, a deficiency of 2,407,040*l*; and in 1859, a deficiency of 4,338,172*l*. In 1860, the deficiency is 6,021,293*l*.

DISCOUNT AND MONEY MARKET.—The most important feature of the week has been the rise in the rate of discount by the Bank of England from 4 to 4½ per cent. Since the 26th of September there has been week by week a steady drain of gold from the Bank, until it has reached in the aggregate 2,358,866*l*, including the present week's return. The object of the Bank, therefore, in raising the rate, has clearly been to check this drain, for money is plentiful in the market, but still the gold leaves the Bank, notwithstanding the rate of discount is higher in London than in Paris, Amsterdam, Brussels, and Hamburg; and, moreover, that the export of gold leaves no profit as an exchange operation. Still it is exported, some say to Egypt, some to Spain. Others affirm, however appearances may be to the contrary, that the real purchaser is the Bank of France. In confirmation of of this view, the *Moniteur* publishes the usual monthly return of the Bank of France, which shows the following results as compared with the October account:—

DECREASE.	£
Cash	1,013,000
Current accounts	130,000
INCREASE.	£
Bank notes	360,000
Treasury balance	600,000
Bills discounted, not yet due	1,800,000
Advances	80,000

It will be observed that, notwithstanding the amount of gold purchased in this country, the Bank of France has lost since the return in August 1,013,000*l* gold, which, added to the deficiency in August, amounts together to 3,853,000*l*; and at the same time the increase in the bills discounted amounts for the two months to 2,960,000*l*. Now, it is perfectly clear that the course the Bank of France ought to adopt is to raise the rate of discount, and this in all probability will shortly take place, for it is not likely that the rate will remain in England at 4½ per cent. while in Paris it is only 3½ per cent. But, on the other hand, it has been the custom of the Bank of France, rather than disturb the money, to purchase gold at a loss; and this operation possibly has been going on, and will continue to do so for some time. At present the rise in the rate has not checked the export of gold, for 43,000*l* was taken from the Bank yesterday, although it is said it was ordered before the Bank raised the rate. To-day no *bullion* has been taken from the Issue Department of the Bank, but a considerable quantity in sovereigns has been taken from the *Banking* Department; and it is to be regretted that in times like the present the Bank do not furnish the daily export or import of sovereigns withdrawn from the Banking as well as those drawn from the Issue Department; for we need only refer to the present Bank returns to show how fallacious the merely publishing the gold taken from the Issue Department may be, for according to the returns of export which have been daily communicated to the press as amounting to 90,000*l*, in fact turn out to be 227,110*l*.

The demand for discount during the week has been active, especially at the Bank of England, in anticipation of a rise in the rate of discount. In Lombard street in the early part of the week, money was abundant, and first-

class bills at short dates were freely discounted at 3¾ and ⅞ per cent. The rise in the rate of discount by the Bank has caused a rise in the rate allowed by the Joint Stock Banks on deposits to 3½ per cent. The discount houses allow 3½ per cent. on call, and 3¾ at seven days' notice. We do not for one moment doubt the wisdom of the Bank of England in raising the rate of discount, but for the present we fear it will not check the export of gold, for although no *bullion* was taken from the Bank to-day—from the Issue Department—coin was to the extent of 30,000*l*, and more will follow to-morrow and next week. The bullion by the Swiftsure will be delivered to-morrow and exported. Money in the Stock Exchange is very abundant at 2 to 2½ per cent.

The following are the rates of discount on the Continent, but there is decidedly a greater demand springing up, and we expect next week to see a rise in some of the rates.

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	3½	3
Amsterdam	3	3
Hamburg	No Bank rate	2¼
Brussels	3	3
Frankfort	2	1½
London	4½	3¾
St Petersburg	5	5½
Vienna	5½	5½

English Funds.—The monthly settlement of the Consol account took place yesterday, and it is evident that the floating stock had been absorbed, as the continuation from account to account receded from ¼ to 1-16 to ⅛; and, notwithstanding the raising of the rate of discount by the Bank, Consols improved fully ¼ per cent., viz., from 93 to ⅛ to 93⅛ to ⅜ for money, and 93⅜ to ½ for the December account, at which prices they close this afternoon. New Three per Cents. and Reduced have been heavy; and whereas the rate of money has only been 2 per cent. on Consols, it is 3 per cent. on the New Three per Cents. and Reduced, which close this afternoon at 91⅛ ¾.

The last price of French funds this afternoon is 70f 10c, after having been 70f 30c.

Foreign Funds.—Nothing further has transpired relative to the New Turkish Loan, which is stated to have been contracted for by M. Mirès, of Paris, and other French capitalists. Report fixes the amount at 16,000,000*l* of 6 per cent bonds at the rate of 50*l*, and it is expected that about 4,000,000*l* of domestic debt will be redeemed by the operation. This would account for the great rise that has taken place in that debt at Constantinople. Of course if contractors can purchase the domestic debt at a very depreciated value, and exchange it for a marketable one at Paris or in London, or receive payment for it from the proceeds of the loan, it is a very profitable transaction; but this operation depends entirely on the success of placing the bonds of the new loan; and the utmost circumspection will be used by English capitalists before they make further advances to Turkey on terms which cannot be otherwise than ruinous to her financial position, and, ultimately, to her creditors. There is but one way of restoring the credit of Turkey, and that is by bringing about an equilibrium in her finances, by curtailing expenditure on the one hand, and raising the revenue on the other; and this could be easily effected if the Turkish Government would seriously take in hand the reforms necessary for that purpose. Those who wish well to Turkey will give no countenance to loans raised on such terms as M. Mirès is stated to have contracted this new loan. Turkish Bonds, which closed last week at 58 to ½, receded to 57¼, and close this afternoon at 57⅜ to ½. Connected with these financial operations, there has been a considerable run to-day on the shares of the Bank of Turkey, which have risen from 1¼ discount to ¾.

There has been a severe depression in American securities, caused by intelligence of a heavy fall in New York equal to about 10 per cent. According to the previous mail, Erie had declined to 35¾, and it is now at 27½. Illinois Central have fallen from 77½ to 70⅝, and New York Central from 84¼ to 80½. The intelligence has produced a corresponding movement on this side, but it is believed that there is little to account for it beyond the speculative action of a number of combined operators who have long been working for a rise, and are now turning in the opposite direction. In other foreign securities no alteration of any consequence has occurred.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

	Consols Money Account. Lowest.	Highest.	Lowest.	Highest	Exchequer Bills.

Bullion.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes:—

Gold.—The Swiftsure, with 282,500*l*, has arrived from Melbourne; this amount has already been purchased, and when deliverable, will be sent away. The Vanderbilt has brought 31,000*l* from New York, and the Oneida 27,496*l* from the Brazils, and these sums, with about 90,000*l* withdrawn from the Bank during the past week, have also been taken for the Continent. The demand is still active, and further applications will soon be made to the Bank. The Atrato has taken 6,000*l* to the West Indies, and the Ripon 10,891*l* for Alexandria and Madras.

Silver.—The bar silver per Scine has not yet been sold. There is but little doing, and very few orders for the East. We quote the price as about 61⅛d per ounce, with a quiet market. The Ripon, which left Southampton on the 4th inst., took out 142,971*l* in silver and dollars for India and China.

Mexican Dollars.—The dollars ex Scine have been sold at 62¼d per ounce. There is not, however, much demand for China, and we quote the same price, with a rather dull market.

Exchange on India is unaltered. Bank drafts, at sixty days' sight, on Bombay and Calcutta, are 2*s* to 2*s* 0¼d; Madras, 2*s*; bills, with documents, 1*s* 11½d.

India Government Loan Notes are very quiet, and prices are nominal. We quote 5 per Cents. 95 to 95½, and 5½ per Cents. 101 to 101½. Accounts from Bombay to hand this morning report rather better prices.

Quotations for Bullion.—Gold—Bar gold, 77*s* 10d per oz std; bar gold, fine, 77*s* 10d per oz std; bar gold refinable, 78*s* 1d per oz

std; Spanish doubloons, 76s 3d to 76s 6d per oz, last price; South American doubloons, 74s 6d per oz, last price; United States gold coin, 76s 4d per oz, last price. Silver—Bar silver, containing 5 grs gold, 5s 1¼d per oz std; fine cake silver, 5s 6¾d per oz; Mexican dollars, 5s 2¼d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price.

Messrs Pixley and Co. have informed us that the price fixed for the bar silver ex Seine is 61⅝d.

FAILURES.—The chairman of the committee of creditors of Messrs Robert Davies and Co., bankers, of Shoreditch, has issued a notice earnestly requesting creditors to attend and prove their debts without delay at the offices of Messrs J. and J. H. Linklater and Hackwood.

In the Bankruptcy Court, the examination meeting in the case of Messrs Johnson and Gilman, boot and shoe manufacturers, of Red Cross street and Norwich, was adjourned until the 10th of January, the accounts being unsatisfactory. An adjournment for a month was also ordered in respect of the examination of Mr Thomas Ryder, merchant, of Leadenhall street, who owes 54,583*l* to creditors holding security, besides 7,149*l* to others who are unsecured.

The bills of Mr Spencer P. Pennell, merchant, of Liverpool, have been returned. The liabilities are understood to be limited.

In the Bankruptcy Court, a further adjournment was ordered in respect to the examination meeting of Mr John Dales, contractor and shipper, of Gresham House, no accounts having been filed. The bankrupt shows liabilities to the extent of 45,000*l*, whilst his assets are estimated at 10s in the pound or upwards.

An immediate certificate of the second class was awarded to Mr Charles Cross, silk warehouseman, of Gutter lane, the Commissioner considering that the bankrupt had not carried on any systematic dealing in accommodation bills.

Messrs Thornton, Ward, and Co., American merchants at Manchester, from whom a compromise of 15s in the pound was accepted in 1857, voluntarily paid the additional 5s on the 3rd inst., and have thus discharged the whole of their obligations in full.

In the Bankruptcy Court an adjudication was made against Mr John Baker, tanner and farmer, of Heathfield, Sussex, whose liabilities are 16,000*l*, and assets about 4,000*l*. Immediate certificates, but only of the third class, were awarded to Messrs Bell and Brassert, silk-fringe importers, of Goldsmith street, who owe 24,822*l*, and have been ruined by setting up as manufacturers and erecting machinery with borrowed money. A further adjournment took place in the case of Messrs Smith, Patient, and Smith, tanners, and in that of Messrs Gandell and Co., merchants, of Upper Thames street, who owe 24,130*l*, against assets amounting to 17,892*l*. In the latter case the examination was adjourned *sine die*, without protection, after three weeks have expired, thus allowing the bankrupts to appeal.

MISCELLANEOUS.—A Parliamentary return of very considerable public interest has been issued upon the subject of the railways of the United Kingdom, showing the amount of their capital authorised, the amount actually raised or paid up in the different classes of securities, and the amount of loans outstanding, the whole brought down to the 31st of December, 1859. From this return we learn that the total amount of capital authorised to be raised up to the close of last year was 383,716,351*l*, against 346,408,287*l* in 1858; increase, 37,308,064*l*. Total capital actually paid up to the date mentioned 334,362,928*l*, against 308,824,851*l* in 1858, being an increase of 25,538,077*l*. The respective classes of capital in each year we compute as follows:—

CAPITAL AUTHORISED.

£		£
1858 346,408,287	1859	383,716,351

CAPITAL RAISED.

	1858 £		1859 £
Ordinary shares	165,379,575	.....	184,560,019
Preference and guaranteed	65,401,316	.....	63,555,179
Debenture stock and funded debt	...	.....	5,619,614
Loans.....	78,043,960	.....	80,628,116
Total	308,824,851	.....	334,362,928

Of the capital authorised to be raised last year, 285,434,181*l* was by shares, and 98,282,170*l* by loan. These statistics relate to 289 railway companies or their branches. There were also 37 lines which were afterwards abandoned, with an authorised capital, in addition to the above, of 16,028,928*l*, of which 1,072,143*l* was actually raised. This makes the gross amount of capital authorised on all railways, whether abandoned or carried forward, 399,745,279*l*, and the gross total actually raised 335,435,071*l*. It further appears that the number of miles of line of railway authorised, but whose limit for the purchase of land expired prior to the 31st of December, 1859, amounted to 2,545 miles, representing a capital appropriated for their construction of 41,117,954*l*.

A few weeks since the resignation of Mr Pasquali was announced as manager of the Bank of Egypt at Alexandria. We are now informed that, by the good offices of the Deputy Chairman, who has been in Egypt on the affairs of the Bank, Mr Charles Thurburn, the eminent merchant of Alexandria, has undertaken the important office of Managing Director in Egypt. From the eligibility of this selection, satisfactory inferences may be drawn relative to the condition of the affairs of the Bank in Egypt.

The following communication from the Great Western Railway Company of Canada have been posted up in the Stock Exchange:—

Great Western Railway of Canada, Gresham House,
Old Broad street, London, E.C., Nov. 7.

Sir,—As some misapprehension appears to exist as to the amount of renewals of permanent way stated to be required in the report just issued, I am desired to inform you that the estimate made by Mr Reid, our engineer, for the renewal of the permanent way, bridges, and fences, during the next five years from Feb. 1, 1861, at the rate of say 72,000*l* a year, is the total estimate likely to be required for that purpose.

For the current half-year, as stated at page 27 of the report, the renewals will be about the same as for the past half-year.—I am, dear Sir, yours truly, BRACKSTONE BAKER, Secretary.

Mihill Slaughter, Esq., Secretary, Stock Exchange.

The Tribunal of Commerce at Rheims has just prohibited a newly-formed firm, one of the partners in which is named Ruinart, from carrying on business under the style of "Ruinart et Cie.," an old house largely engaged in the wine trade, with a branch in London. The Tribunal condemned the defendants in 10,000f damages. The French law against appropriating trade titles and trade marks appears to be preferable to our own, inasmuch as it is much stricter.

With reference to the market for American securities, Mr E. F. Satterthwaite reports as follows:—

A considerable business has been done in London since our last in American securities. The fall in Illinois and Erie shares, reported from New York, caused a sudden drop here of 4 per cent. in each of them, on which large buyers appeared, and the market has assumed a firmer aspect. The market for States stocks and railroad bonds remains steady. We would draw the particular attention of our friends who hold Illinois Central Options, expiring February, 1861, to the fact that the certificates must be in New York by December 1 to obtain the extension privilege, otherwise the present options will become valueless.

The following is a summary of the advices from Buenos Ayres by the last packet, which appear to be of a highly satisfactory character:—

By the last Buenos Ayres mail, letters have been received from Parana of the 17th September. Signor de la Riestra was occupied with a thorough reform of the finances with the support and approbation of all parties. He had already obtained a considerable reduction in the high custom house tariff down to the level of that of Buenos Ayres, so as to establish uniform rates of duties in the whole Republic. The revenue for 1861 was estimated at 93,425,000 dols, and the expenditure (including the addition for 1861 on the English deferred debt) at 90,815,000 dols., which would leave a surplus of 2,610,000 dols.

The Directors of the London Discount Company invite a general meeting of the shareholders for the 20th inst., to take their sense upon the question of the expediency of winding up the undertaking "voluntarily," and of appointing liquidators. To a statement of accounts issued by the Board the following note is attached:—

A requisition having been presented to the Board by a large number of shareholders, requesting that the Company may be wound up, the accompanying statement of affairs has been made up the latest date (viz., the 31st of October), to enable every shareholder to see the actual position of the Company.

The accounts, which will be regarded with interest, are given below. Assuming that the estimate of 25,000*l* for loss on overdue bills is accurate, the Company would appear to be losers, on balance, to the extent of only about 7,000*l* upon their operations thus far. This result may be dis-

couraging, yet indicates that the management has not been characterised by want of caution :—

LONDON DISCOUNT COMPANY, LIMITED.
Balance Sheet, 31st October, 1860.

By office furniture and fixtures	1,524	3	0
	2,164,636	2	5

This balance sheet was prepared in the Secretary's office, under the supervision of Mr Turquand, the auditor and eminent accountant.

A meeting of the share and bondholders of the Grand Trunk of Canada Railway has been held at Liverpool to hear the report of Mr C. H. Chapman, who has just returned from the colony, which reflected very severely on the management in Canada and on the Canadian Board. At the conclusion of the meeting the following resolution was passed :—"That Messrs T. E. Moss, E. Fenton, S. J. Arnold, Robert Dagleish, and George M'Corquodale be appointed a Committee to make a searching investigation into the present state of the Company, and to co-operate with the London and other Committees, and to suggest and report means of reorganising the entire management of the Company in Canada; and, pending their action and report, this meeting deprecates any premature or legal proceedings on the part of any section of share or bondholders."

From Japan an official notification has appeared that no foreigner shall reside in Japan who is not represented by a Consul. The Portuguese Government had concluded a treaty of commerce with the Japanese on the 3rd of August last, to come into operation on the 1st of October last. Trade continued to be impeded by the authoritles extorting 40 per cent. upon the currency.

Notice has been given that 457 special bonds of the Danish 3 per Cent. Loan, amounting to the sum of 65,100*l* have been redeemed and cancelled.

A prospectus has been issued of a cotton company organised in Manchester, with a proposed capital of 100,000*l*, in shares of 100*l* each. The Board of Directors comprises Mr Thomas Bazley, M.P., chairman; and Messrs John Cheetham, Edmund Ashworth, John Platt, Hugh Mason, James Marshall, Thomas Emmott, E. C. Howard, Robert Platt, Harold Littledale, Thomas Barton, and Frederick Stenier. The object is primarily to develop the cotton field of Dharwar, in the Bombay Presidency, the quality produced there from American seed being considered very good, although little reaches this country, as it is invariably used by the native dealers to mix with the coarse and indigenous kinds. Purchases will be made direct from the grower, and it will then be effectively cleaned, pressed, and packed for shipment, great reliance being placed upon the result of the introduction of the best machinery for these processes.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about 2 per mille premium, and the short exchange on London is 25.15 per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 424¾ per mark, and the short exchange on London is 13.4 per 1*l* sterling. Standard gold at the English Mint price is, therefore, 4-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Very few samples of English wheat were exhibited at Mark lane to-day; nevertheless both red and white qualities moved off slowly at barely Monday's currency. Foreign wheat was in good supply, and heavy request. To have forced sales, lower rates must have been submitted to. Most descriptoins of spring corn were firm in price; but the demand for flour, both English and foreign, was much restricted. Large supplies of produce have arrived from abroad this week, viz., 56,820 quarters of wheat; 6,350 barley; 49,830 oats; 2,420 sacks and 210 barrels of flour.

At Liverpool, this morning, wheat declined 2d per cental; flour 6d per sack and barrel, at which very little business was transacted.

"The general tendency of our grain market," write Messrs Briggs and Co. of Alexandria, "has been towards higher rates, but the restriction to business caused by the continued and excessive scarcity of money has strongly contributed to check any decided upward movement. When however sales are made from store, and facilities offered for payment, higher rates have been readily paid. Linseed is scarce, and very firm. The following are transactions since our last, with present value free on board:—Wheat—Saide, private trade produce, 10,800 qrs, 35s 6d to 36s 6d; ditto, Pacha's produce, 3,750 qrs, 37s 4d; Behira, private trade, red, 2,650 qrs, 34s to 34s 6d; ditto, white, 630 qrs, 35s 9d to 36s; ditto, Pacha's produce, 625 qrs, 35s 9d to 36s 3d: beans—Saide, 5,520 qrs, 26s to 26s 6d; Behira, 200 qrs, 24s to 24s 6d: barley, 470 qrs, 22s 6d to 22s 9d; lentils, 25s to 25s 6d; peas, 90 qrs, 24s to 24s 3d; linseed, 590 qrs, 44s to 45s 6d per qr. Freights—Shipping is still very scarce and quotations firm at the following rates, viz.:—For beans to the United Kingdom for orders, 7s 3d to 7s 9d, according to class and size; other grain and seed in proportion; to a direct port, 6s 6d to 7s; by steamer to Liverpool, 8s 3d; by sailing vessel, 6s 3d to 6s 6d.

There has been again an animated demand during the week in the Liverpool cotton market, and the total sales amount to 95,500 bales, including 47,000 to spinners, 41,000 to speculators, and 7,000 bales for export. Quotations are ⅛d per lb dearer than on Friday last. Sales to-day are 10,000 bales, market closing firmly. The news received last week by the extra steamer (which steamers, by the way, it is worth remarking, are frequently selected to bring extraordinary reports, which are seldom or never confirmed by the following regular steamer which brings the official accounts,) put the Liverpool market in a state of great excitement, and a large business was done at ⅛d to ¼d per lb advance on the strength of the reports of middling cotton being quoted 12½ to 13 cents at New Orleans. As soon however as these accounts were found to be false, there was a reaction in the market, and by Tuesday the advance was again lost. The last quotation for middling at New Orleans was 11⅛ to 11½ cents, with a drooping market. It appears surprising that there should exist so strong an opinion of a short crop being in prospect, with nothing whatever to have curtailed it beyond the drought; and why from this cause alone the estimates should have been reduced within three months from 4¾-5 million bales to 3¾-4 millions, when surely from this alone the injury cannot be calculated at anything like a million bales, seems also difficult to comprehend.

The following commercial intelligence is dated Hong Kong, September 12:—

Tea—In Canton packed teas considerable eagerness has been shown by purchasers, and the market is cleared of all sound and well-conditioned parcels. The latest settlements show an advance of 2 taels on last quotations. Ningchows have continued to arrive slowly, and been taken freely, three chops only remaining on the market. Scented kinds are rather easier. Transactions for the fortnight are as follows, viz.:—Congou—Ningchow and Monings, 13 chops, at 27 to 29.2 taels. Canton packed and Tayshan, 11,000 half-chests, at, for common, 17 taels; good to fine, 19 to 24 taels. Scented orange pekoe, 23,000 boxes, at 18 to 23 taels for common to good, and 25 to 33 taels for fine to finest. Scented caper, 8,000 boxes, low spurious leaf and common, 14½ to 17 taels; fair to good, 18 to 23 taels; fine, 25 to 27 taels. Gunpowder, 7,000 boxes, chiefly low mixed spurious, at 18 to 21 taels. Young Hyson, 400 half-chests, old seasons, at 23 to 26 taels. Amoy dates are to the 31st ult. Tea—Prices are firm, and all fair quality eagerly purchased on arrival. Sales are reported as follows:—Oolong, 3,972 half-chests, at 24-75 dols to 29 dols; Congou, 100 chests, at 15 dols; orange pekoe, 280 chests, at 18 dols; Ankoi, 1,080 half-chests, at 14.50 dols to 17 dols. Foochow.—Advices are to the 30th ult. Tea—During the fortnight a good business had been done. The easier feeling last advised has continued, and a further decline has been established on the low dusty and good ordinary kinds. Sales of good common and medium are also more in favour of buyers. Arrivals have proved in excess of sales, and stocks again show a further increase. The quality of the more recent supplies is fair to good third crop teas; some few thousand chests of the lower grades are also at hand, besides some Ningchows of fair descriptions. In souchong the demand is trifling. Oolong sales are moderate, and at a decline on former quotations, the chief business being for the States. Pekoe and scented teas are in fair inquiry, and prices are somewhat easier. Present prices, as compared with those current on the 17th ult., show a decline of 1 tael on low dusty and ordinary descriptions, and 5 mace on the common to Kaisow kinds. Settlements from the 17th to the 29th August comprise—Congou, 22,820 chests, from 10.5 taels for low dusty, to 29 taels short for Kaisow; souchong, 400 chests, at 26 to 39 taels; oolong, 15,250 half-chests, from 19.5 taels for common, to 22.5 taels for fair to good; pekoe, 800 chests, at 28 to 39 taels; scented teas, 4,000 boxes, at 26.8 to 40 taels. Stock—Congou, 50,000 chests; souchong, 5,000 chests; oolong, 11,000 half-chests; pekoe, 1,500 chests; scented teas, 5,000 boxes. Shanghai advices are to the 4th inst. Silk—Settlements during the fortnight amount to 8,000 bales, making total settlement for the season 22,000 bales. Rates had been irregular, but without much change. For all Tsatlees under No. 4 a decline of 10 taels had been submitted to, but the better qualities are as last quoted. Taysaams are

5 taels lower, and show a downward tendency. Stock estimated at 2,500 to 3,000 bales The total export of silk from China to Europe is 17,631 bales, against 11,340 bales last year, or an increase for this season of 6,291 bales. Tea—Settlements have been only very trifling, and confined to low rubbish. Five chops of new Ningchow and Oopelk have arrived *via* Ningpo, and a few more are reported close at hand. Most extreme prices are asked for them. Settlements during the fortnight are as follows:—Congou, low Shanghai fired, 2,300 chests, 14½ to 16¼ taels, duty paid; Sunchunkl and Hohow, 1,000 chests, at 22½ to 26 taels; Japan, unprepared, 1,400 chests. Green Teas—20,000 packages have also arrived from Ningpo, all of Pingsury make, and sales are reported at 17,800 packages, for which rates equal to the opening prices of last season for teas of inferior makes have been paid; further supplies are reported at Ningpo. Stock estimated at—Black, 7,700 chests, against last year 40,000 chests; green, 6,200 packages, against last year 35,000 packages. The total export of tea from China to Great Britain is 18,355,200 lbs, against last year 11,058,400 lbs, or an increase for this season of 7,296,800 lbs. To the United States the export is 5,556,600 lbs, against last year 4,272,600 lbs, or an increase for this season of 1,284,000 lbs.

Raw sugars have been in improved request, at an advance in the quotations of fully 6d per cwt. There is a steady business doing in the refined market, at extreme rates.

Although large quantities of coffee have been brought forward, the trade has ruled tolerably active at last week's decline in value.

We have no change to notice in the value of any kind of rice. The demand, however, has been somewhat firmer.

Advices from Colombo, forwarded by Messrs Volkart Brothers, report the coffee trade as under:—

The disposal of the present season's crop to date, is as follows:—

PLANTATION COFFEE.

To Great Britain .....cwts	423,015	against last year, cwts		340,381
Foreign Ports	37,537	—	—	38,995
Australia and India.....	10,870	—	—	7,515
	471,422			386,891

NATIVE COFFEE.

To Great Britain.....cwts	87,859	against last year, cwts		72,643
Foreign Ports.....	68,113	—	—	117,747
Australia and India.....	3,640	—	—	7,271
	159,612			197,661

Since our last issue we have heard of sales of plantation coffee in parchment, of good growth, to the extent of thirty thousand bushels, at 11s 3d to 11s 6d per bushel. Very little of the new gathering has yet reached Colombo, but few estates being at full work. Labour is generally abundant, and the weather continues favourable for the growing crops. Parcels of the new native crop are finding their way in, differing much in quality, and causing a considerable range in quotations; but the quantities offering are as yet limited in extent. Very little of the Ouvah crop remains. Plantation coffee, low, nominal; ditto, mountain, 11s to 11s 6d per bhl; native coffee, unpicked, 42s to 43s 6d; ditto, picked and dried, 45s to 46s 6d per cwt. Cinnamon, plantation, 9½d to 10d; ditto, inferior 6d to 7½d per lb.

The fruit market has become firm, and prices have rather advanced. Messrs Witherby and Son observe:—

The total crop of currants is now generally estimated at 49,000 tons, 14,000 tons of which are the produce of Zante and Cephalonia, and 35,000 tons that of Greece. One leading house, however, gives the crop at 45,000 tons. Of these 49,000 tons, 26,000 had been shipped off to all parts before 20th October, and more than 20,000 have already reached this country; the rest had gone to Trieste, Belgium, United States, &c. The London clearances for consumption in October were 4,005 tons, against 1,492 tons in October 1859 (prices then 50s to 63s), and 2,204 in October 1858. The currant market is in a healthier state than has been the case at this period for some years past. The trade have more confidence in the article, and purchase more freely, being well met on the whole by importers. The arrivals of Valentia raisins to the 3rd instant, and to the same date of the previous year, has been—to 3rd Nov. 1860, by 24 ships, 83,477 boxes, 48,030 half-boxes, or 2,700 tons; 1859, by 44 ships, 142,130 boxes, 87,204 half-boxes, or 4,600 tons;—showing the import to this date to have fallen off in an extraordinary manner considering the crop to have been larger than that of 1859. It is now ascertained to have been about 13,500 tons, 5,250 of which had been shipped to England before the 24th of October (against 8,300 tons in 1859 to the same date), and 3,000 to the United States; 5,000 tons still in Denia.

As the public sales will commence on Thursday next, the transactions in all kinds of wool are on a limited scale, and, in some instances, English qualities have changed hands on rather lower terms. Hemp supports the late improvement, and jute has produced rather more money.

Messrs Thomas and Co., of Calcutta, writing on 22nd September, thus allude to the indigo crop:—

In Lower Bengal all manufacture is over. We still continue to receive good accounts from Tirhoot and Chupreh, and we feel confident that our estimate of those districts will be realised. From the Benares zillahs and Doab our letters are not as favourable as they were, and we have accordingly reduced our estimate of these parts to 25,000. Our present figures therefore are—Bengal, 51,800; Tirhoot and Chuprah, 30,000; Benares and Doab, 25,000—total, 1,06,800 fy. mds.

"We have to report another month of heavy dragging business in silk," observe Messrs Durant and Co. "The deliveries are somewhat better from the fact of some of our home manufacturers having decided to commence preparations for the spring, but the demand for their manufactured goods is still feeble as ever, and they are induced to begin rather from hope than any real change in their prospects. In China silk, the delay in the arrival of the last steamer, and the fear that the mail might possibly bring accounts of difficulties in Shanghai, enabled importers to realise generally an improvement of 3d for all their Tsatlee. This, however, has vanished since the receipt of the mail, the extreme smallness of the stock being looked upon as unimportant in the face of the large settlements. Chinese thrown silk remains generally without notice; a parcel or two is sold occasionally, and, in the absence of arrivals, the stock continues to diminish, but it is a slow process—the quantity looks still beyond compass. In Canton silk nothing new. In Bengal silk some little progress was made in the middle of the month, chiefly in the sizes of the filature silks, by a reduction in price, but the disposition to purchase has again subsided. In Italian, Brutia, and Persian silk, nothing.

The quantity of port wine made this year within the line of demarcation is declared by the *Arrolamento* at 25,602½ pipes. The quality is represented to be finer than that of 1858, and commands higher prices than either the 1858's or 1859's at the time of the respective vintages, having been eagerly bought up by leading houses at from 80 to 85 milreas (say 19*l*) per pipe, exclusive of brandy or casks. In some few cases 100 milreas have been paid. The *Arrolamentos* issued since 1853 were as follow:—1853, 74,000 pipes; 1854, 50,480; 1855, 26,646; 1856, 15,218; 1857, 17,695; 1858, 49,529; 1859, 17,378; 1860, 25,602.

Messrs Churchill and Sim have issued the following particulars showing the comparative stock of timber at the public docks on 1st November:—

	1860.	1859.	1858.
Foreign deals .....pieces	1,094,000	1,257,000	1,115,000
— Battens, boards, and ends...	647,000	720,000	686,000
— Fir timber .....loads	32,200	63,800	25,500
Colonial pine deals and battens..pieces	900,000	681,000	861,000
— Spruce ditto	897,000	1,093,000	620,000
— Pine timber.....loads	10,700	9,800	10,000
United States pitch pine timber	2,300	5,300	2,900
East Indian teake	3,500	7,300	11,800

Rum has maintained its previous value, and the demand for brandy has been in a healthy state.

Messrs Powell and Co. report the state of the leather trade during the past month as follows:—

The course of the leather trade during the past, has been much the same as in the previous, month. The sales of bankrupts' stocks have been considerable, and have continued to divert buyers from the more open market; there has, however, been a steady general demand, not, we think, below an average, although without any extensive operations. Prices of some articles have shown a downward tendancy, but the alterations are not important, and we may hope that when the stocks that have to be realised are cleared off, greater firmness may obtain in the value of leather. We are now approaching a season when an active trade is not the rule, but it must be remembered that the lapse of every month brings us nearer to the period when the diminution in the number of hides put into work for many months past must be felt in the way of diminished supplies of leather. In raw goods very little change has occurred, but prices have slightly receded. The importation has been ample, and of some articles the stocks have largely increased. The market has been considerably aided by a demand for exportation, but as most of the European markets are now largely supplied, it is probable that but little further assistance will be given by the continental buyers. We therefore hope that prices may shortly be more in conformity with the value of leather.

We have very few changes to report in the value of metals generally; but the market may be considered firm. The arrivals of tin at this port during October were 4,731 slabs of Straits and 750 slabs Banca, making the imports this year as follows:—

	1860 slabs	1859 slabs	1858 slabs	1857 slabs
Straits.....	49259	38275	12828	45015
Banca	10945	12481	50268	20768
Total.....	60204	50756	63096	65783

The present stock is estimated at 560 tons, against 650 tons last month.

The oil market has continued in a healthy state. For tallow, the inquiry has been extremely quiet. To-day, P.Y.C., on the spot, has realised 60s 9d to 61s; all the year, 60s 6d; December, 60s 9d to 61s; January to March, 61s to 61s 6d; April to June, 58s 6d; October to December, 1861, 58s per cwt. Town tallow is 60s 9d net cash.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Oct. 23.—The market for State and Western flour closed dull at a reduction of from 5c to 10c, the inquiry having only been moderate, and with little demand for export. Canada had realised full prices, holders being firm. Southern flour continues dull and heavy, and some grades are slightly lower. Wheat experienced a fair inquiry from the local millers, and the aggregate sales were to a fair extent. Corn had experienced a moderate request, declining to 70c to 75c for white Southern, 72c to 74c for yellow ditto, 70c to 71c for mixed ditto, 74c to 75c for round yellow, 70c for Western mixed.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Notwithstanding that only moderate supplies of home-grown wheat have been on offer in the various markets held during the present week, the demand for both red and white qualities has been far from active. However, good and fine samples have realised fully previous rates; but low and damp parcels have, in some instances, gone off at slightly reduced rates. There has been a fair, but by no means active, inquiry for foreign wheat at the various outports, but without leading to any quotable change in value. We have to notice a good consumptive inquiry for useful and fine samples of barley at extreme rates. Damp parcels have met a slow sale on former terms. The malt trade has continued in a healthy state at full prices. Oats, beans, and peas have moved off freely; but we have no further change to notice in value. Fine flour has sold steadily, but other kinds have moved off slowly at about stationary prices.

The continuance of dry weather has materially improved the condition of the new wheats; still it continues very inferior, and a large portion of the crop cannot be converted into flour for some months. In the meantime, however, we shall, no doubt, be amply supplied from abroad, and with parcels well suited to millers' purposes. Our impression is that wheat has seen its highest range of value; but it is pretty generally anticipated that all spring corn, especially fine barley, will command extreme rates during the whole of the winter.

There has been much less activity in the inquiry for wheat in the various continental markets; nevertheless, very little change has taken place in the value of any kind. Barley, oats, beans, and peas have continued active, at very full prices. Advices from New York show large sales of wheat, flour, and Indian corn for shipment to the United Kingdom.

In Ireland, the demand for wheat has been somewhat restricted, and, in some instances, damp parcels have been forced for sale on easier terms. The transactions in barley and oats have rather increased; but other descriptions of produce have met a slow inquiry.

The Scotch markets have been moderately supplied with wheat, in full average condition. Most kinds have moved off slowly, yet prices have been supported. Barley and oats have sold steadily, at full quotations, and rather large shipments have been made to the South.

Only a limited quantity of English wheat was on sale in our market to-day, yet all kinds moved off slowly, at barely Monday's currency. In foreign wheat—the show of which was large—very little was passing, at about previous rates. All kinds of spring corn moved off steadily, at full quotations; but the inquiry for flour was much restricted.

The state of the floating trade is thus reported by Mr E. Rainford:—Since the 31st ult., 45 arrivals for orders are reported, consisting of 27 cargoes of wheat, 16 maize, and 2 beans, viz.:—Wheat, 6 from Alexandria, 1 Constantinople, 1 Venice, 9 Taganrog, 4 Odessa, 3 Berdianski, 1 Leghorn, 1 Trieste, 1 Marianople; maize, 1 from Galatz, 4 Sulina, 8 Constantinople, 2 Ibraila, 1 Odessa; beans, 1 Casabianca, 1 Lisbon. About 15 of the above had changed owners before arrival. Excepting on Monday last, when there was an animated demand for maize, the business in cargoes afloat has been dull and dragging, with a downward movement in Azof wheats, but maize bringing full prices. The following are the transactions since this day week up to the close of to-day's market, prices being modified by the quality and condition:—Wheat, arrived, Berdianski, 59s 6d; ditto, warm throughout, 58s 6d; Taganrog Ghirka, 2 at 55s, 1 at 54s 6d, 1, partly imperfect, at 54s, all per 492 lbs; Polish Odessa, fine quality, 59s, and Galatz, slight heat and smell decreasing downward, at 52s 3d per 480 lbs; Saide, 45s 6d per imperial qr; on passage, hard Taganrog, 54s 6d per 492 lbs; to be shipped, 1,700 to 2,000 qrs Venice, at 56s 6d per 492 lbs. Maize, arrived, Ibraila, 39s to 40s; Wallachian, 39s 6d to 39s 10½d; Bulgarian 38s, Turkish 38s, both imperfect, all per 480 lbs. Beans, now shipping, Egyptian mixed at 37s per imperial qr.

The London averages announced this week are:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The advance last reported has been exceeded by 6d per cwt, and many importers will not sell even at the existing quotations. There is a very scanty supply of West India, consequently the sales to yesterday were only 1,060 casks, including the Barbadoes brought to auction, which ranged from 39s to 45s. Clayed Manilla is 6d dearer, and 41s 6d was refused for some of fine quality yesterday. Landings last week were 3,200 tons, and the deliveries 4,800 tons, making an increase of 13,450 tons for home use since the 1st January. The stock is reduced to 63,750 tons, against 75,500 tons last year.

Mauritius.—Several parcels have sold by private contract at full prices.

Madras.—2,000 bags grocery out of recent sales have been sold pri-

vately at full prices. 1,562 bags native, by auction, went at 33s 6d to 37s 6d per cwt for brown and yellow.

Bengal.—7,663 bags were mostly sold, besides 3 or 4,000 bags by private contract. Gurpatta date, 41s 6d to 44s; grainy sorts, 45s to 46s 6d.; Cossipore syrops, 42s 6d to 44s 6d; low brown and soft Dumma kinds 32s 6d to 38s 6d; soft grey, 39s to 40s 6d per cwt.

East India.—Of 12,188 bags, the bulk found buyers: soft black and low Singapore, 33s to 35s 6d; middling to good from 36s to 39s; soft grey, 39s 6d to 42s. Siam kinds: yellow, low to fine strong, 42s to 46s; white, 46s to 46s 6d. Penang: brown and yellow, 38s to 43s 6d per cwt.

Foreign.—Transactions privately on the spot have included 2,500 boxes Havana, at 41s 6d to 48s 6d; 17,000 bags clayed Manilla, at 39s 6d to 40s; 200 barrels 2,500 bags brown Bahia, at 40s; and 6,400 bags low brown Paraiba, at 38s. A floating cargo of Havana, No. 12, has been reported at 29s 6d for the Clyde, and one of clayed Manilla for this port at 40s. By auction, 1,700 boxes Havana was only partly sold at 41s to 45s 6d for brown to good yellow. 434 casks 63 barrels Porto Rico were partly disposed of: brown to good yellow, 41s to 46s. 168 casks Cuba were chiefly taken in at 40s to 43s per cwt for brown to middling soft yellow.

Refined.—The market continues very firm. Common goods cannot be obtained under 51s; middling to fine command 51s 6d to 53s 6d; crushed, 49s 6d to 50s per cwt. There has been a steady demand from the trade.

COFFEE.—There have been liberal supplies brought forward, and the market is steady; but the better kinds of East India do not quite maintain their late high value. 581 cases 1,300 bags 590 cases partly sold: Koondah Mountain, 72s 6d to 78s 6d; other kinds, including Naidoobatcum, at 79s to 85s; fine of the latter bought in as high as 97s; Munzerabad realised 80s to 92s 6d. The public sales of plantation Ceylon to yesterday (Thursday) contained 1,410 casks 1,588 barrels and bags, of which a large proportion met with purchasers: fine ordinary to low middling, 65s to 70s; middling palish to good middling, 70s 6d to 75s. A floating cargo of Channel firsts Rio has sold for the Mediterranean at 54s 6d per cwt.

COCOA.—505 bags Trinidad partly sold at 69s to 86s for grey to fine red, the remainder being taken in above the value. 133 bags Surinam were bought in at 68s to 70s; and 400 bags Venezuela at 80s per cwt.

TEA.—Further public sales are declared for next week, viz., on Tuesday and Thursday. The market has been inactive by private contract, the few transactions reported showing scarcely change in price. The stock in London is 42,966,000 lbs, against 40,038,000 lbs last year.

RUM.—The market has been firm, but less active than of late. Stocks in first hands are, however, much reduced, and the few sales made fully sustain the recent advanced quotations for West India. Good proof Leewards, 1s 9d; Demerara, 1s 11d to 2s. A parcel of good Penang has sold at 1s 9d per gallon.

RICE.—A good inquiry still prevails, and transactions of considerable extent have taken place at fully last week's quotations, including soft grain descriptions at 10s 6d to 11s 6d; white Bengal, 12s 6d to 14s; common pinky Madras, 11s 10½d to 12s. A floating cargo of mixed Arracan is reported for this kingdom: Necrancie at 11s 9d; Lurong, 11s 7½d; one of Necrancie at 12s 1½d, and one of Rangoon at 12s per cwt.

IMPORTS and DELIVERIES of RICE to November 3, with STOCKS on hand.

Stock	42400	71500	88000	59300

SAGO.—350 bags common large Borneo sort sold in public sale at 14s per cwt. Sago flour has brought 18s to 18s 6d per cwt by private contract.

SALTPETRE.—The sales to yesterday were about 3,000 bags Bengal, at stiffer rates for common to middling qualities: refraction 10½ to 6¾, 40s 9d to 43s; fine, 43s 6d. 800 bags Bombay have been disposed of at 38s to 38s 6d per cwt.

IMPORTS and DELIVERIES of SALTPETRE to November 3, with STOCKS on hand.

	1860.	859.	1858.	1857.

Stock	4350	3850	3000	7000

SPICES.—The sales have been very large this week. Nutmegs sold rather cheaper; 116 cases, chiefly brown sorts, ranging from 1s 1d to 2s 4d for low small to good bold. 27 cases mace: very good, 1s 11d to 2s; low and mouldy to fair, 11d to 1s 4d. 157 bags Zanzibar cloves were bought in at 3¾d to 4¼d, a few lots selling at 3¾d to 3¾d. 3 cases good Penang realised 1s 2¾d to 1s 3d. Of 6,600 bags pepper, a considerable portion sold: Singapore at 3¾d to 4¼d for low to fair, being easier rates; fair common Penang, 3¾d; Trang bought in at 4d to 4¼d. 200 bags common to good white Singapore at 6d to 6¾d, showed ¼d to ½d advance. 232 bags pimento sold at 3d to 3¼d per lb for low to middling. 2,047 cases cassia lignea were partly disposed of at full prices: ordinary to good, third to first piles, 89s to 96s. 801 cases 333 bags Cochin ginger: small and wormy to fine bold went at 39s to 100s. 100 bags African were bought in at 37s 6d. 140 barrels Jamaica sold steadily at 63s to 84s per cwt for ordinary to good.

DRUGS.—Camphor is firmer. At the public sales, yesterday, the most important change to notice was the advance of 5s to 7s per cwt paid for Cape aloes.

SHELLAC.—The market still continues to show an upward tendency. Fine orange has sold at 12*l* 17s 6d; fine garnet, at 11*l* 10s per cwt. Other sorts at high rates in proportion.

LAC DYE.—Good marks have sold at 1s 10d to 1s 10½d; fair native, 8d; fine marks bought in at 2s to 2s 6d; and D T at 1s 11d per lb.

RED SANDERS WOOD sold at 5*l* 12s 6d to 5*l* 17s 6d per ton.

COCHINEAL.—The market is devoid of animation. 244 bags partly sold at previous rates: Honduras silvers, 2s 6d to 3s 4d; Teneriffe, 3s 1d to 3s 2d; black, 3s 2d to 3s 8d; Mexican silvers bought in at 2s 10d to 2s 11d per lb.

METALS.—Moderate sales have been effected this week, and the market is still rather quiet. Scotch pig iron was quoted 52s 9d for mixed Nos., yesterday. Manufactured descriptions remain as before. More inquiry prevails for spelter, and several contracts have been made at 19*l* 17s 6d to 20*l* 5s per ton on the spot and to arrive. Foreign tin and copper are inactive at the quotations. The deliveries of the former in Holland were comparatively small last month; but there is still an increase since the 1st January over the preceding year.

HEMP.—Manilla continues to attract attention, and there are not many sellers even at the recent advance. On Wednesday, 2,800 bales, by auction, partly sold: low to good roping, 22*l* 10s to 25*l* 10s; a small portion of fine white at 35*l*. A few parcels also changed hands by private treaty. Russian is less inquired after. Petersburg clean quoted 34*l* 10s 35*l* to per ton this morning.

HIDES.—The sales of East India, held yesterday, went off at a decline of ¼d to ⅜d per lb, and 182,000 hides brought forward two-thirds sold.

JUTE.—Several parcels have sold privately on the spot and to arrive at reduced rates. The public sales on Wednesday went off at 10s to 15s advance, from 13*l* 15s to 22*l* 10s per ton. The stock is 13,600 tons.

LINSEED continues very firm. Calcutta, on the spot, 60s; Bombay, 62s 6d to 63s. Large sales have been made afloat: Calcutta, 58s 6d; Black Sea and Azoff, 57s 6d per qr.

OILS.—Sperm has been dull and offered at 103*l* to 101*l*. Pale seal advanced to 38*l*. Olive dull at 55*l* to 60*l* per tun. Cocoa-nut remains very firm: Ceylon, 52s 6d to 53s; Cochin, 54s 6d to 55s. A good business is reported for arrival at 51s to 51s 6d. Palm meets ready buyers at 48s to 48s 6d for fine. The market for rape has partly recovered from the late depression caused by forced sales: foreign refined, 44s to 45s; brown, 42s to 42s 6d. The latter sold at similar prices for delivery up to next April. Linseed, owing to the large production, can still be obtained at 29s 9d and 30s 6d per cwt for delivery up to March next.

TURPENTINE.—Spirits are less inquired after, and American drawn can be obtained at 34s per cwt.

TALLOW.—The excitement in this market has subsided, and prices are rather lower, viz., 60s 6d to 60s 9d for Y.C.; 61s for spring; and 58s 6d per cwt April to June delivery. There was a further increase in the stock last week amounting to 6,500 casks.

PARTICULARS OF TALLOW.—Monday, November 3.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market was firmer to-day, and low descriptions of Madras went rather dearer. 3,262 bags partly sold: dark grainy brown, 37s; dark Jaggery bought in at 34s 6d; low soft brown, 34s 6d to 35s; 200 bags grocery realised 45s 6d to 46s. 4,033 bags Bengal partly sold: Bally and Cossipore, 45s 6d to 46s; Gurpatta date, 43s 6d to 44s 6d. 1,919 bags Mauritius were partly bought in above the value, the remainder sold at full prices; also 111 casks Barbadoes. The sales for the week reach 1,172 bhds. 3,000 bags clayed Manilla brought 40s 6d. A cargo of Mauritius is reported for the United Kingdom at 29s 6d per cwt, No. 11 to 11½.

COFFEE.—192 casks 198 barrels and bags plantation Ceylon sold at full prices, from 65s 6d to 90s per cwt for fine ordinary to fine. 96 bags Malabar: good ordinary pale, 65s.

COCOA.—73 bags Trinidad were bought in at previous rates. 36 bags Grenada part sold at 62s to 64s per cwt.

RICE.—Several parcels of white Bengal rice sold privately, including fine at 15s 3d per cwt.

COCHINEAL.—52 bags by auction partly sold at previous rates.

SHELLAC.—Good to fine orange sold at 12*l* 7s 6d to 12*l* 10s; good red liver, 12*l*; garnet, 11*l* 12s 6d; fine button 11*l* 5s to 11*l* 7s 6d per cwt.

OILS.—By auction sperm partly sold at 102*l* to 103*l*; seal, 32*l* 15s to 38*l* 5s. 3,140 tubs Japan fish oil, 27*l* 5s to 30*l* per tun.

TALLOW.—Town unchanged.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been well supported this week, but the principal demand has been for unstoved goods. Treacle very firm, and in fair demand. From Holland the accounts come firm for crushed, and higher prices have been paid there for delivery in January next.

GREEN FRUIT.—Market bare, contrary winds preventing arrivals. A parcel of Lisbon oranges per steamer, sold by Keeling and Hunt at public sale, went from 21s to 22s 6d per package. No sellers of black Spanish at 36s, being held for an advance. Barcelona steady at 34s to 37s. Almeria grapes of fine quality realised 48s per barrel.

DRY FRUIT.—In currants of all descriptions we have to report a good healthy trade. Fine are scarce, and a sale is reported at 34s, quantity not known. Low new is plentiful, and sells at 25s to 27s, but not much much inclination on part of sellers to give way in their demands. Old attracts attention from the fact that very little of the large stock on hand is brought forward; 24s has been paid for some fine and 22s for ordinary. Considerable orders are waiting execution at 21s. Valencias are rather quiet, but sales have been made at 39s afloat, and 40s on the spot. Supplies for the next months will be very meagre. Figs are selling in large quantities, the very low rates and prospect of small supplies attracting dealers: 90s has been paid for fine in layers. Sultanas firm at 52s to 55s. Other fruits are without any novelty.

ENGLISH WOOL.—Trade very dull; where sales are pressed lower prices are taken.

COLONIAL WOOL.—The market continues firm. The sales, which will commence on the 15th inst, will continue until December 7.

FLAX unaltered.

HEMP.—Market steady, and a fair amount of business done this week, at the quotations.

COTTON.—Sales of cotton wool from Friday, November 2, to Thursday, 8th, inclusive:—2,700 bales Surat at 4⅜d and 4⅞d for middling fair old Dhollera and Oomrawattee; 5d to 5⅛d for fully fair new Oomrawattee; 5¼d for good fair new Dhollera; and 5⅜d to 5½d for good fair new Broach; 800 bales Madras, 4⅜d to 5⅛d for middling to good fair Tinnivelly; 5⅛d for a few very good: 1 000 bales Madras at 4½d and 4⅝d for good fair Western. On Friday last a good demand prevailed, and extreme prices were readily paid. On Saturday, owing to the activity at Liverpool, which was caused by advices from the United States of a killing frost, this market became excited, and fully 3,000 bales changed hands late in the day at an advance in some cases of ⅛d to ¼d per lb. The American accounts received on Monday not confirming these late reports of frost, the market relapsed into inactivity, the transactions being very limited. Holders, however, showing no disposition to give way, prices may be nominally quoted ⅛d per lb higher than last week. Yesterday, 262 bales middling fair Tinnivelly were sold at public sale at 4⅞d per lb. Market firm. Sales to-day, 300 Compta at 4½d; 400 Tinnivelly at 4⅝d for middling; 5¾d for very good new.

TOBACCO.—The market remains firm and steady, and a full average business has been transacted at present quotations.

LEATHER AND HIDES.—The supply of leather at Leadenhall, this week, was quite ample for all wants, and a limited amount of business was done, generally at former prices. For prime harness hides of 35 lbs to 38 lbs fully former rates have been obtained. At the public sales of foreign goods, this week, salted hides were little noticed. None of the River Plate were sold. About half of the 2,150 Cape found buyers at a slight reduction on last prices. Of 23,285 Australian, only 3,746 were sold at ⅛d lower. Of 2,185 drysalted Mauritius none were sold. The dry River Plate hides found some buyers for export, at previous quotations. From 184,633 East India kips, 99,400 were sold, generally at a reduction of 1d per lb.

METALS.—Nothing of note has occurred in our market this week. The standard for copper ores has advanced, but the sale of copper is uniformly dull. Iron keeps steady, with perhaps a shade better demand. Tin unchanged. Lead rather more inquired for, but still quiet in demand. Spelter has rallied a little, but entirely from speculative operations. Tin plates continue to be neglected.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	63	3
Fat by ditto	3	3
Yellow Russian	62	6
Melted stuff	44	6
Rough ditto	27	0
Greaves	20	0
Good dregs	7	6

Imports this week 9,639 casks.

METROPOLITAN CATTLE MARKET.

MONDAY, Nov. 5.—The total imports of foreign stock into London last week amounted to 8,599 head. In the corresponding period in 1859 we received 7,120; in 1858, 4,513; in 1857, 6,244; in 1856, 6,201; in 1855, 5,679; and in 1854, 5,532 head.

Fresh up from our own grazing districts the arrivals of beasts were on a very moderate scale, and in very middling condition. For all breeds there was an active inquiry at an advance in the quotations compared with Monday last of from 4d to 6d per 8 lbs. There was a very limited number of sheep on offer, in, for the most part, poor condition. The mutton trade was brisk at 4d to 6d per 8 lbs above the currencies realised this day se'nnight. Calves, the supply of which was limited, moved off briskly at a further improvement in value of 4d per 8 lbs. The top figure was 5s 4d.

SUPPLIES.

	Nov. 8, 1858.	Nov. 7, 1859.	Nov. 5, 1860.
Beasts	5645	5360	4970
Sheep	24550	23820	18700
Calves	129	168	149
Pigs	300	460	300

THURSDAY, Nov. 8.—The supply of beasts here to-day was considerably on the increase. All breeds met a dull inquiry, at a decline in the quotations, compared with Monday, of 2d per 8 lbs. We were seasonably well supplied with sheep. Prime Downs and half-breds supported previous rates; but the value of other breeds gave way 2d to 4d per 8 lbs. We have to report a heavy sale for calves, the supply of which was good, at 4d per 8 lbs less money.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	8	2	10	Prime Southdown sheep	5	4	5	6
Second quality ditto	3	2	3	8	Large coarse calves	4	0	4	6
Prime large oxen	3	10	4	0	Prime small ditto	4	8	5	0
Prime Scots, &c.	4	8	4	10	Large hogs	4	0	4	6
Coarse and inferior sheep	3	2	3	8	Small porkers	4	8	5	4
Second quality ditto	4	0	4	6	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	8	5	2	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 1,300; sheep and lambs, 6,250; calves, 380; pigs, 390.
Foreign supply—Beasts, 700; sheep, 1,020; calves, 180.

NEWGATE AND LEADENHALL.

FRIDAY, Nov. 9.—The supplies of meat are moderately good, and the demand is less active, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	4	2	8	Mutton, inferior	3	2	3	6
Middling ditto	2	10	3	6	— middling	3	8	4	0

Veal	3	10	4	0	Small pork	4	10	5	4

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Nov. 5.—During the past week the arrivals, both coastwise and by rail, have been large; the trade, towards the close of the week, very heavy; and prices quite 10s per ton lower. The following are this day's quotations:—York Regents, 110s to 130s; Lincolnshire ditto, 110s to 120s; Dunbar ditto, 120s to 140s; Perth, Forfar, and Fifeshire ditto, 110s to 120s; French whites, 105s to 110s; Belgian ditto, 90s to 100s per ton.

WATERSIDE, Thursday, Nov. 8.—Fair supplies of home and foreign produce have come to hand since our last report, and the market is plentifully supplied for the time of year. Trade continues dull, and prices are not quite so firm:—York Regents, from 120s to 130s; Kent and Essex ditto, from 110s to 140s; Scotch ditto, from 110s to 120s; Dunbars, 120s to 140s; French, 100s to 110s; Belgian, 100s to 105s; Prussian, 90s to 100s per ton.

HOP MARKET.

BOROUGH, Monday, Nov. 5.—The market during the past week has been exceedingly inactive, and to effect sales lower prices have been submitted to. The duty is daily expected, and is estimated at from 45,000*l* to 50,000*l*. Our currency is as follows:—Mid and East Kent, 8*l*, 18*l*, 25*l*; Weald Kents, 8*l*, 14*l*, 20*l*; Sussex, 7*l*, 10*l*, 14*l*; Yearlings, 6*l*, 8*l* 8*s*, 11*l*.

FRIDAY, Nov. 9.—Our market is very inactive, at barely stationary prices.

DUTY.—An account of the duty on hops of the growth of the year 1860:—

Collections.	Duty at 1½d per pound. £	s	d

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10*s* to 5*l* 12*s*; clover, 3*l* 10*s* to 5*l* 15*s*; and straw, 1*l* 10*s* to 1*l* 18*s* per load. A slow trade.

WHITECHAPEL.—Meadow hay, 2*l* 10*s* to 5*l* 12*s*; clover, 3*l* 10*s* to 5*l* 15*s*; and straw, 1*l* 10*s* to 1*l* 18*s* per load. A heavy market.

COAL MARKET.

FRIDAY, Nov. 9.—Wall's-end:—Hetton 24*s*—Haswell 24*s*—South Hetton 24*s*—Hartlepool 23*s* 9*d*—Braddyll's Hetton 23*s* 6*d*—Kelloe 23*s* 6*d*—Framwellgate 22*s* 6*d*—Durham 20*s* 6*d*—Marway and Duffryn 23*s*—Tanfield Moor 15*s* 6*d*—Cowpen 17*s* 9*d*—Davidson's Hartley 17*s* 9*d*—Hasting's Hartley 17*s* 9*d*—Howard's Hartley 17*s* 9*d*. Ships at market, 55.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 9.—There is a fair business going at steady prices, and stocks of some descriptions of foreign are unprecedentedly low, which must eventually tell upon prices, if the demand generally is not checked by some unforeseen events.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 9.—Corn market moderately attended; only a moderate business doing. Wheat declined 2d per cental. Flour, 6d per barrel and sack lower. A limited business in Indian corn, at 39s to 39s 6d for Galatz and mixed. Beans, oats, and oatmeal dull, and without change.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 9.—The market for manufactured iron remains with little or no change. The late improvement in Welsh bars is maintained. There have been but few transactions in Scotch pig iron during the week, but the tone of the market is firmer. For copper there continues but a languid demand. Lead is also little inquired for. Most other metals remain unaltered.

The Gazette.

TUESDAY, Nov. 6.

BANKRUPTCIES ANNULLED.

W. Richards, Upper North place, Gray's inn road, builder.
L. Andrewe, Wells, Norfolk, grocer.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Oct. 27 amounted to 534,410*l*, and for the corresponding week of last year to 495,745*l*, showing an increase of 38,665*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 229,858*l*, and for the corresponding week of 1859 to 216,931*l*, showing an increase of 12,927*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Nov. 5.—The railway market to-day was firm, and most of the leading stocks closed at an average advance of ¼ per cent. The general business, however was limited. The principal operations in the colonial market continued in the securities of the Grand Trunk of Canada. Foreign shares improved, especially French; South Austrian and Lombardo-Venetian also advanced to ⅜ to ½ dis. American securities were flat, particularly the shares of the Illinois Central and New York and Erie, in which a fall of 3 dols took place. No change of importance occurred in mines or joint stock banks. In miscellaneous descriptions, Electric Telegraph stock receded, while Peninsular and Oriental Steam shares were quoted higher. Victoria debentures, new, left off at 106½; Canadian Five per Cents., 103¾.

TUESDAY, Nov. 6.—The railway market was firm at the opening, but receded later in the day. In several cases a decline of ¼ to ½ per cent took place compared with yesterday; Midland, Lancashire and Yorkshire, and South-Eastern being the flattest stocks. The principal feature in the colonial market was a fall of nearly 1*l* in Great Western of Canada shares on the issue of the report, the closing price being 12 to ¼. Grand Trunk stock also sustained a fresh decline to 21½ to 22. Buffalo, Brantford, and Goderich bonds were quoted lower. No material change occurred in foreign railways. South Austrian and Lombardo-Venetian were dull at ⅜ dis. In American securities a partial rally took place in the shares of the Illinois Central and New York and Erie. Mines were quiet, but firm. The shares of the Ottoman, Chartered of India, and London Chartered of Australia banks improved, especially the former. In miscellaneous descriptions, Peninsular and Oriental declined, while Victoria Dock and South Australian Land were quoted higher.

WEDNESDAY, Nov. 7.—The principal fluctuations in the railway securities to-day were in Canadian descriptions, which were pressed for sale, and, the market being over-supplied, a further decline took place. Great Western of Canada shares opened at 11¼ to 12, fell to 10⅞, but on the publication of a letter from the secretary explaining the statements in the report respecting the future amount of outlay for permanent way, &c., rallied to 11¼ to ⅜, or about 15s lower than yesterday. Grand Trunk stock, after marking 20, left off at 20¾ to 21. The ordinary bonds were last quoted 47 to 49, and the preference 75 to 77. English stocks remained steady, and in one or two cases exhibited a trifling advance. The transactions in this department were again on a limited scale. In foreign descriptions, South Austrian and Lombardo-Venetian improved to ¼ dis. American securities also presented a dull tendency. Mines were quiet, but occasionally showed an advance. In joint stock banks, Ottoman and Chartered of India were firm. In miscellaneous descriptions, London Discount shares were higher.

THURSDAY, Nov. 8.—The railway market was rather flat after the opening, but subsequently rallied, and several stocks showed an advance—Great Western in particular. The good traffic returns still lead to the expectation of higher dividends for the current half-year, but the market is checked by the circumstance that the late rise was chiefly due to speculative withdrawals on borrowed money, and not less to investments by the public Grand Trunk and Great Western of Canada slightly rallied in the morning, but afterwards returned to nearly yesterday's prices. In the foreign market, South Austrian and Lombardo-Venetian improved ⅛ to ¼ discount to par. Victor Emanuel obligations were also higher. A general decline took place in American railway securities in consequence of the depression in New York; the shares of the Illinois Central, New York and Erie, and New York Central especially receded 4 dols to 5 dols. Mines continued inactive, but generally steady. In joint stock banks, Oriental shares were flat. In miscellaneous descriptions, a slight rise occurred in Madras Irrigation.

FRIDAY, Nov. 9.—The railway share market to-day, though very inactive, was steady. South-Eastern and Caledonian stocks were chiefly inquired for, and advanced about ¼ per cent. As regards other descriptions, the variation, compared with the closing quotations of Thursday, did not exceed ⅛ per cent. London and North Western stock was quoted 100⅜ to ⅝; Great Western, 73⅜ to ⅝; Midland, 133⅛ to ⅜; Lancashire and Yorkshire, 117⅜ to ⅝; South-Eastern, 85⅞ to ⅞; Eastern Counties, 52¼ to ⅜; Caledonian, 92 to ½; and Great Northern, 114 to 115. Lombardo-Venetian railway shares rose 1-16 to 3-16 prem. The Canadian railway shares were quieter than yesterday, but not lower. East Indian railway stock continued to meet with inquiry.

The Economist's Railway and Mining Share List.

DR. KAHN'S PHILOSOPHY OF MARRIAGE.

Published and sold by J. Allen, 20 Warwick lane, Paternoster row; or from the Author's Address, 17 Harley street, Cavendish square, W.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES,

Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers

NO MORE PILLS OR ANY

other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.

DR BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.

Certificate No. 36,418.—We find it the safest remedy Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurzer Dr Shorland; Dr Campbell.

We extract a few out of 56,000 cures:—

Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with crampe, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.

Similar testimonials from 56,000 patients who can be referred to.

The food is sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Berry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 830 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

CURE OF ASTHMATIC COUGH

by DR LOCOCK'S PULMONIC WAFERS.—From James Sutcliffe, Farmer, Water Meeting. "I have great pleasure in bearing testimony to the efficacy of Dr Locock's Wafers, from the use of which I have derived very great benefit, and have no hesitation in saying that as a remedy for Asthma and difficulty in breathing they are unequalled. Signed—J. SUTCLIFFE." To Mr Evans, Chemist, Barrowford.—DR LOCOCK'S PULMONIC WAFERS give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

DR BUCHAN'S PATENT

SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 22 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Prout, 229 Strand, &c., &c.

Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

KEATING'S COD LIVER OIL.

Just Imported. The Pale from Newfoundland, and the Light Brown from Norway. The supplies of the present season have never been surpassed, the fish being unusually fine, and the oil nearly tasteless. Professors Taylor and Thompson, of Guy's and St Thomas's Hospitals, have analysed, and pronounced the PALE NEWFOUNDLAND OIL the best and most desirable for invalids of very delicate constitution. The Light Brown being more economical in price, is brought within the reach of all classes. NO HIGHER PRICE NEED BE PAID than the following:—Light Brown, 1s 8d per pint, or 3s per quart. Pale, 1s 6d half-pints, 2s 6d pints, 4s 6d quarts, or in five-pint bottles, 10s 6d, imperial measure, at 79 St Paul's Churchyard.

A BOON TO NERVOUS

SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Free for Six Stamps.

ENGLISH, FRENCH, AND

AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

DR DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL.

Prescribed by the most Eminent Medical Men as the safest, speediest, and most effectual remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners, prove that a half-pint of Dr de Jongh's Oil is far more efficacious than a quart of any other kind. Hence, as it is incomparably the best, so it is likewise unquestionably the cheapest.

Palatableness, speedy efficacy, safety, and economy, unitedly recommend this unrivalled preparation to invalids. NO OTHER OIL CAN POSSIBLY PRODUCE THE SAME BENEFICIAL RESULTS.

Opinion of Sir HENRY MARSH, Bart., M.D., T.C.D., Physician in Ordinary to the Queen, in Ireland; President of the Royal College of Physicians in Ireland; Visiting Physician to Steevens' Hospital; Consulting Physician to the City of Dublin, St. Vincent, and Rotunda Hospitals, &c., &c.

"I have frequently prescribed Dr de Jongh's Light Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value.

"Merrion Square, Dublin,
"September 8, 1860."

Sold ONLY in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s., capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE CONSIGNEES,
ANSAR, HARFORD, and CO., 77, STRAND, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND

CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By Dr J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.

Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

Just published, 71st thousand, price 1s, post free for 12 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.

DR LA'MERT ON SPERMA-

TORRHŒA; an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.

CONTENTS.

SECTION I.—The Physiology of the Generative Organs.

SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.

SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.

SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.

SECTION V.—Spermatorrhœa, or Chronic Impotence: its History, Causes, and Moral Consequences—The Sterility of Age.

DR LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.

37 Bedford square, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

THE YORKSHIRE BOTTLE COMPANY (ALEXANDER, AUSTIN, and CO.,) have Removed to their new commodious Warehouses, Victoria Wharf, Earl street, Upper Thames street, near Blackfriars bridge, where all orders for Flint, Pale, and Black Glass Bottles, &c., will receive prompt attention

PIANOFORTES.—CRAMER, BEALE, and CO. NEW MODEL OBLIQUE GRAND PIANO, and every description, warranted. List of prices and terms for hire, post free.—201 Regent street.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 18s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 38s per dozen; or securely packed in a case for the country, 39s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Manufactory, Silvertown, opposite H.M. Dockyards Woolwich.

TRADE MARK.

BROWN AND POLSON'S PATENT CORN FLOUR.

The LANCET states,

"This is superior to anything of the kind known."

FIRST OF THE KIND

Manufactured and Patented in the United Kingdom and France, as explained with Engravings in THE ILLUSTRATED LONDON NEWS, of May 26th. Supplied by BROWN and POLSON, to Her Majesty the Queen, by order from Buckingham Palace. It is in great favour wherever it has been made known, for Puddings, Blancmange, &c., preferred to the best arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers and Purveyors to Her Majesty: Paisley, Manchester, Dublin, and London.

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-pin can be detached for cleaning the barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

PRINCE OF WALES'S HALL, Regent street.

CAPTAIN MORTON PRICE and MISS CATHARINE LUCETTE, Every Evening, in a series of the ENTERTAINMENTS, including THE DOUBLE COURTSHIP, with which they achieved their recent great success in the United States and Canada. Doors open at half-past Seven, commence at a quarter-past Eight. Admission, 3s; 2s; and 1s. Children in arms, £1 1s.

CANDLES, SOAPS, OILS, AND NIGHT LIGHTS of all kinds. Five pounds worth sent free by railway.—WHITMORE and CRADDOCK, 16 Bishopsgate street within, London, E.C. (Lists of prices on applications.)

SOYER'S SULTANA SAUCE

Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

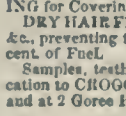
1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.



INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instruction on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

HOLLOWAY'S OINTMENT AND PILLS.—Comfort for All.—The prevalence of external disease is mournfully attested by multitudes whom riches cannot gladden, and whom poverty cannot cow. To all such it should be known that this cooling Ointment will arrest any outward inflammation, stay the progress of corruption, and heal the terrifying wound. After promiscuous trials by thousands of sufferers, not one has ever yet complained of its having once failed. Holloway's Ointment has conquered and cured inflammatory disorders in all parts of the world, and saved the precious lives of thousands. In diseases which have afflicted the frame for a long time, or contaminated the blood, Holloway's Pills should always be taken, as they act internally as favourably as the Ointment externally.

WHITECHAPEL DISTILLERY.

MESSRS FULLER AND HORSEY are instructed to SELL, at the Auction Mart, Bartholomew lane, on Thursday, December 13, at 12, in one or more lots, the highly important FREEHOLD and COPYHOLD PROPERTY, well known as the Whitechapel Distillery, at present conducted by Messrs Smith and Co., together with the whole of the costly fixed plant and machinery. The site occupied exceeds an area of 12 acres, more than three acres of which are covered with buildings of the most substantial character, arranged in the most perfect manner for the purposes of business, and now in complete working order. The capabilities of the premises may be judged from the fact that 1,500,000 gallons of spirits may be produced in one year at this distillery. The property is situate in Buck's row, a wide thoroughfare in Whitechapel, within a few paces of the London Hospital. The principal frontage is in Buck's row, but there are frontages in several surrounding streets, and the Eastern Counties Railway abuts upon the northern end of the property, affording facilities for the construction of a siding, and rendering railway transit available to all parts of the kingdom. The buildings are entirely and securely enclosed by lofty walls, with three gateway entrances. At the western entrance is a gate keeper's lodge, large paved yard, and a most commodious residence for a principal, finished in the best taste. The manufacturing premises consist of a block of buildings of great extent, occupying the central portion of the yard, accessible by carts or waggons on all sides, and comprising—1. The brew-house, a substantial, lofty, ground-floor building, with basement. It contains four cast-iron mash tuns, capable of mashing 300 quarters, fitted with the necessary mashing machines, cast-iron under back, five dome and one flat-topped coppers, ganging together 2,200 barrels, all fitted with rousers, and two with refrigerating pipes, two sets of 11-inch three-throw gun metal wort pumps, three sets of 6-inch three-throw gun metal wash pumps, two sets of 6-inch three-throw gun metal liquor pumps, brewer's room, men's room, sitting room for revenue officers, and store rooms. 2. The cooler-house, a lofty building of three floors, strongly timbered on iron columns, with lantern lights in the roof, and folding shutters; the upper floor fitted with 12 copper refrigerators of 70 and 72 pipes each, and four large square fir coolers, the two lower floors being used as a meal store and coal cellar. 3. The back rooms, two in number, containing 16 square cast-iron wash-fermenting backs, gauging together 680,000 gallons. 4. Yeast-house, with yeast back and copper pumps, and hot water apparatus for warming back rooms. 5. A deep Artesian well, affording a nearly inexhaustible supply of pure liquor, raised by a set of 8-inch three-throw pumps, and two single pumps of 8 and 9-inch barrels, with the necessary gearing. 6. The mill, substantially built of brick, of four floors, fitted with eight pairs of 4ft and 4ft 6 French burr stones, hoisting tackle, bins, &c., and stowage for malt, with set of crushing rollers and bolting machine. 7. The old mill, a brick building of three floors. 8. Steam-engine house, fitted with 30-horse condensing engine, by Boulton and Watt, communicating with boiler-house, containing two double-flue Cornish steam boilers. 9. The still-house, with Coffey's apparatus in two columns, capable of distilling 4,500 gallons of wash per hour, circular cast-iron wash charger, 27,638 gallons, circular cast-iron wash reservoir, about 27,000 gallons; spirit receiver, 4,105 gallons; feints receiver, 1,834 gallons, copper spirits and feints refrigerators in cast-iron back, feints back lined with copper, copper heating apparatus for supply of feed pipes to boilers, two double-flue Cornish boilers, each 9ft 6in diameter and 23ft long, a set of three-throw 6-inch gun metal wash pumps, and a single barrel 6-inch gun metal feints pump for apparatus. Surrounding the main building are various accessory erections, including the spirit store of one lofty ground floor with dry basement, loophole doors and crane for loading, six oak spirit vats, gauging from 5,000 to 10,000 gallons, cistern, offices for clerks, &c., the whole covered by a cast-iron liquor back, supported on cast-iron columns and girders, gauging 44,000 gallons, a liquor back of cast-iron, 116ft 5in long, 24ft 5in wide, and 4ft 6in deep, ganging 79,700 gallons, supported by a most substantial brick building of three floors, strongly timbered on iron columns, used as a joiner's shop and stores, and having in the basement a cast-iron liquor back, gauging 35,000 gallons, a steam-engine house, fitted with condensing engine by Boulton and Watt, of 20-horse power, and boiler-house containing three double-flue Cornish boilers nearly new, bricklayers' shed, piggeries, fire-engine house and surface well, steened, an extensive range of brick-built workshops, with the requisite fittings for carpenter, blacksmith, millwright, and cooper, beer cellar, small brewhouse or scalding-house, with copper and pump, and grain shed with stone floor. The yards are paved throughout with granite. Approached from a separate entrance are the duty-free spirit warehouse, a lofty ground floor building, with raised cask stage and paved basement; store for methylated spirit, a brick building adjoining of two floors, a paved yard, enclosed, containing warehouse of two floors next Buck's row, and sundry other conveniences; also a very superior range of counting-houses of two floors and basement, partly fitted as a dwelling-house, with iron safes of large size and excellent construction, &c. The northern portion of the property consists of a very valuable plot of ground occupying an area of nearly seven acres, abutting to the north upon Winchester street and the Eastern Counties Railway, and surrounded by a brick wall; the buildings comprise an open shed, a sawpit, a building for seasoning timber, cowhouse and calf-pen. This is a very important site for the erection of any large manufacturing establishment, as, by the construction of a siding on the Eastern Counties line, railway transit may be obtained to all parts of the kingdom. On the east of the distillery, with frontages to Buck's row and North street, is a large plot of ground, altogether occupying a site of 3½ acres, on which is erected a most substantial range of buildings of three floors, 315 feet in length by 48 feet in depth, strongly timbered on iron columns, occupied as a granary; there are five grain pits, a spent wash reservoir, three spent wash pumps, and lean-to for loading grains; a most superior range of detached stabling, 475 feet in length, with frontages in Buck's row and Little North street, with stables for 24 cart horses, eight stalls for nag and carriage horses, open-sided waggon lodge, carriage and harness houses, forage loft, loose boxes, and paved yard enclosed with a lofty brick wall, and gateway entrances from Buck's row and North street; also a plot of vacant ground in Buck's row; a range of malt houses, with three kilns (two 12 qrs and one 18 qrs), with furnaces, spacious charging and cooling floors, malt bins, sack floor, store, lobby, and paved yard with two gateway entrances. May be viewed by cards only, which may be had of the auctioneers. Printed particulars are in course of preparation, and, with plans, may be obtained in due time of Messrs McLeod, Stenning, and Watney, solicitors, London street, E.C.; of Messrs Tennant and Darley, solicitors, 4 Raymond buildings, W.C.; of S. Lowell Price, Esq., accountant, 5 Gresham street, E.C.; and of Messrs Fuller and Horsey, Billiter street, E.C.

BANK OF BRITISH NORTH AMERICA.

Current or Floating Accounts (balanced half-yearly, on the 30th June and 31st December) opened with Individuals and Firms, bearing interest when the minimum monthly balance at credit is not less than £100 at the rate of two per cent per annum. When the balance falls below £100, a moderate Commission is charged, according to the nature of the account.

Deposits in sums of not less than £100 are received, repayable on 10 days' notice, at 1 per cent. below the Bank of England minimum rate of discount, rising and falling therewith.

Deposits for Fixed Periods are received at Interest, particulars of which may be obtained at the Bank.

Sales and Purchases effected in British and Foreign Securities, in East India Stock and Loans, and Army, Navy, and Civil Pay and Pensions realised.

Bills issued at the Exchange of the day, and free of any extra charge, on the Branches of the Bank.

Approved Bills drawn against Funds, or upon Parties in India, purchased.

Bills payable in India sent out for collection.

Circular Notes, payable at the principal Cities of Europe, granted.

Interest on Indian Government Securities drawn, and the equivalent paid to parties interested, without charge.—By order of the Board,

WILLIAM SHIPMAN, Officiating General Manager.

Hours of business, 10 to 4; Saturdays, 10 to 3.

ENGLISH, SCOTTISH, AND AUSTRALIAN CHARTERED BANK.

Capital paid up, 500,000*l.*

LETTERS OF CREDIT ON THE BRANCHES are GRANTED on the most favourable terms. Bills on the Australian Colonies negotiated and sent for collection.—By order of the Court,

73 Cornhill, E.C. HENRY MOULES, Secretary.

SOUTH AUSTRALIAN BANKING COMPANY.—Incorporated by Royal Charter, 1847.—Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, and Robe. Approved Drafts negotiated and sent for collection.

Every description of Banking business conducted with Victoria and New South Wales, through the Company's Agents.—Apply at 54 Old Broad street, London, E.C. WILLIAM PURDY, Manager.

CHARTERED MERCANTILE BANK of INDIA, LONDON, and CHINA.

Capital £500,000. Reserve fund £50,000.

HEAD OFFICE, 52 Threadneedle street.

Agencies and Branches at Bombay, Calcutta, Madras, Colombo, Singapore, Penang, Hong Kong, Shanghai, and Mauritius.

The Bank, at its Head office in London, grants Drafts on its various Agencies and Branches; issues Letters of Credit; purchases approved Bills on India, China, Ceylon, and Mauritius; undertakes the purchase and sale of Indian Government and other Securities, and the collection of Private and Mercantile Bills, at the ports and places at which its Agencies are established; receives Deposits at Interest for Fixed Periods, the terms of which may be ascertained on application; and transacts generally all Indian Banking business, including the receipt of Pay, Pensions, and Dividends on Stock of all kinds.

Office hours, 10 to 3; Saturdays, 10 to 2.

ORIENTAL BANK CORPORATION.

Incorporated by Royal Charter, 30th Aug., 1851.

Paid-up capital, £1,260,000; reserved fund, £252,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at Bombay, Calcutta, Madras, Ceylon, Hongkong, Singapore, Mauritius, Melbourne, Sydney, Auckland, and Wellington, on terms which may be ascertained at their office. They also issue Circular Notes and Letters of Credit for the use of Travellers by the Overland Route. They undertake the agency of parties connected with India, the purchase and sale of Indian Securities, the safe custody of Indian Government Paper, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above-named dependencies.

They also receive deposits of £100 and upwards, repayable on a notice of 10 days, and allow interest thereon at 1 per cent. below the Bank of England minimum rate of discount, rising and falling therewith. Deposits subject to longer notices of repayment bear higher rates which may be ascertained at their office.

Office hours 10 to 3. Saturdays, 10 to 2.

Threadneedle street, London, March 23, 1860.

NATIONAL DISCOUNT COMPANY (LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, October, 1860.

THE TRUST AND LOAN COMPANY of UPPER CANADA. Incorporated by Royal Charter. Capital £1,000,000.

DIRECTORS.

The Right Hon. Edward Pleydell Bouverie, M.P., President.

William Chapman, Esq., Deputy Chairman.

James Hutchinson, Esq.	William G. Thomson, Esq.
Charles Morrison, Esq.	T. M. Weguelin, Esq.

BANKERS—Messrs Glyn, Mills, and Co.

The Directors are prepared to grant Debentures for loans of sums of £100 and upwards, for periods of 3, 5, 7, or 10 years.

Any information required can be obtained on application to the Secretary. FRED. FEARON, Secretary.

55 Moorgate street, London.

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only intelligible systems, insures perfection in any of the above branches after a few easy and interesting lessons. Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand.

FREDERICK DENT, Chronometer, Watch, and Clock Maker to the Queen and Prince Consort, and maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

The Political Economist.

WHERE IS THE GOLD GONE?

We have endeavoured to prepare the readers of the Economist for an important increase in the value of money during the present autumn, but we have not prepared them for the extreme suddenness of the augmentation which has occurred. The increase we anticipated was delayed somewhat longer, and has in the end arrived much more suddenly, than we expected. On Tuesday the Bank of England raised the rate from 4½ to 5 per cent.—a very unusual circumstance, as Tuesday is not the day on which the Directors meet. On Thursday the Bank again raised its rate to 6 per cent.; having thus made an increase of 1½ per cent. in a single week—indeed in three days. We might be tempted to discuss whether the Bank would not have acted somewhat more wisely in taking earlier steps to protect their banking reserve, if there were not a remarkable phenomenon in the money market of the world, on which we wish this week to fix the undivided attention of our readers.

It is an astonishing fact that the Banks of France and England, taken together, have lost 10,400,000*l* of bullion since the corresponding period of last year.

	£
On the 16th November, 1859, the bullion in the Bank of England was	16,860,730
The bullion in the Bank of France was	23,336,930
Together	40,197,660
The corresponding return for Nov. 15, 1860, now is—	
Bullion in Bank of England.....	13,314,811
Bullion in Bank of France	16,482,567
Together	29,797,378

And the change is still more remarkable if we go back as far as August, 1859:—

	£
The bullion in Bank of England then was	17,281,883
The bullion in Bank of France.....	25,109,000
	42,390,883

showing a loss of 12,593,510*l* in the total reserve of the two Banks in fifteen months.

Every one who hears this startling fact for the first time, will at once ask where is all this bullion gone? who has taken it from us? who is using it? And to these questions it is not very easy to return a satisfactory reply.

The more obvious phenomena of the moment are sufficient to explain a slight diminution of bullion, but are wholly inadequate to explain so great one. A large expenditure, we know, is going on in China and in Syria for military purposes, and war, it is certain, absorbs some specie. Hostilities at a distance, moreover, always absorb a greater sum than those close at hand. This source of expense would explain *some* diminution of our cash, but it will not explain a loss of millions. France, as well as our ourselves, is suffering from a deficient harvest, and will have to import some grain, for which she must pay. She has not, like ourselves, extensive exports of coarse and ordinary manufactures; her exports, speaking generally, are of fine and luxurious commodities; in consequence, the demand for her exportable products will not be augmented by a good harvest in foreign countries so easily as the demand for ours. A good harvest makes the mass richer, and augments largely the sale of commodities used by the bulk of mankind; but it does not equally increase the opulence of the few, or induce them to take an unusual quantity of refined and costly luxuries. The deficient harvest here and in France will account for some diminution in the bullion reserve of the Banks of the two countries, and may lead us to anticipate a further reduction; but it cannot account for the vast diminution which we see has happened; nor will the combined effect of the bad harvest and the unusual military expenditure be sufficient to explain it. Every one acquainted with the relative magnitude of this effect and these causes will so far at least concur in what we are saying.

If we would really understand the peculiar phenomena we are investigating, we must look further back than this time last year. If we do so, we shall see at least what the nature of this phenomenon is, and we shall be better able to analyse its cause. The state of things which we now see is exactly the converse of that which we noticed in an elaborate article on the 10th July, 1858. From some cause or other, there had been at that time a great accumulation of bullion in France and in England. We then wrote:—"The "accumulations of bullion in the Banks of France and "England, and of America also have not unnaturally attracted "much attention. On the 18th November the bullion in "the Bank of England was only 6,484,000*l*; on the 30th "of June it was 17,938,000*l*. The bullion in the Bank "of France on the 12th November was less than seven "millions and a half; on the 8th of July it had risen to more "than twenty millions;—so that in round numbers the bullion "reserves of the two Banks have increased about twenty-four "millions in a few months, and at the end of the period are "nearly three times as large as they were at the beginning "of it. This augmentation of treasure has not been obtained "by diminishing the stock of gold held on the other side "of the Atlantic. The returns of the New York banks, "which are by far the most important, show that there is "a great accumulation of specie there also. On the 26th "of September, the cash in hand in the New York banks "was only 14,321,000 dols; it is by the last return "33,367,000 dols. So that the causes, whatever they are, "which have produced this accumulation, must be in opera"tion in America as well as in Europe, and any explanation "must be applicable to one country as well as to the other. We then explained by what cause we believed this accumulation to have been produced. We ascribed it to the generally quiescent state of the trade of the world. We remarked that the retail transactions of trade required much hard cash—much actual metal, though wholesale transactions in civilised countries are effected by transfers and cheques and credits. We observed:—"It would be a great mistake, "however, to suppose that the activity or inactivity of trade

"has no effect, or but a slight effect, on the metallic cur-
"rency of the world. Although the large and whole-
"sale transactions are carried on through the credit
"medium which we have described, the retail and smaller
"transactions are, from the necessity of the case, settled
"in actual cash. In this wages are paid; the small but
"enormously numerous purchases of the working classes
"effected; the detail of business done. Active trade requires
"a great extension of currency of that description, especially
"after it has been active for some time. The non-bank-
"ing classes are prosperous, and require for their trans-
"actions and for their savings an extension of currency, just
"as the more opulent classes require it for theirs. We see
"something of this kind annually. In every harvest, at least
"in many districts, an unusual quantity of silver is required
"for agricultural wages, which is gradually spent in petty
"purchases by the labourers, then lies for a longer or shorter
"time in the tills of the petty shopkeepers, and from thence
"slowly returns to the banks from which it came. The
"activity of trade is for this purpose a kind of perpetual
"harvest, which has a tendency to reduce the amount of
"coin in the reserves of banks, and to distribute it in
"driblets throughout the nation."

We believe that we are now witnessing an exemplification of the truth of these observations. When they were written, trade was suffering not only here but in all countries, from the effect of the panic of 1857. In 1855 and 1856 the entire trade of all countries had extended with unprecedented rapidity. On a sudden it met with a great check. Coin was thus, if we may use the phrase, *thrown out of employment*, and it flowed back to the banks, which are the usual storehouses of unused cash. Now, on the contrary, trade has revived; not the trade of this country, or of that country, but of all countries. A gradual extension of commerce is everywhere to be observed, much more money is required, and much less is to be found in the banking reserves.

We may instructively remember another fact. Although the bullion in the Banks of France and of England is reduced, it is not reduced to the point at which it stood in the summer of 1857.

	£
June 11, 1857, the bullion in Bank of France was.....	11,390,000
— the bullion in Bank of England was ...	9,588,000
	20,978,000

We have not yet reached the point of depression to which a very active trade had then reduced the reserves. But probably if we had not received the large sums which have been sent us from Australia and from California during the last three years, the Bank of England and the Bank of France would have been as poor now as they were then.

We now see accurately the nature of the problem which the Directors of the Bank of England and of the Bank of France have lately had to consider. We see that, *account for it as we may, the money which suddenly flowed in on them in* 1858 *is suddenly flowing away from them now.* At the earliest opportunity we shall feel it our duty to comment on the very different methods by which the two Banks are endeavouring to counteract a difficulty which is essentially the same.

VOTING FOR KINGS.

THE popular voting in the Roman and Neapolitan States in favour of Victor Emanuel and annexation is proceeding satisfactorily—so far, that is, as anything can be satisfactory in reference to so unsatisfactory a thing. The *result* of universal suffrage may be all that we can desire; but the *appeal* to universal suffrage was an error which we shall always deplore and condemn. To commit the fate of Kings and Kingdoms to the decision of the ballot-box, into which every man alike throws his ball or his ticket, must always involve a fallacious principle, and nearly always an unworthy farce. No one can rejoice more cordially or unreservedly than we do in the establishment of Italian unity and independence; no one can hail it more thankfully as a European blessing; —but all our blessings are bought with a price, and the price we pay for this one, it seems, is an additional sanction and confirmation of a practice vicious in theory and dangerous in application.

We hold it beyond question that a NATION—in crises such as the Italian one—is entitled to choose its own Sovereign and its own fellow-citizens:—we hold it equally beyond question, also, that the word NATION in such a context can never mean the mere numerical majority of the inhabitants. The mass no doubt endure oppression, cherish hopes, and feel hatred; and their sentiments, well or ill-grounded, well or ill-directed, must weigh much in the decision of the question;—but to take as of equal value in the determination of the Nation's judgment, the vote of the peasant and the vote of the statesman, the vote of the tiller of the soil and the vote of the thinker in the Senate, the vote of the man who believes that the first Napoleon is alive and the vote of the man who knows that he is dead, is irrational, unjust, and suicidal. The vaster the interests at stake, the grander the problems to be solved, the mightier and more far-reaching the consequences to be anticipated,—the more needful would it seem that the decision should be with the most competent hands, and should be arrived at in the most perfect calmness and liberty of choice. At the same time, we cordially admit that there *may* be cases in which the national instincts are so sound and the national antipathies so fierce, that popular sentiments become almost a weightier element in the question than even the sober judgment of experienced politicians; and Italy presents such an instance, if there ever was one. There *may* also be matters submitted to a nation's voice, where the cause is so noble and the interests involved so vast, as to elevate the popular mind for a moment to the height of so great an argument, to burn up for a time all meaner feelings, and as by a flash of light to illuminate *pro hac vice* the judgment of the uneducated;—and the question of Italian unity is perhaps as great a one as was ever submitted to national decision. But the *principle* of such appeals we must still hold to be essentially unsound; and this for the following considerations among others.

We have had some curious experience of late as to what universal suffrage *is* and what it *does*, when applied to the election of Sovereigns and the annexation of States. And, in the first place, we have learned that it is and must nearly always be a *farce*. The choice of the people never can be really free. We have yet to hear of an instance in which the voting has been hostile to the Prince actually in power. We have yet to hear of an instance in which the Sovereign in possession submitted his title to the decision of universal suffrage without being perfectly certain that such decision must be, and without taking very good care that it should be, in his favour. The voting is never between two real *candidates:* it never is, and never will be, more than a form by which popular acclamation is called upon (faithfully or fraudulently as the case may be) to ratify and repeat the decision of the sword. It was not till the Assembly was dissolved and till its leaders were in prison—not till the *coup d'état* had made Louis Napoleon the *de facto* Sovereign of France—that he dreamed of appealing to the ballot-box to pronounce that the people wished him to be—what he had already made himself. It was not till Tuscany, Romagna, and the Duchies had driven out their Rulers, or been liberated by their voluntary flight, that universal suffrage could be free to choose Victor Emanuel for their King and annexation for their fate. It was not till Savoy and Nice had been given or sold by the King of Piedmont to the Emperor of France by treaty and by transfer, and till such transfer was known and felt to be fixed and inevitable, that a people thus handed over from liberty to despotism were called to give a fallacious semblance of free consent to the transaction. They were not asked for their YES or NO, till YES was superfluous and NO was impossible or dangerous. Does any one believe that if Victor Emanuel had been powerful and reluctant, the voting would not have been all the other way? Does any one, finally, suppose that, if Garibaldi had remained in Sicily and Francis II. had still held paramount possession of the mainland, the universal suffrage of the Neapolitans would have decided for the King of Piedmont? Or, if such a disastrous miracle were to occur as that the troops at Gaeta should defeat their antagonists and once more spread themselves as conquerors from Capua to Reggio, have we sufficient faith in the courage and sagacity of universal suffrage to be willing to abide by and endorse its decision *then*?

We do not for one moment wish to express the slightest doubt as to the genuineness or the heartiness of the Neapolitan vote, or that the great proportion of the nation abhorred their old tyrant and were friendly to their new libera-

tor. All we say is, *firstly*, that we can never tell with certainty under such circumstances what universal suffrage really means; and that whatever it means, it is not the fit tribunal to decide. The more oppressed and brutish the masses, the less fit are they to decide, and the more likely are they to decide wrong. The deeper the benightment in which a Government has kept a populace, the more needful is a change of Government,—but by no means the more likely is the populace to desire it. The larger proportion the poor and ignorant bear to the educated few, the less right is it to place the determination of such questions in their hands. In the present case—in the case of the Italians generally—no doubt the national feeling is shared alike, though not equally, by all classes. The Sicilians hated Bomba; the Venetians hated the Austrians; the Romans hated the Priests. But it might have been otherwise. If the King of Naples had petted all his peasantry as he petted the Lazzaroni of the capital; or if he had cowed by relentless and sanguinary tyranny all the lower classes as he for a long period has cowed those of Messina and Palermo; or if his police had been a little more cautious, a little more decent, and a little more discriminating; or if he had followed the example of more sagacious despots, and confiscated the property of the rich and noble to squander it in largesses among the needy and the envious,—he might not improbably have had a large numerical majority in his favour. But would he for that have been one whit more worthy of the crown? Would his dethronement have been one whit less righteous or less imperatively commanded by the *salus populi*? Would he have been any less the perjured monarch and the cruel tyrant—the gaoler of Poerio and Settembrini, the crucifier of the wretches found in the dungeons of Palermo?

Or, if the Priests of the Roman territory had been, as many Priests are, wise in their generation and crafty in their calling; if, without being less narrow or less vicious, they had been simply less stupid, what would have prevented them from having as boundless and unquestioned a control over the ignorant peasants of Romagna and the miserable populace of the towns, as the Irish Priests had over their flocks in the earlier days of O'Connell? What would have been the result of universal suffrage *then* in the Estates of the Church? Would 99 out of every 100 then have voted for a united Italy under an excommunicated Prince? Yet would the amalgamation have been one iota less necessary or less serviceable to the real interests of all classes of the country? Would not the fallacy of universal suffrage have stood out plain to all eyes, if it had decided for a sacerdotal domination and a divided land?

Or, finally, if the innate animosity of race had been less decided and less embittered than it is between Germans and Italians; if the Austrians had been as skilful and sagacious in Venetia as they have been in some other Provinces; if, relieving the cultivator and the artisan from all dispensable taxation, they had made the leaden grasp of their oppressions and extortions press exclusively upon the middle and upper ranks; if the *only* charge against their rule (as it is far the heaviest) had been that they smothered all light, debased all education, crushed out the last germs of self-government, and quenched in blood or in prison the purest and most legitimate aspirations of freedom and intelligence;—would not every competent and every good man have felt as earnestly as now that such a Government was about the heaviest and most destroying curse that could lie upon a Nation's life? But what would the ballot-box have said then? Would the feeling of the suffering and the wise have found echo and utterance in the voice of the flattered and the foolish? Would the few who were right, or the many who were wrong, have given away the Kingdom and the Crown?

Do not let a happy accident persuade us to adopt or sanction an essential error. Do not let the result of universal suffrage in this one instance blind us to the inherent unsoundness of the principle it involves. Do not let its issue here make us forget its operation elsewhere. Because it has given us a free and united Italy, do not forget that it has given us a dangerous and a subjugated France. Because we have once seen it gleam in the hands of Liberty, do not let us forget that it is, eternally and essentially, the surest weapon in the hands of Despotism. A clever tyrant need never find any difficulty in playing off numbers against intelligence, or in suppressing the action of the competent and enlightened few by the votes of the ignorant, prejudiced, and manageable many.

THE SIMILAR EFFECTS OF GIVING NO POLITICAL POWER, AND THE WHOLE POLITICAL POWER TO THE WORKING CLASSES.

MR BRIGHT AND MR MACKAY ON STRIKES IN ENGLAND AND AUSTRALIA.

Mr Bright has written this week a very temperate and able letter to a manufacturer in Blackburn, on the apparent impossibility of instructing working men in the true relations of wages and capital. As was to be expected, Mr Bright does not refer this difficulty chiefly to intellectual causes. He believes that the working classes are neither more nor less prejudiced than other classes in questions closely affecting their own interests, and no doubt he is right. It is not so long since the most intelligent manufacturers themselves believed, and openly avowed the belief, that their interests were diametrically opposed to those of the landowners on the question of the Corn Laws. We cannot reasonably be impatient therefore if the working classes fall into similar errors, and do not grasp that true unity of interest which ought to identify the aims of labourer and capitalist. Again Mr Bright sees clearly one real obstacle to the growth of a more instructed judgment on social questions among the working classes,—their exclusion from all practical influence over the political interests of the nation. Here again we agree with him. However much the League might have done for the cause of Free Trade, we are quite sure that the country party would never have been convinced of their theoretic errors so soon as they were, had not their representatives discussed fairly and freely with the representatives of the rest of the nation the issues at stake. It is not easy to overestimate the effect of these fair discussions between the ablest advocates of both parties, in any great national controversy. When the leaders have been heard, have been permitted to put forth their best strength, and have been fairly vanquished, the followers are, if not satisfied, at least pacified. Moreover, they are conscious of weak points in their position of which they would never have been convinced without this combat on an equal field. They begin to admit that 'there 'is much to be said on both sides,'—that 'it is 'a difficult question,' and 'they suppose the other 'side must have its fair trial.' Their state of mind is wholly different from that of men who know that their opponents have never met them face to face, though each party, in its own class assemblies, may have had plenty of opportunities for "putting down" its antagonist. In the former case they have pleaded their cause before the nation and lost it. In the latter, while every party-meeting has stimulated their conviction that they *deserve* success, they have been debarred from the opportunity of struggling for it. We agree, then, with Mr Bright that there would be far more chance of preventing suicidal struggles between Labour and Capital, if the labourers' representatives had access to the same political influence, and were allowed to lift their voices in the same national assembly, with the capitalists. Not only would the particular dispute gain a fair hearing,—but common national interests would begin to engage both labourers and capitalists, and drown much of the animosity of a relation which at present hinges exclusively on this one point. If there were great common national ends for which the Working Classes would often combine with the Capitalist or Landed Classes against other sections of their own, and other sections of the middle, and higher, orders,—the intensity of this monotonous struggle must necessarily be relaxed. A man who has once combined with a rival for a great common end, can never give exactly the same edge to his antagonism again.

But if there is, as we believe, much truth in Mr Bright's position on this subject, how are we to reconcile it with the assertion of Mr Mackay in the *Times* of Thursday, that in Melbourne, "where the population is in full enjoyment of "universal suffrage and vote by ballot," the intensity of the class-antagonism between labour and capital is even greater than in England? We reply:—because exactly the same effect may be and must be expected from the effects of

"universal suffrage," as we see in England from the effects of an exclusive middle-class suffrage. Mr Bright's point is that the working classes in England have no community of political action with the class above them,—no greater interests in which class-rivalries may merge,—no fair field on which to discuss fully the differences which divide them. And we cannot deny that he is right. But exactly the same objection applies with even greater force to Australia. If you turn an unfair political constitution upside down, it must be unfair still. If, to adopt Mr Bright's forcible and eloquent language, there are now "two nations in one country "having different ends and adverse sympathies," you do not mend the matter by simply turning them topsy-turvy,—snatching all the power from the most instructed, and handing it over to the least instructed. Of course the same result follows in Australia which Mr Bright deplores in England. Of course where the working classes have all the political power, and the middle orders have no source of influence but their capital, they will fall back upon that capital, and the war will rage as fiercely as before,—the only difference being that the labourer has the political field to himself instead of the capitalist;—and that Wealth and Education, eager to win their due influence, have to buy it in the market, instead of wielding it legitimately in virtue of the constitution.

Cannot Mr Bright see that, for the purposes of his argument, what is wanted is a real meeting ground of all the great classes of the nation on equal terms;—and that this can never be effected so long as any one class can be excluded by the political preponderance—to whatever cause it may be due—of the others? Cannot he see that if we want to engage the different classes of a country in common political interests, we must take care that all these classes shall have a voice in their interests? When A is unjustly subjected to the arbitrary will of B, did any one ever hear of the reconciling effects of inverting the relation by subjecting B to the arbitrary will of A? That experiment has been tried in Australia and the United States, and probably in no countries in the world is there less real identity of political feeling between the higher and lower classes,—the educated who are not represented, and the uneducated who are. It is a strange expedient for bringing two mutually suspicious classes, of very unequal numerical strength, to a better knowledge and understanding of each other's views, to clear the field for a mere contest of numerical strength, holding out supreme power as the reward of the victor. This, we believe, is Mr Bright's recipe; but we must say that the reason which he expounds for it, is not only far better than the remedy which he recommends, but, properly understood, shows that remedy to be worse than the disease. If there must be political servitude, we should prefer a master who is intelligent and cultivated to one who is not. But, if Mr Bright will ponder well Mr Mackay's letter, we believe he will come to the conclusion that the reply is not only consistent with the assertions which provoked it, but that they are opposite views of the same great truth. He will see that while he has been eloquently demanding a bridge over the great gulf between class and class, he has been pratically *agitating* only for an exchange of sides between the two. He would bring the beggar to the advantageous side of the gulf for this world's power as well as that of the next, and send the rich man to the penal side. But there would be the gulf between them still. Let him ask in future only a fair *share* of political power for the working classes, and he will be able to face boldly the political phenomena of Australia, Canada, and the United States, and only gather from them fresh reasons for his claim.

THE WORKHOUSES AND DESTITUTE INCURABLES.

In England the extremest degrees of wretchedness are by no means the most certain to gain compassion. It is a practical country, and almost all our philanthropic efforts are devoted to efforts by which *something may be done* for those who are the objects of it, and the greater the results that can be effected by charitable institutions, the more successful they usually are. An Orphan Asylum, a Hospital, a Ragged School, a Reformatory, a Female Refuge, an Asylum for the Blind and Deaf and Dumb,—all such institutions appeal, and do not appeal in vain, to English charity. We are keenly sensible to the satisfaction of struggling with and vanquishing the physical and moral diseases of our social life; but those extreme degrees of misery for which there is no help,—in dealing with which there can be no success,—in which alleviation is all that even hopefulness itself can look for, have probably far less than their due share of attention amongst us. We do not like to dwell on evils that baffle al, our efforts, and are but too willing to adopt the view that with regard to absolutely inevitable evils, a little more or a little less of temporary intensity is scarcely worth considering,—that where nothing really effectual *can* be done, nothing need be done at all.

A remarkable instance of this deficiency in our philanthropic institutions, which, as a class, perhaps few countries could rival, has been recently pointed out both in a paper which excited much interest at the Social Science meeting at Glasgow, and in an able letter to the *Times* of Friday, November 9th. It appears that no less than 80,000 people die yearly of incurable diseases. Of these, more than half are of the poorest class. The hospitals reject these patients. They say in effect, and say quite justly, 'We can do nothing effectual for you, and those for whom we can do something effectual have more real claims upon us. Our arrangements are all made, the principal cost of them is incurred, to provide scientific aid for diseases which science can cure. We cannot afford to reject many temporary and curable patients for the sake of alleviating the pangs of one incurable patient. For that purpose a very different and much less costly machinery would be quite as adequate,—and the true economy of philanthropic efforts demands that your wants should be separately provided for,—and that you should not be allowed to cripple the effectiveness of machinery intended for a different purpose.'

On this very just principle the ordinary hospitals do not retain incurable patients. When once the medical men are convinced that no progress is to be looked for, they are obliged to retire in favour of those who may receive more substantial benefit from the treatment. The only refuge of the really destitute is then the Infirm or Sick Ward of the workhouse,—and here all the arrangements are made again with another view, the discouragement of improvident pauperism. The ordinary sick pauper is not, and no doubt ought not to be, provided with all the comforts and attendance of a hospital patient. The latter is supposed to be the victim of misfortune only, and no frugality would have enabled him to provide for himself, in case of sickness, treatment and care so effective; but the ordinary sick pauper is merely experiencing one of the many disadvantages of improvidence or extravagance, —the discomforts of falling ill in a dependent position and among strangers. The wholesome severity of the Poor Law system in this country requires that even the sick and infirm wards of the poorhouse should not be what they might be, if the tenants of it were usually the proper objects of unmixed compassion.

But it is quite different with the sufferers from incurable disease who have been incapacitated solely by such disease. To all the claims of ordinary hospital patients, they add the still greater claim on our compassion that they cannot entertain hope even for themselves. They know their fate,—lingering pain till death releases them. And yet the only refuge with which we provide them is the wretched sick ward of a workhouse. There is but one hospital for incurables, we are told, in this country. Out of some 30,000 or 40,000 destitute and incurable sufferers, 110 are provided for at Putney. Surely this is a blot on English philanthropy.

The remedy suggested is a very simple one:—that in every workhouse large enough to fill such a ward, there should be set apart a separate ward for this class of patients, and that from it, by permission of the guardians,—of course not at the public expense but by the resources of voluntary private charity,—all aspects of rigour and penalty should be sedulously removed, while all the comforts and little luxuries which the best class of hospitals could provide should be introduced into it.

We do not see that this admirable scheme is open to any just criticism. It has many economical advantages over the establishment of separate institutions for such a purpose. As paupers, the objects of such a charity are entitled to such public relief as all paupers receive, though they have claims

on us for something more. In this way no call would be made on the public rates which is not made at present, and yet the accidental hardship which the Poor Law system inflicts in these most lamentable cases would be remedied. The plan suggested would avail itself of, without increasing, the enforced contributions of all classes to the aid of the poor, and would relieve the necessary stringency of all Poor Law arrangements by the voluntary charities of all who can afford it. And most justly does the writer in the *Times* say that it is not a trifling matter to relieve the agonies of these most wretched because hopeless patients who suffer from such diseases as consumption, dropsy, or cancer.

THE NEAPOLITAN AND SARDINIAN TARIFFS.

It is well known that King Francis, in the last moments of his undisputed rule, and while Garibaldi was still planning what was then thought his mad enterprise, made one of those efforts "to give prosperity to his people and a Government "as honest as they have a right to," which alone he could justify to his royal conscience as not inconsistent with his resolution "to be a king and always." He could not profess to give them any power of judging for themselves, but he could sometimes "take upon himself the care of their "welfare"; and on 1st and 15th March and 1st May of the present year he signed three decrees tending to liberalise greatly in some important respects the Neapolitan Tariff. It has even been supposed that the Sardinian annexation will, by substituting the Sardinian for the Neapolitan Tariff, introduce a retrograde step into the Neapolitan dominions, and leave the expelled King the boast that his more popular relative and successor understands less of the theory of enlightened statesmanship than did the arbitrary Cabinet of the last Bourbon. This, however, is a great mistake. That the decrees of March and May were real reforms is true enough. They greatly diminished the duties on the importation of metals and metallic manufactures, cutlery, &c. They greatly reduced the duty on sugar and on oils. They reduced materially the duties on a great number of comparatively trifling articles of manufacture, on which the duty weighed very oppressively and very unnecessarily, as they were not of a kind to yield any large revenue. But these decrees did not touch at all the more important articles of export and import,—excepting the metals, and sugar and coffee,—with respect to which the Neapolitan Tariff was most protective and most objectionable. They dealt not at all with the raw materials,—cotton, wool, silk,—nor with the principal manufactures made from these raw materials, nor with the very oppressive timber duties. The main test of the liberality of an Italian Tariff is its impost on silk manufactures and on timber. With regard to both these articles, the old Neapolitan Tariff was highly protective, and remained so after the decrees of March and May. In short, the result of a very careful comparison of the amended Bourbon Tariff with that of Piedmont satisfies us that Naples will gain immeasurably by the change, even though 10 per cent. on the Sardinian duty should be added in the Two Sicilies, as Garibaldi's October decree contemplated,—for the sake, we suppose, of defraying the expense of organising the new kingdom. There is but one article of primary importance (tea) on which, as far as we can discover, the Neapolitan Tariff is more liberal than the Sardinian,—and with regard to that no change was made in the decrees of March and May last. The more carefully we examine the Sardinian Tariff, the more clear it becomes that it is in all main essentials a non-protective one: the Neapolitan Tariff, on the other hand, even as amended, remained in all essential respects a protective system. We compare in the following table the duties on the more important articles,—giving only specimens in the case of the metals:—

	Old Neapolitan.	Neapolitan Decrees of March and May, 1860.	Sardinian Import Duties.
Grain	per 200 lbs 3s 5½d in national vessels; 6s 10½d in foreign vessels	no change	free
Sugar	per 200 lbs £2 11s 6¾d	per 200 lbs £1 5s 9¼d	per cwt (112 lbs) 7s 7d
Tea	per 200 lbs 6s 10½d	no change	per lb 6¾d
Coffee	per 200 lbs £2 1s 3d	per 200 lbs £1 7s 6d	per cwt (112 lbs) 14s
Wine	per botta or ¼ pipe £6 3s 9d, say 1s 3d per gallon.	no change	per gallon 4¼d to 6d
Tobacco	mostly prohibited	no change	mostly prohibited
Timber	prohibited for building—both imports and exports	no change	rough timber or merely hewn 1 per cent. ad valorem import duty; 4 per cent. ad valorem export duty
Iron and steel manufactures, agricultural implements, &c	per 200 lbs 15s 5½d	per 200 lbs 10s 3d	per cwt (112 lbs) 4s 9d
Lead in pigs	per 200 lbs 8s 7d	per 200 lbs 4s 5¾d	per cwt (112 lbs) 2d.4
Copper in pigs	per 200 lbs £1 2s 4d	per 200 lbs 17s 2¼d	per cwt (112 lbs) (in cakes) 4d.8
Copper in sheets	per 200 lbs £1 14s 4¼d	per 200 lbs £1 6s 5¼d	per cwt (112 lbs) 3s 2d
Cotton (raw)	per 200 lbs £1 14s 4¼d Levant and Bengal; £3 8s 9d other kinds	no change	free
Cotton (stuffs)	per yard 11 11-80d	no change	per lb 4¼d (unbleached cotton stuffs)
Wool (raw)	per 200 lbs 15s 5¼d	no change	free
Wool manufactures—Stuffs, serges, &c	per yard 1s 1¾d	no change	per lb 1s 0¾d
Broadcloth	per yard 6s 10¾d	no change	per lb 1s 0¾d
Silk (raw)	per 200 lbs £2 16s 8¾d	no change	per lb 1d to 4¾d
— manufactures	per lb 9s 1 29-40d	no change	per lb 5s 4¾d

This table will sufficiently prove that even if the Sardinian duties be increased by one-tenth for the newly annexed kingdom, Naples will be greatly the gainer by the result. The decrees of March and May were not only spasmodic efforts, and vain spasmodic efforts to gain popular credit, but they did not reach anything like the limits to which the Free Trade principle has already attained in Sardinia under Count Cavour.

THE IMPUGNED DESPATCH.

The Foreign Secretary, in his speech at Salters' Hall, and a daily contemporary in its impression of yesterday, have alluded to our article of last Saturday in terms of pretty explicit disapproval. But both objectors would appear to have misconceived our comments, and have certainly evaded our argument. We counselled "reticence"—not "disguisal of "the truth." We deemed Lord John unwise, not in speaking plainly, so much as in speaking needlessly. We criticised him, not for writing bold despatches, but for writing inconsistent ones. We blamed him, not for approving of the march of Victor Emanuel to Naples—for we had defended that step ourselves—but for justifying it on grounds so questionable, so dangerous, and so needlessly broad, that his despatch will be a thorn in the side of every future Foreign Minister, and may greatly embarrass, on most critical occasions, the foreign policy of England. It was not the practical conclusions which he drew, but the theoretical principles he laid down, that called forth our objections;—and those objections, we take leave to repeat, neither Lord John nor his advocate have even attempted to refute.

Agriculture.

A GENERAL OUTFALL BILL.

We are glad to learn from the letter of a correspondent which we give below, that some landowners are about to make a combined and business-like effort to obtain a general measure for improving the outfalls necessary to the draining of many important agricultural districts. No time can be more favourable for such an effort than the present. Never before were the advantages of well-drained land, or the evils of the want of drainage, made more apparent than during the last twelve months. We entirely agree with our correspondent's remarks that the improvement of land in England offers an ample field for the profitable employment of capital. We wish every success to the efforts which our correspondent and his fellow landowners are about to make. Such is the course of action we wish to see our English proprietors enter upon for the development of their property, for there is no property in this country which possesses greater capacity for development than its agricultural land.

The following is our correspondent's letter:—

GENERAL OUTFALL BILL.

TO THE EDITOR OF THE ECONOMIST.

Sir,—As I observe from your remarks upon drainage, on the 3d inst., you take an interest in this subject, I should esteem it a favour if you would announce that it is the intention of certain landholders much interested in obtaining better outfalls for their estates, to call a meeting of agriculturists, engineers, and other persons next month, in London (the time and place of which will be duly announced), to take into consideration the present state of the drainage, and to ask the Government to prepare a bill which will secure sufficient outfalls, and for other purposes. It has become an acknowledged fact, that all low grounds require under-draining to render them profitable in these days of high taxation; a large return, moreover, is received from a judicious expenditure upon such works. Land draining, however, and laying out money in cutting drains, are not always synonymous. It is now beginning to be felt that large sums have been, with the best intentions, ill spent; the works having been commenced at the wrong end, instead of outfalls of sufficient width and depth, being cut upwards, to carry off the water, from an area capable of being dried by such main drain or drains. To effect this, it will not only be necessary to pass a general Act, but also to repeal a number of local ones, for how stands the law at present? Act 9th and 10th Vict., chap. 101, empowers the Treasury to advance 5,000,000*l* to landowners for drainage purposes; but other Acts, very little known, but in full force, prevent their applying this money to any great profit,—*e. g.*, I may mention the Market Weighton Drainage and Navigation Act, passed in 1772, with the double object of draining and navigating a large district! the consequence being the impossibility of draining it, if even the whole five millions were expended, such an Act remaining unrepealed. The Economist is a journal well calculated to unite the monied with the landed interest, the first requiring investments for their capital, and the second funds to bring out the resources of their estates. There is not better security in the world than English green fields, under the various Acts passed for draining them, such loans taking precedence of all charges with the exception of tithes; but it will be a national loss if estates are still attempted to be drained without reference to each other, and without proper outfalls. The difference between the amount of the produce of the low lands in England thoroughly or imperfectly drained, not being a question of thousands of pounds, but of millions, therefore in behalf of townsfolk, as well as countryfolk, I entreat your co-operation in this movement.—I have the honour to be, Sir, your obedient servant, LOWLANDER.

HORSE BREEDING.—THE ARAB.

Though racing men and the breeders of thorough-bred horses for the turf seem to have come to the conclusion that nothing is to be gained by any fresh introduction of Eastern blood into our breeding studs, we are by no means sure that such conclusion is to be absolutely justified. At all events, for the purpose of ordinary saddle-work, the Arab horse possesses many points which we would gladly see more fully and generally developed amongst our English horses.

Thus Captain Henry Shakespeare in his recent work tells us, when describing the points of the highest caste Arab horse and comparing it with the English thorough-bred, that the Arab's "shoulders are not so flat and thin, and he is thicker through in these parts generally for his size than the English thorough-bred horse. His girth does not show so deep; that is, he does not look so deep over the heart; but between the knees and behind the saddle where the English horse very often falls off, the Arab is barrel-ribbed, and this gives him wonderful endurance and great constitutional points. This also prevents him from getting knocked up in severe training, or under short allowance of food and in long marches." Now would not points of this kind be worthy of the attention of our breeders of race horses? Certainly for hunters the points are all important. It seems some of the fastest Arabs have their fore-legs very much under them; indeed, so much so, that no judge would buy an English horse so made. Yet, whether it be that this form admits of the joints between these bones becoming more opened, when the horse extends himself, or whatever be the cause, it is a fact that blood horses thus made are almost always fast horses. The upper part of their shoulder-blade seems to run back under the front part of the saddle, when they are going their best. This formation is most common in the lower-sized Arab, and apparently makes up to him for his deficiency in height. The very finest actioned Arabs have had this peculiarity of form. They are rather apt to become chafed at the elbow-points by the girths, and almost require to have saddles made on purpose for them." Another strong point in the Arab is the fore-leg. "The fore-arm is strong and muscular, and is pretty long; the knee square, with a good speedy cut for the size of the animal, equal to the English horse; while below the knee the Arab shines very conspicuously, having a degrée of power there, both in the suspensor ligaments and flexor tendons, far superior, in proportion to his size, to the English horse. These are distinct and away from the shank bone; they give a very deep leg, and act mechanically to great advantage. The bone looks small, but then it is very dense, the hollow which contains the marrow being very small, and the material solid, more like ivory than bone, heavy, and close-grained. The flexor tendons are nearly as large and thick as the canon bone. The pasterns and their joints are quite in keeping with the bones above them, and are not so long, straight, and weak as those of the English horse. The feet are generally in the same proportion." Now, these are points in which the great mass of English horses might derive improvement from the Arab; and, notwithstanding the Arab's deficiency in size, it would be well worth while to obtain such fore-legs, even at the expense of some diminution of size. Every horseman knows that horses with good fore-legs, short bodies, and round barrels, are capable of extraordinary exertions, and such are the strong points of the Arab.

The sale of the stud of the late Viceroy of Egypt, which is to take place near Cairo on the 10th of December next, seems to offer to English breeders and horse-buyers the opportunity of selecting some valuable Arabs and other horses of Oriental breeds which ought not to be neglected. The catalogue of horses of high breeding is as follows:—"33 stallions (one of these was bought of Colonel Blood for 4,000*l* sterling); 137 mares of Arabian and Syrian stock; total, 170. 51 colts entire, and 59 fillies, produce of the above; total, 110. 2 mares highest Egyptian breed, and 52 stallions, ditto; total, 54." They are to be sold by auction.

Literature.

A Journey in the Back Country. By Frederick Law Olmsted, Author of "A Journey in the Sea-board Slave States," "A Journey in Texas," "Walks and Talks of an American Farmer in England," &c. Sampson Low, Son, and Co., 47 Ludgate hill.

[SECOND NOTICE.]

In last week's number we gave a brief and inadequate review of the results of Mr Olmsted's inquiries into the workings of slavery in the Southern States. We now come naturally to the question,—How, since it is proved to be prejudicial to the true interests of all classes, slavery may best be remedied? Mr Olmsted devotes a considerable space to this topic. We can only give the outline of his plan, as much as possible in his own words. "Slavery shall, by general consent, be hereafter confined within its present limits." "As the natural increase of negroes would then in a great measure remain where it is born, any given district would soon be better supplied than at present with labourers." "There is no place in the Union," says a writer in a New Orleans paper, "where one hundred thousand slaves could be so profitably planted as upon the soil of the brave old State of Virginia." It has been, and may with some reason be objected that the increase of slaves thus pent up within narrower limits will much increase the dangers of insurrection. This Mr Olmsted thinks could be met by measures of ordinary caution, such as are clearly neglected under the present system, where on four large estates, numbering one thousand slaves, only four white men were to be found.

It is, however (he continues), the opinion of students whose judgment is most respected at the South, that the slave population, if densely settled, would be less dangerous and more efficiently managed than at present, even without any such precaution as I have suggested, and this opinion seems reasonable. The following is from a memoir on Negro Slavery, written by Chancellor Harper, of South Carolina, edited by Mr De Bow, of Louisiana, in which State it was published but ten years ago, while it is yet exposed for sale by booksellers in Mobile and Charleston without causing their expulsion. Hence it may be inferred that the mob as yet really hold the same opinions:—"President Dew" (whose writings have also escaped being placed on the Index Expurgatorius)—"President Dew," says Chancellor Harper, endorsed so far as regards the safety of the scheme by Commissioner De Bow, "has very fully shown how utterly vain are the fears of those who, though there may be no danger for the present, yet apprehend great danger for the future, when the number of slaves shall be greatly increased. He has shown that the larger and more condensed society becomes, the easier it will be to maintain jurisdiction, supposing the relative numbers of the different classes remain the same, or even if there should be a very disproportionate increase of the enslaved class."

The next thing to be done after restricting slavery within state bounds, is to treat it with the determined purpose of amelioration and future abolition. "The common sense of the South," says our author, "would be seconded by the common sense of the North, and would receive the respect of the world, when it had established a policy the tendency of which would be to encourage slaves to form industrious habits, and exercise intelligence with the hope

freedom and the most complete fair play somewhere else if not here."....."It will be said, of course, that, however practicable in Jefferson's time, nothing of this kind is so now, since the demand for cotton has quadrupled the value of slaves. It is for this reason now practicable, if not before. There is no slave so valuable that he could not make himself more valuable if he knew how, and chose to be more valuable." Let him work out his freedom. "In half a dozen years the difference would be equal to his present value." The process of emancipation may and ought to be gradual, since the mass of slaves are at present totally unfit for unconditional freedom; but that there is no real difficulty in the way of their becoming in time rational and self-supporting men and women, except in the determination of their masters that they shall not become so, may be seen from an instance that fell under Mr Olmsted's notice during his travels in Northern Mississippi. In that region, cotton is not the sole, though still one of the chief articles of culture, and slave labour, though the rule, is not the invariable rule; the slave is, therefore, under more favourable influences than on the large Southern plantations. After a long coach journey over horrible roads, our author and a companion asked for hospitality at the first house they came to (and here we may observe, in parenthesis, that this hospitality, although customary, and always remunerated, was frequently denied to the tired traveller in the "hospitable South"): they were received, and at dusk

The proprietor, who had been absent on a fishing excursion during the day, returned. He was a man of the fat, slow, and easy style, and proved to be good-natured, talkative, and communicative. He had bought the tract of land he now occupied, and moved upon it about ten years before. He had made a large clearing, and could have sold it for a good deal more than he gave for it. He intended to sell whenever he could get a good offer, and move on West.....When he first bought this land he was not worth much—had to run in debt—hadn't but three negroes. Now he was pretty much out of debt, and owned twenty negroes, seven of them prime field-hands, and he reckoned I had not seen a better lot anywhere. During the evening, all the cabins were illuminated by great fires, and looking into one of them, I saw a very picturesque family group: a man sat on the ground making a basket, a woman lounged on a chest in the chimney-corner smoking a pipe, and a boy and two girls sat in a bed which had been drawn up opposite to her, completing the fire-side circle. They were laughing and talking cheerfully.

The next morning when I turned out I found Yazoo (his chance travelling companion) looking with the eye of a connoisseur at the seven prime field-hands, who at half-past seven were just starting off with hoes and axes for their day's work. As I approached him, he exclaimed with enthusiasm:

"Arn't them a right keen-looking lot of niggers?"

And our host soon after coming out, he immediately walked up to him, saying: "Why, friend, them yer niggers o' yourn would be good for seventy bales of cotton, if you'd move down into our country."

Their owner was perfectly aware of their value, and said everything good of them.

"There's something rather singlar, too, about my niggers. I don't know as I ever see'd anything like it anywhere else."

"How so, Sir?"

"Well, I reckon it's my way o' treatin 'em, much as anything. I never had no difficulty with 'em. Hen't licked a nigger in five year, 'cept sprouting some of the young ones sometimes. Fact, my niggers never want no looking 'arter. They just tek ker o' themselves. Fact, they do tek greater interest in the crops than I do myself. There's another thing—I s'pose'd will surprise you—there ent one of my niggers but what can read; read good too,—better'n I can, at any rate."

"How did they learn?"

"Taught themselves. I b'lieve there was one on 'em that I bought that could read, and he taught all the rest. But niggers is mighty apt at larnin', a heap more'n white folks is."

I said this was contrary to the generally received opinion.

"Well, now, let me tell you," he continued. "I had a boy to work, when I was buildin', and my boys just teachin' him night times and such, he warn't here more'n three months, and he larned to read as well as any man I ever heerd, and I know he didn't know his letters when he came here. It didn't seem to me any white man could have done that: done it to you, now?"

"How old was he?"

"Warn't more'n seventeen I reckon."

"How do they get hooks—do you get them for them?" "Oh no; get 'em for themselves." "How?" "Buy 'em." "How do they get the money?" "Earn it." "How?" "By their own work."..... "Ten years ago," he continued, after taking his dram, as we sat by the fire in the north room, "when I had a carpenter here to finish off the house, I told one of my boys he must come in and help him. I reckoned he would larn quick if he had a mind to. So he came in, and a week arterwards he fitted the planks, and laid this floor, and now you just look at it; I don't believe any man could do it better. That was ten years ago, and now he's as good a carpenter as you ever see. I bought him some tools after the carpenter left, and he can do anything with 'em—make a table, or a chest of drawers, or anything. I think niggers is somehow nat'rally ingenious, more so than white folks. They is wonderful apt to any kind of slight."..... I asked our host if he had no foreman or driver for his negroes, or if he gave his directions to one of them in particular for all the rest. He did not. They all did just as they pleased, and arranged their work among themselves. They never needed driving. "If I ever notice one of 'em getting a little slack, I just talk to him; tell him we must get out of the grass, and I want to hev him stir himself a little more, and then, may be, I slip a dollar into his hand, and when he gits into the field he'll go a-head, and the rest, seeing him, won't let themselves be distanced by him. My niggers never want no lookin' arter. They tek more interest in the crops than I do myself, every one on 'em."

Religious, instructed, and seeking further enlightenment; industrious, energetic, and self-directing; well-fed, respected, and trusted by their master—and this master an illiterate, indolent, and careless man! A very different state of things, this, from what I saw on the great cotton, planter's estate, where a profit of 100,000 dollars was made in a single year, but where 500 negroes were constantly kept under the whip; where religion was only a pow-wow cloak for immorality, and where the negro was considered to be of an inferior race, especially designed by Providence to be kept in the position he then occupied! A very different thing; and strongly suggesting what a very different thing this negro servitude might be made in general, if the ruling disposition of the South were more just, democratic, and sensible."

There would seem to be no alternative between the restriction of slavery within its present limits, and the reopening of the African slave trade. We hope there is little doubt as to which alternative will be chosen in the North; and it is encouraging to find so careful an observer as Mr Olmsted of opinion that a determined position assumed by the Northern Free States would not lead to the disruption so much deprecated there. "Nothing like a war in earnest is presumed by those whose voice renders the threat of secession worthy of our notice." Perhaps we may be inclined to think him a little sanguine when he says:—"Now I see no cause for alarm, but every hope of a peaceful end of our great national squabble, in the most violent and solemn determination for dissolution and war which can be exhibited at the South"; but no one can refuse to join in the hope that so cheerful a prognostic may come true.

There is but one point more, out of the numerous subjects of reflection suggested by the volume before us, upon which we can dwell here. The restriction of the area of slavery would leave the fertile lands yet unsettled by what our author justly calls "petty negro kingdoms" to the cultivation of free white labour. Is there ground for hope that by such labour the "increasing demand for cotton" can be met; or is Mr Russell correct when he asserts that after all the system of slavery is a necessary evil attending upon the great good of cheap cotton? We will not dispute here the relative merits of cheap cotton, and of a system that demoralises and lays waste the nation and country that uphold it; perhaps in the end true economy will but find itself promoted by such cheapness. Cheap cotton is, however, undoubtedly a great good. The question as considered by Mr Olmsted, and with which alone we are at present concerned, is, whether it may not be equally cheap and equally abundant under a free as under a slave-labour system. Mr Olmsted's opinion that it both may and will be so, if the incubus of slavery that paralyses all free industry with which it comes in contact were once removed, is decided. It remains for us to indicate upon what facts this opinion rests.

Three arguments are most frequently brought forward in support of the theory that slave-labour is essential to the growth of cotton. One is founded on the unhealthiness of the rich low lands, on which cotton grows most freely, for white settlers. Mr Olmsted thinks that in the first place the unhealthiness of these regions is overrated, and that in the second the black race suffers almost as much from such a cause when it is real as the white. Mr Russell, in his "North America, its Climate, &c.," refers to the "alluvial lands on the banks of rivers" as being so "unhealthy for white labourers, that the slave-owners occupy them without competition.' Mr Olmsted, in reply, asks:—

How would he explain, then, the undoubted salubrity of the bottom lands in Louisiana, which are lower than those of the Mississippi, exposed to a more southern sun, more swampy, and which were originally much more frequently flooded, but having been dyked and "leveed," are now inhabited by a white population of several hundred thousand?..... The unacclimated whites on the sea-coast, and on the river and bayou banks of the low country, between which and the sea-coast there is much intercommunication, suffer greatly from certain contagious and infectious pestilences. This, however, only renders the fact that dense settlements of whites have been firmly established upon them, and that they are remarkably exempt from miasmatic disease, one of more value in evidence of the practicability of white occupation of the upper bottom lands. There are strong grounds for doubting the common opinion that the negroes at the South suffer less from local causes of disease than the whites. They may be less subject to epidemic and infectious disorders, and yet be more liable to other fatal diseases than whites. The worst climate for unacclimated whites of any town in the United States is that of Charleston.....It happens fortunately that the most trustworthy and complete vital statistics of the South are those of Charleston. Dr Nott, commenting upon these, says that the average mortality during six years has been of blacks alone, one in forty-four; of whites alone, one in fifty-eight. "This mortality," he adds, "is, perhaps, not an unfair test, as the population during the last six years has been undisturbed by emigration, and acclimated in greater proportion than at any previous period." If the comparison had been made between native negroes and native or acclimated whites alone, it would doubtless show the climate to be still more unfavourable to negroes. Upon this very district to which Mr Russell refers as offering an extreme case, I quote the testimony of a Mississippi statistician:—"The cotton planters, deserting the rolling lands, are fast pouring in upon the swamp. Indeed the impression of the sickliness of the South generally has been rapidly losing ground (*i.e.* among the whites of the South) for some years back and that blessing (health) is now sought with as much confidence on the swamp lands of the Yazoo and the Mississippi as among the hills and plains of Carolina and Virginia."—De Bow's "Resources."

Another assumption is that slavery admits of that organisation of numbers "so serviceable in the culture of cotton." In Mr Olmsted's view, the culture of cotton greatly resembles that of corn; requiring, in perhaps a somewhat higher degree, careful and constant culture, and a good supply of hands at the time of harvest. Slavery has, for him, little advantage on the first head, since the almost entire absence of intelligence in the labourers makes up in a great degree for their compelled assiduity; and on the second, the impossibility of obtaining extra hands (as in the corn harvest in the Northern States, or the hop harvest in Kent,) compels a planter, "if he needs an additional slave-hand to those he possesses, even if temporarily, for harvesting his crops," in most cases to "employ at least a thousand dollars of capital to obtain it."

For further exemplification of the bad economy of slave agriculture we must refer the reader to Mr Olmsted's clear and excellent exposition, and pass on to the final consideration urged usually against the employment of white men, "that the necessary labour of cotton tillage is too severe for white men in the cotton-growing climate." "The recent German settlers in Texas and in South Carolina, says Mr Olmsted, "the whites on steamboats and railroads, and in trade, the white workmen in New Orleans, as well as thousands of exceptional, hard-working, and successful labouring Southerners, testify that the climate is no preventive of persevering toil by the white race in any part of the Slave States. In fact, I have seen more white native American women at work in the hottest sunshine, in a single month, and that near midsummer, in Mississippi and Alabama than in all my life in the Free States, not on account of an emergency, as in harvesting either, but in the regular cultivation of cotton and of corn—of cotton chiefly." And again he says: "I have seen a weakly white woman the worse for her labour in a cotton-field, but never a white man, and I have seen hundreds of them at work in cotton-fields under the most unfavourable circumstances—miserable, dispirited wretches, and of weak muscle, subsisting, as they chiefly do, on corn bread. Mr De Bow estimates 100,000 white men now engaged in the cultivation of cotton, being one-ninth of the whole cotton force, numerically, of this country. I have just seen a commercial letter, from San Antonio, which estimates that the handful of Germans in Western Texas will send 10,000 bales of cotton, the production of their own labour, to market this season. If it should prove to be half this, it must be considered a liberal contribution to the needed supply of the year, by those who, following Mr Russell, have considered Western Texas out of the true cotton region, and taking the truth of the common planters' assertion for granted, have thought Africans working under physical compulsion the only means of meeting the demand which could be looked to in the future of the United States."

One advantage of the use of free labour is the superior cleanliness of the cotton prepared for the market. "I was informed by a merchant that the cotton picked by the free labour of Germans was worth from one to ten cents a pound more than that picked by slaves in the same township, for its greater cleanliness." "I observed this advantage of the free-labour system exemplified in Western Texas, the cotton-fields in the vicinity of the German village of New Braunfels having been picked far closer than any I had before seen,—in fact, perfectly clean"; while on slave plantations he had seen what was confessed to be many hundred dollars' worth of cotton broken down upon the trees in preparation for the planting of the new crop; and while the quality of what is gathered in is impaired by the most careless treatment, if not by wilful dishonesty, in order that the weight and number of the bales may be increased, even by sand, mud, or stones. In a letter from a cotton-planter in the "New Orleans Price Current," there is this sentence:—"Your overseer is after quantity, Sir, and the more extra weight he gets in your cotton, the more bales he will have to brag of having made at the end of the year. Don't trust him at the gin."

"Why will not the cotton-planter," says the same writer, "take pride in his own production? The merchant prides himself on his wares, the mechanic on the work of his hands. All seem to pride themselves on the result of their labour, except the cotton-planter."

The reason will be plain enough to any one who studies Mr Olmsted's work—a reason deep-seated in the very nature of the slave system, and which, with all the other evils attendant upon that system, can only be palliated as long as it is retained, and effectually cured only by its extinction.

We have dwelt long upon this valuable work, yet we have left untouched a large part of its contents. We can only cordially recommend it to the attentive perusal which it so well deserves.

THE NORTH BRITISH REVIEW. No. LXVI. T. and T. Clark, Edinburgh.

THE "North British" keeps up its old character under its new publishers. In their prospectus, the Messrs Clark style their Review "in the main a literary journal"; and in this number we have three literary papers, two of which are of more than average goodness. Far the best is that on Leigh Hunt, a writer whose exquisite and peculiar genius has not yet received adequate investigation, but who here meets with a well-merited critique,—full, rich, and appreciative, and differing as widely as possible from the snarling, captious, and insensible criticism so much in vogue at the present day. "Lord Macaulay" is a very able essay, in clearness and thoroughness within its own range reminding us a good deal of its subject. It is the best defence we have seen of Macaulay's historical judgments and literary style; but the writer goes, perhaps, a little too far in citing Mr Thackeray's estimate of Marlborough in corroboration of Macaulay's. With all respect for our eminent novelist, we imagine it is more than probable that his agreement with the historian arises from his having simply adopted the latter's impression of the character. "American Humour" is more ambitious and less successful, as well as somewhat vulgar and pretentious in tone. It starts with a most unsatisfactory and feebly-fine attempt to draw the distinction between "Wit" and "Humour," and not only fails to do so, with which we might not quarrel much, but shows that the author has very little conception of either, as may be inferred from his placing Hood among the wits and Sydney Smith among the humourists. Many of the things which the author quotes as specimens of American humour are simply specimens of dull and absurd exaggeration. Moreover, there is a very disagreeable vein throughout the whole article of what may be called the "offensively-familiar graphic," showing itself in such expressions as "poor, thin, diaphanous Hood, and irritable, little, pale Pope." The only other article calling for remark in this number is one entitled "Modern Thought—its Progress and Consummation." The title is far too large for the subject, which is the tendencies of recent scepticism, and the subject is far too large for the basis on which the author has rested it, viz., the work of Miss Hennell, which he has taken for his text, and with which alone he appears to be familiar. At any rate he scarcely, if at all, even alludes to the writings of W. R. Greg, F. W. Newman, and Theodore Parker—an unaccountably absurd omission in treating of such a question. On looking back at the article we find that he does once quote Mr Greg; but the fact remains that he is strangely ignorant of, or has wilfully ignored, the very writers whom it was especially incumbent on him to reply to. The following is a pretty good instance of misrepresentation:—

"On all sides it is now admitted—and the apostles of Atheism have freely admitted it—that the Christ of the Evangelists is a real person, in the fullest historic sense; and, moreover, that the splendour of His virtues and wisdom beams forth from these inartificial records. It is granted—or one might say, it has been carried by acclamation—that within these writings there is exhibited an unmatched sample of human nature—a bright reality of goodness and of truth."

Without stopping to inquire whether "carrying by acclamation" is the best mode of deciding questions of theological and moral criticism, we may say that in the face of such works as those of Dr Strauss and Mr Newman, such assertions are false. It is quite right that a review should do what the "North British" professes to do in its prospectus—"maintain the cause of Evangelical Christianity in opposition to the various phases of infidelity and error"; but the best cause is in the long run injured, not served, by an ignorant or intentional misstatement of its adversaries' opinions.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Bank of France on Monday increased its rate of discount to 4½ per cent., in consequence of the augmentation in that of the Bank of England. It was expected that yesterday it would have made a further increase in imitation of the said Bank, but it did not do so. The news to-day, however, that the discount at London has been fixed at 6 per cent., shows it that there is no time for hesitation; and at the moment I write, the "Council of Administration" of the Bank of France is sitting to deliberate on what is to be done. The telegraph will transmit to you the result of its deliberations; most likely it will be the fixing of the rate at the same figure as the Bank of England.

Sudden and rapid augmentations in the rate of discount cause not only inconvenience but serious alarm in this country, because the knowledge of financial matters is not so great as it is in England, because also an increase gives a more serious check to commerce than it does there, and because that check may have *political* consequences. On the present occasion the alarm is greater, from the fact that the mass of the public do not understand why the Bank of France and the other financial establishments of this city should have been making such heavy drains of specie and bullion from England as to necessitate the increase in the discount which has taken place at London. It is known, indeed, that large sums have to be sent abroad to pay for grain; it is understood that the Syrian and Chinese armies may have need

of somewhat considerable amounts; it is known that certain sums have been required to meet calls in foreign loans; it is known that the Comptoir d'Escompte is sending a quantity of specie to Asia to enable its projected branch banks in China and the East Indies to commence operations; and it has transpired that the same establishment has undertaken to place a somewhat large quantity at the disposition of the banks in the French WestIndia Islands, in which islands coin has for some time past been extremely scarce, in fact has almost completely disappeared. All this is known; but all this does not appear to justify the extraordinary demand for gold which has been made on Paris account at London, especially as the Bank of France had 434,000,000f in hand last Friday, and especially, too, as money in the hands of the public was known to be very abundant,—witness the readiness with which the railway bonds and the Credit Foncier loan were taken. Not then being able to explain satisfactorily the motives for seeking such extraordinarily large quantities of the precious metals at London, the supposition is, that the Bank of France sees, and has reason to see, that some grave crisis is about to arrive; and this naturally fills people with alarm.

On the Bourse on Friday and Saturday last prices rose, in consequence chiefly of the "peace speeches" expected and delivered at the Lord Mayor's dinner; but this week the increase of discount at London and Paris has caused a decline. To-day, on the receipt of the news from London of the fixing of the rate at 6 per cent., great caution was manifested. The following are the quotations:—

	Thursday, Nov. 8. f	c		Thursday, Nov. 15. f	c

Some months back I stated that the French Government had proposed treaties of commerce, similar to the one with England, to Prussia as the representative of the Zollverein, and to Belgium; and that the former had received the offer very coldly, the latter with great readiness. Since then communications have taken place between Prussia and France, the result of which has been that the former is now disposed to treat for mutual commercial concessions; and accordingly a high functionary of the French Foreign Department, M. Declerc by name, is about to go to Berlin charged to commence negotiations. As to Belgium, she has for some time past been negotiating with the French Government, and matters are far advanced between them. They have long, you are aware, had a treaty of commerce which has been renewed from time to time, and the last renewal of it is about to expire. The new treaty between them will take the form of a renewal of the old one, but with modifications which, especially as regards coal and iron, will make it nearly the same as the English convention.

The Government is just now causing to be exhibited, for the examination of timber dealers and others, 45 specimens of Canadian wood. This exhibition proves that the Government is of opinion that the wood of Canada may with advantage be brought into more general use in France.

In continuation of its commercial reforms, the Government intends to make a sweeping revision of the export duties, and even to abolish many of them; also to repeal the absurd law which fixes the rate of interest at 6 per cent.

Mention was made in a recent letter of a project for establishing a "Company of Colonial Credit" for the purpose of promoting enterprise in the French Colonies. An Imperial decree has just sanctioned this undertaking. But it appears from a report of the Minister of the Colonies which accompanies the decree, that the new Company is for the present to confine its operations to making advances to planters at interest not exceeding 6 per cent. and for periods not exceeding twenty years, for the purpose of building sugar manufactories, or improving the existing ones. The capital of the Company is, it appears, to be limited to 3,000,000f in 6,000 shares, and is to be regarded as a guarantee one; but it is to issue bonds to the amount of 18,000,000f, and it is by means thereof that it will make its advances. Its mode of operation is in fact to be somewhat similar to that of the Credit Foncier in this country.

In addition to the Credit Company, the Government has sanctioned arrangements between the Discount Bank (Comptoir d'Escompte) and the Colonial Banks, by which the former places considerable resources at the disposition of the latter for the purpose of enabling them to afford accommodation to planters.

The statutes (bye-laws) of the Algerian Railways Company have just been sanctioned by Imperial decree.

The enterprise of establishing Transatlantic lines of steam navigation, which has been in suspense for so many years, and which some time ago was ceded to a firm at Havre with a liberal subvention, is, it is alleged, to be confided to the Compagnie Generale Maritime and to the Credit Mobilier with a subvention of 29,000,000f a year.

The following translation of a notification, just published by the Chamber of Commerce of Havre, may be of interest to persons engaged in the cotton trade:—

A considerable number of firms of Havre thought there were serious reasons for modifying the usages long since adopted in the cotton market. A meeting of mercantile men was accordingly called on the 14th of April last to examine into the question. Some firms opposed in principle any change in existing usages, and declared that they would, for reasons which they gave, abstain from taking part in the meeting.

In a second meeting on the 21st of April, it was resolved to demand the intervention of the Chamber of Commerce, and a letter was addressed to the Chamber requesting it to take the matter up. The minutes of the two meetings, a memoir and a protest of the opponents were annexed to the letter.

Before proceeding to the examination of the arguments presented in support of the two opinions expressed, the Chamber, hoping it would be possible to effect a conciliation, invited the partisans of the two opinions to designate for each three delegates; and, to facilitate the adoption of conciliatory ideas, it begged the honourable President of the Tribunal of Commerce, M. Hermé, to be kind enough to preside over the meetings of those delegates. The delegates were chosen, and in several sittings presided over by M. Hermé the propositions were discussed; but the honourable President saw the impossibility of arriving, except on one single point, at a conciliation; and he announced this result with an expression of regret to the Chamber.

The point on which the delegates unanimously agreed was to modify the classification in use for cotton, and to add to it a new designation, the classification being as follows:—

VALUE ACCORDING TO THE PRICE CURRENT OF 15TH JUNE.

	f		f	
First type	110	to	112	Fine and good merchandise.
Second do.	107		108	Good current.
Third do.	95		...	Current.
Fourth do.	86		...	Lower current.
Fifth do.	79		...	Good average.
Sixth do.	72		...	Average.
Seventh do.	66		...	Low.
Eighth do.	60		...	Very low.

This classification, unanimously adopted by the delegates, among whom on other points very marked differences of opinion prevailed, ought, in the opinion of the Chamber of Commerce, to be accepted; and the Chamber hopes that it will obtain the assent and the adhesion of all interested in the commerce in cotton.

A. LOUEDIN, Vice-President of the Chamber of Commerce.

Havre, Nov. 10, 1860.

The Directors of the Seville, Xeres, and Cadiz Railway announce that they have purchased the line from Xeres to Trocadero, 105 miles long, and that to raise funds to pay for it they issue 50,000 bonds at 250f, but to be reimbursed at 500f by annual drawings in the space of 94 years: the bonds are to produce 15f a year interest.

The Directors of the Services Maritimes des Messageries Imperiales announce that 20f per share on account of the dividend of the present year will be paid from the 1st December next.

The Northern Railway Company advertises that from the 1st January next it will pay 25f on the old and 16f 50c on the new shares,—the said sums consisting partly of interest due, partly of a payment on account of dividend.

A meeting of the shareholders of the Company of the Gas and Iron works of Marseilles, and of the Mines of Portes and Senechas—one of M. Mirès' affairs—was held a few days ago. Among other things, it charged the Directors to examine the inventories and accounts of the old Company presented by M. Mirès; it fixed at 600f the sum at which the old shares should be paid off, and the amount to be annually set apart during the next nine years for the purpose; it decided that shares in the new Company should be substituted for those in the old one, as soon as the aforesaid inventories and accounts should be declared exact; and it resolved that 6f on account of the dividend for the present year should be distributed to the old shares.

Annexed is an account of the markets:—

FLOUR at *Paris*, yesterday, was 62f to 65f the sack of 159 kilogs; four marks, 61f to 61f 25c for the current month; 60f 75c to 61f for December.

WHEAT at *Paris* was offered and prices were at first 35f to 37f 50c the sack of 120 kilogs, but they closed 50c below those of last week. O the provincial markets, 72 have risen 10c to 1f 82c the hectolitre, 26 have fallen from 20c to 2f 9c, 32 have undergone no change, and 28 are firm.

COTTON.—The sales of the week ending Friday, at *Havre*, were 22,340 bales, and the arrivals 511. Closing prices were 1f to 2f higher for very low, low, and very ordinary, and 1f for ordinary and other qualities. Low New Orleans was consequently 94f, and very ordinary ditto 101f the 50 kilogs. This week, business has not been active. Yesterday's prices were 1f to 2f lower.

SUGAR.—Business was rather important at *Havre*, in the week ending Friday: 1,400 hogsheads French West India went at 49f 75c to 50f the 50 kilogrammes; 6,100 casks Havana, 36f to 37f 50c. The arrivals were only 275 sacks from Dunkirk. This week, few sales have been made. French West India, 50f 50c. At *Bordeaux*, last week, business was calm, the most important transactions being 2,000 cases Havana at 72f to 73f the 100 kilogs; a small lot of Martinique, 50f 75c; 1 of Reunion, 51f 50c to 52f. Mauritius, in which nothing was done, was nominally 75f to 76f the 100 kilogs in bond. Nothing done this week. At *Nantes*, last week, transactions were very important: 4,775 sacks Reunion, disposable, went at 52f: another lot of 9,842 at same price; 8,000 expected at 52f 12½c; 11,000 expected, 52f 25c; 2,880 sacks Mayotte, 45f; 5,675 Mauritius, 52f 50c; 4,625 ditto, 53f; various lots of French West India, common quality, 43f 75c; and some small lots of other sorts. This week, a small lot of French West India has been taken at 49f. At *Marseilles*, last week, 16,000 sacks Reunion went at 54f; some lots of French West India and other sorts were also sold.

COFFEE.—At *Havre*, in the week ending Friday, 2,600 sacks Rio for delivery were sold at 70f to 76f 50c the 50 kilogs in bond, and a small lot of inferior Guadeloupe went at 137f 50c to 140f duty paid. The arrivals from 1st January to 31st October were, including the stock on the former date, 26,086 tons, and the quantity disposed of in the same period was 22,131 tons; the stock remaining in hand on the 1st November was consequently 3,955 tons. This stock was exclusive of 6,587 sacks and 412 casks arrived in the port, but not put in bond. This week, sales have not been large: Hayti, 79f; Cape, 82f. At *Bordeaux*, last week, various lots of Guayra, Malabar, and Rio were sold: part of the Guayra at 87f 50c, the Malabar at 111f 50c. Only a small lot of Santiago has been sold this week; prices not given. At *Nantes*, last week, the sole transaction recorded was a small lot of Malabar at 110f. Nothing done this week.

INDIGO.—Business at *Havre*, in the week ending Friday, was very calm, the sales having been only 14 cases Bengal, and the prices given for them were kept secret. The arrivals consisted of some small lots from England. This week a few cases have been sold at prices kept secret. At *Bordeaux*, last week, the sales were 53 cases Madras, 10 Kurpah, 23 Bengal, 26 Vellore. Quotations of Bengal were 12f 50c to 25f 50c the kilogramme; Kurpah, 10f to 21f; Madras, 6f to 11f. Vellore not stated. Nothing important done this week.

HIDES.—At *Havre*, in the week ending Friday, business was not important, the sales consisting of only 1,054 Monte Video salted cow at 73f 50c the 50 kilogs duty paid; 100 Pernambuco drysalted, 96f; 126 Algeria drysalted, at prices kept secret. The arrivals were about 3,000. In the month of October the total sales were 38,000. At *Havre*, yesterday, a sale by auction of a large quantity was commenced, and it went off with great briskness, with, however, on an average, a decline of 5 per cent. on salted La Plata, 10 to 12 per cent. on dry ditto, and a very small decline on Valparaiso.

WOOL.—Business at *Havre*, in the week ending Friday, was not important: 35 bales Buenos Ayres unwashed, 1f 55c to 2f 70c the kilog; 29 Monte Video washed, 1f 90c; 57 Peru unwashed, 2f 65c. The arrivals were 63 bales. This week, some Portugal unwashed has been taken at 80f the 50 kilogs, and some Chili at 1f 27½c the kilog.

TALLOW.—At *Havre*, last week, there were no sales and no arrivals. Nothing done this week at *Paris*. Yesterday, the 100 kilogs were 148f 20c.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. was 99f the hectolitre; Montpellier of 96 deg., 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 105f; beetroot, 110f.

BERLIN, NOV. 13.

It is said that an English Company is in negotiation for the purchase of extensive mines and ironworks in Silesia—particularly those of the Minerva Company.

COMMERCIAL AND MISCELLANEOUS NEWS.

A report from Calcutta, dated the 6th ult., says:—There has been almost no change in the import market during the past fortnight. With the exception of a fair demand for 7 lb shirtings, No. 20 twist, and of No. 40, a few favourite qualities, the same languid feeling has prevailed. There can be little doubt that the high prices of food—rice, dhell, and all other kinds—are the principal reasons for the falling off in the consumption of all descriptions of goods. Exports.—Linseed market quiet, and both European and American buyers are less eager in their operations, and prices have declined 2 to 3 annas from the highest point: they are now firm, and probably will remain so, owing to the short import, unaccountable for the season. Rape also has given way to the same extent, but the great scarcity of good and suitable qualities for shipment restrict operations. Jute—The supply has been more free and abundant, and prices have given way to the extent of 2 annas; they are however still very dear, and the cost much beyond its known value in England. Saltpetre—The successive discouraging advices of the 3rd and 10th of September have at length affected our tenacious refiners, and they have given way to the extent of 6 to 8 annas.

The commercial accounts from Australia by the present mail are less unsatisfactory than for some time past. It is stated that the Victoria Government will not bring forward any more debentures in the London market before April, and that even then they may possibly decide not to do so, as, although they are going on with their railways, they are suspending many other of their public works. Another satisfactory statement is, that orders have been transmitted to settle forthwith the claims of the English shareholders of the Geelong and Melbourne Railway. The line is now in possession of the Victoria Government, and the Melbourne shareholders have already been paid. From Adelaide, South Australia, the dates are to the 25th of September. There had been an increased demand for many articles of import for immediate consumption, but prices were influenced by forced sales in the Melbourne market. Business, on the whole, was healthy, and money plentiful. The prospect of a most abundant harvest was undiminished. Copper remained, firm at 98*l* per ton. Burra Burra shares were steady at 147*l*. The banks issued draughts on London at 2 per cent., and bought bills at par 60 days' sight.

Advices from Jamaica to the 26th ult., state that very little coffee had been brought to market, and that prices ranged from 44s to 46s for good ordinary. Sales of sugar had been made at 21s to 23s for fair, and 20s for middling.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month and of the corresponding period in 1859 are added:—

DEBTOR.	November, 1860.	October, 1860.	November, 1859.

COTTON.

NEW YORK, October 30.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

		Sales.	Closing.		Middling.		Freight.	F.o.b.
New Orleans	Oct. 29	54000	⅛ higher	...	11⅜c	...	9-16d equal to	6.60d
Mobile	27	15000	⅛ —	...	11c	...	⅛d —	6.30d
Charleston	27	10000	⅛ —	...	11⅛c	...	⅛d —	6.24d
Savannah	27	7500	⅛ —	...	11c	...	⅛d —	6.18d
New York	30	20000	unchanged	...	Upl. 11⅛c	...	⅛d —	6.29d
Total		106300 bales					Average	6.32d

New York Market—There has been less doing in this market during the week, partly owing to the quieter state of the Southern markets and partly from buyers waiting for later accounts from Liverpool. Prices became easier under the slackened demand, but with favourable European advices full prices are again paid. The week's sales amount to 20,000 bales, of which half in transitu at last week's rates. Middling Uplands on the spot is worth 11¾c to 11⅞c.

The following is a statement of the movements of cotton for the ast week, and since 1st September, 1859, compared with the five preceding years:—

	Receipts. Week's Receipts. bales	Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. Pts bales
1860-61	102000	534000	45000	11000	4000
1859-60	140000	645000	31000	10000	7000
1858-59	110000	560000	23000	20000	2000
1857-58	38000	249000	30000	6000	4000
1856-57	92000	448000	21000	8000	4000
1855-56	81000	481000	38000	9000	9000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1860-61	121000	35000	19000	175000	446000
1859-60	179000	50000	20000	249000	450000
1858-59	103000	54000	12000	169000	388000
1857-58	87000	19000	16000	122000	162000
1856-57	50000	41000	15000	106000	303000
1855-56	162000	38000	34000	228000	289000

Thus the receipts show a decrease of 111,000 bales from those of last year, and a decrease of 26,000 over 1858-9, and the exports exhibit the following resnlts:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock.
Compared with last year	Dec. 58000	Dec. 15000	Dec. 1000	Dec. 74000	Dec. 4000
Compared with 1858-9	Inc. 18000	Dec. 19000	Inc. 7000	Inc. 6000	Inc. 58000

Southern Markets by Telegraph—Business at the South has been somewhat quieter this week, and prices rather irregular for mixed lists in the Gnlf ports. The week's sales at New Orleans have been 54,000 bales, and at the close full prices were demanded for even running grades with staple. Middling, 11⅜c. At Mobile the business has been limited to 15,000 bales for the week, and prices for the more desirable parcels have been maintained. In the Atlantic markets a further advance of ⅛c to ¼c has been obtained, owing to the comparative scarcity of the better qualities and the low crop views prevailing there. Freights are without change at the Gulf ports, and at the Atlantic the rate to Liverpool is 7-16d to ½d.

Receipts—The receipts are again on the increase, and for the present week, by mail dates, amount to 102,000 bales against 79,000 bales last week. The total is now 534,000 bales against 645,000 to same date last year—a deficiency of 111,000 bales. By telegraph for the following week the receipts at New Orleans were 65,000 bales against 64,000 bales same period last year. The deliveries have thus far been restricted by low rivers, and the Mississippi is still 14 feet below high-water mark, but our telegram reports the upper streams rising, which, if supported, will cause the markets to be more freely supplied for a time. Exports—The exports also show an increase this week—the clearances to all ports amounting to 60,000 bales. Of this Great Britain will get 45,000 bales, and the total to that quarter is now 121,000 bales against 179,000 to same date last year. By telegraph for the succeeding week, the exports thither from New Orleans and Mobile, jointly, amount to 30,000 bales. To France 11,000 bales have been cleared this week, making the total 35,000 against 50,000 to same time last year. To other foreign ports the total thus far is 19,000 bales against 20,000 last year. The number of vessels now loading at the South is 58 to Great Britain against 76 last year; to France 17 against 18; and to other foreign markets 16 against 17. Freights are unchanged during the week.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by Mr Ollerenshaw, of Manchester.*

The cotton market opened this week with a good demand and firm prices, and for several days a fair amount of business was done. A complete check has since been put to the operations of buyers by the remarkable rise in the value of money in London. Sales have been made during yesterday and to-day at a decline of ⅛d to ¼d per lb from last week's quotations, and in a few quarters there is some anxiety to sell. Our quotations are reduced accordingly. Egyptians have been sold somewhat lower. Brazil are nominally without change. East India are freely offered, and may be bought on lower terms. The sales to-day are very limited, and the market irregular. The reported export amounts to 2,980 bales, consisting of 940 American, 110 Brazil, and 1,930 East India..

MARKETS IN THE MANUFACTURING DISTRICTS.

Although the amount of business doing in goods in the manufacturing markets held this week has not been to say extensive, prices have continued to rule firm, and, on the whole, trade, generally, may be considered in a healthy state. The stocks, with very few exceptions, have not accumulated. The wool trade has been tolerably active, at extreme rates, owing to the limited supplies on offer. Iron has sold to a fair extent on former terms, and coals continue high in price, owing, chiefly, from the large export inquiry.

MANCHESTER, Nov. 15.—We report an almost total cessation of business, in consequence of the rapid advance in the Bank rate. India and China shirtings have nominally fallen in a few days about 3d per piece, yarns for the trade and for export about ⅛d per lb. Even these reductions, though already accessible to buyers, do not induce operations, whilst the contracts on hand seem likely to prevent any quick course of declension from becoming general. It is, therefore, anticipated that the market may continue irregular for a short time, till the stringency in discounting long-dated paper has reached a limit. The enhancement on cotton, now that it may be considered accomplished, has been partly lost on spinning, and wholly lost on manufacturing.

BRADFORD.—The successive rises in the rate of discount at the Bank of England, and the general tightness in the money market, appear to have almost paralysed trade in all branches, and the general improvement which was taking place has been suspended. The makers of light fancy goods are becoming a little more busy, and some American orders have been given out.

HUDDERSFIELD.—Black does and steel mixtures have been accumulating during the last two months, but a clearance is expected at the beginning of next month, when the wholesale dealers usually come from London and other places to make their spring purchases. The shipping trade is very dull.

LEEDS.—Only good seasonable articles ruled in demand, other articles being altogether neglected, and standard qualities alone commanding indifferent attention. Rates are without alteration, except for thin goods, which are said to be rather easier to buy. The clothiers who are manufacturing heavy goods of the better qualities are pretty well employed, especially the makers at Dewsbury, Batley, and Morley, but other manufacturers are restricting their productions within narrower limits.

HALIFAX.—Generally speaking, the worsted, the carpet, the woollen, and the cotton trades in this locality show no material alteration. Most of them are rather dull.

ROCHDALE.—We had very little change in our warehouses as to wool. The prices of last week for all sorts were firmly asked and given. Flannel—Merchants have begun to operate very sparingly, and to buy so as to keep stocks in their warehouses low during stock-taking.

LEICESTER.—The demand for hosiery usually in request at this period of the year continues steady, but by no means brisk. The trade generally is healthy. In the country districts of Loughborough and Hinckley there is a slight improvement. Yarns are unaltered in value, and spinners are pretty generally well employed. Wools continue firm, good qualities being high in price.

NOTTINGHAM.—The lace trade continues without change for the better, and this week there has not been much business doing in the warehouses. Plain goods are rather more in request, and a few orders are being received for stiff nets. There are a few buyers from the United States in the market, but they operate with great caution at present. The cotton fancy trade is dull, and, indeed, has been so for some time past. The silk lace trade is without alteration. The lock-out Mechlin hands, after a strike of nearly four months, resumed work on Monday. In hosiery there

still continues an improvement, and future prospects are of an encouraging nature; more machinery is being set to work, and the operatives are much better employed; still there are many who have yet only partial work.

GLASGOW.—The wool trade still remains quiet. Prices are firm, but unchanged, and buyers and sellers are both acting cautiously.

BELFAST.—In the export of linen a steady outgo continues from the chief warehouses, the demand for the American markets, as well as for several continental seats of sales being pretty good. There has been a better state of demand in the home trade, chiefly in low and medium lines of linen; but, up to the present, that portion of the business has not been equal to former seasons. The supplies of goods offered at the public places of sale in the North, taking a general review of all the towns in which linen webs are sold in open market, do not come up to the average. Flax spinners are pushing on the production of yarns with the usual enterprise, but the extreme rates for raw material press close on the margin of profits, and, in coarse numbers, that margin has been exceedingly narrow for some months past. The markets for raw material have been more liberally supplied, and sales went off on terms which must prove satisfactory to enterprising growers. In the lower ranges of fibre there is more firmness, owing to the lessened prospects of large supplies from Riga, and other parts of Russia. The value of prime lots of handscutched is the turn higher; in low and very inferior qualities the rates have been fluctuating; but these extremes can hardly be taken as true tests of general quotations. Handscutched has sold at 6s 6d to 8s 3d: and for a few extra quality samples, 8s 6d was had; milled went off at 7s 6d to 13s 6d per stone of 16½ lbs.

WOLVERHAMPTON.—The official list of prices of Staffordshire finished iron is as follows: Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*, and all other sorts in proportion. Welch bars, 5*l* 7s 6d to 5*l* 10s. The nominal price of rails in Wales is 5*l* 5s.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Oct. 30.—FLOUR.—The market for State and Western flour has been somewhat changeable during the past three days, and prices have exhibited considerable fluctuation. The demand has been moderate from the local and Eastern trade, while shippers have manifested little disposition to operate at the currrent rates, which have been somewhat above their views. The sales for the three days aggregate 58,000 bbls. The market for Southern flour has also been heavy, and though we do not quote a marked decline, prices tended in favour of the purchaser. The sales for the three days comprise 3,300 barrels at 5.75 dols to 6.75 dols for Baltimore.

EXPORT, from 1st to 23rd October.

	1860 barrels		1859 barrels
Wheat Flour	208,658		113,069

GRAIN.—The market for all kinds of wheat has been heavy, and the demand has been less active. During the past three days, the sales aggregate 545,000 bushels, including 24,000 Winter red Western at 1 dol 34c; 56,000 Milwaukee Club, 1 dol 25c to 1 dol 26c; 2,300 very choice white North Carolina, 1 dol 62½c; 59,000 Chicago Spring, 1 dol 19c to 1 dol 20c; 1,200 red State, 1 dol 30c; 3,400 white Michigan, 1 dol 42c to 1 dol 48c; 600 amber Michigan, 1 dol 36c; 200 red Southern, 1 dol 30c; 11,000 Racine Spring, 1 dol 20c; and 17,000 amber Wisconsin, 1 dol 26c, closing heavily. The demand for corn is tolerably active.

EXPORT, from 1st to 23rd October.

	1860 bushels		1859 bushels
Wheat	2,139,582		40,733
Corn	124,609		7,498

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Nearly the whole of the leading markets held this week have been very moderately supplied with wheat, in the general quality of which, however, we have observed a decided improvement. Selected samples of both red and white have been in moderate request, at full quotations; but low and damp qualities have changed hands slowly, at a decline in the quotations of fully 1s per quarter. At the outports, foreign wheats have commanded much less attention than of late, and previous currencies have been with difficulty supported. The barley trade, owing to increased supplies on offer, has been somewhat heavy, and prices have ruled a shade in favour of buyers. The malt trade, however, has continued firm, at full currencies. Good sound oats have moved off steadily—other kinds slowly, at about previous rates. Both beans and peas have sold brisky, at extreme rates. The demand for flour has fallen off, and inferior parcels have ruled somewhat cheaper.

Throughout the Continent, wheat has met a slow inquiry. In prices, however, very little change has taken place. The supplies on offer are seasonably good. For spring corn, the demand has been tolerably active, on former terms. The purchases on English account are large for the time of year. The Spanish markets continue active for flour, which article is being shipped in considerable quantities. In the United States, both wheat and flour have changed hands freely at full currencies. The quantities now on passage to England are very large.

The present state of the trade is in accordance with the view we have long since taken of it. In our opinion, the highest range in the value of both wheat and flour has been reached; but even though our warehouses are well filled with foreign produce, we see no reason to anticipate a serious decline in the quotations. Apparently, all spring corn will be very dear in price during the whole of the winter. The Scotch barleys do not malt so well as was at one time anticipated. They are selling, however, at very high rates, notwithstanding that large supplies may be looked forward to during the remainder of the year.

In Scotland, the demand for wheat has been somewhat restricted, and prices have shown a drooping tendeney. Barley and all other articles have moved off steadily at full currencies. The potato crop is turning out large, and of unusually fine quality; indeed scarcely any diseased potatoes are to be met with in any part of Scotland.

The Irish markets have been heavy for wheat at barely previous rates. Most other produce has changed hands to a fair extent, on former terms. The shipments to England have somewhat increased.

A very moderate supply of English wheat was on offer here to-day; nevertheless, all kinds moved off slowly at barely Monday's currencies. In foreign wheat, the show of which was large, very little was passing on former terms. Barley was a dull sale at barely previous rates, and the demand for all other kinds of produce was heavy.

Mr E. Rainford thus reports the state of the floating trade:—Since the 7th inst. 26 arrivals for orders are reported up to last night, consisting of 15 cargoes of wheat, 6 maize, 2 barley, and 3 miscellaneous, viz.:—Wheat, 4 from Odessa, 5 Taganrog, 1 Trieste, 3 Berdianski, 1 Marianople, 1 New York; maize, 3 Sulina, 1 Naples, 2 Constantinople; barley, 1 Galatz, 1 Malta; beans, 1 Saffi; locust beans, 2 Tavira. About 9 of the above were disposed of before arrival. There has been less doing this week in cargoes afloat than has occurred for a long time, and I have only the following transactions since this day week to the close of to-day's market to report, prices varying according to quality and condition:—Wheat, arrived, Berdianski at 58s 10½d; 3 Taganrog at 54s 9d, 53s 6d, 53s; 1 new Odessa at 57s 3d, all per 492 lbs; 1 Polish Odessa at 56s per imperial qr; 1 Banat 57s 6d; 1 Banat and Venetian 53s, both per 480 lbs. Maize, arrived, 1 Odessa, some warmth and discoloration, at 38s 6d; Foxanian, some warmth, 39s 6d, both per 492 lbs; 1 Ibraila, part discoloured, 37s 6d, and 1, slight warmth, 39s; Bulgarian, some discoloration, at 37s 6d, all per 480 lbs. Barley, on passage, Egyptian to London direct, at 28s 6d per qr B.L. quantity.

The London averages announced this week are:—

	qrs	s	d.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 14th day of November, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	26,997,655	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	12,522,655
		Silver Bullion	...
	26,997,655		26,997,655

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,490,273
Rest	3,191,718	Other Securities	20,310,515
Public Deposits, including Exchequer, Savings Banks, Commissioners of National Debt, and Dividend Accounts	5,804,022	Notes	6,338,385
Other Deposits	12,603,792	Gold and Silver Coin	792,156
Seven Day and other Bills	778,797		
	36,931,329		36,931,329

Dated the 15th November, 1860. W. MILLER, Deputy Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,438,067	Securities	29,722,788
Public Deposits	5,804,022	Coin and Bullion	13,314,811
Private Deposits	12,603,792		
	39,845,881		43,037,599

The balance of Assets above Liabilities being 3,121,718*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£388,937
AN INCREASE of Public Deposits of	835,850
A DECREASE of Other Deposits of	510,459
No change in the amount of Government Securities.	
AN INCREASE of Other Securities of	341,866
A DECREASE of Bullion of	582,274
AN INCREASE of Rest of	23,138
A DECREASE of Reserve of	35,474

The Bank returns still continue unfavourable, although not more so than had been anticipated. The decrease in the circulation and the decrease in the bullion are about equal, and as the reserve has only decreased 35,474*l*, the Bank has not become weaker. The increase in the "other" securities of 341,866*l* shows a continued demand for discount on the part of the public; and the decrease of 510,459*l* in other deposits shows the active demand for money that has existed. Altogether, however, the Bank returns are not such as to create any alarm, for these variations may all be traced to the bullion transactions of the Bank of France.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,407,008	£ 22,235,854	£ 21,552,123	£ 22,330,133	£ 21,438,067
Public deposits	8,240,884	5,483,881	6,821,973	6,425,066	5,804,022
Other deposits	9,385,599	13,969,165	12,561,558	14,642,617	12,603,792
Government securities	14,228,901	6,497,134	10,808,591	10,925,157	9,490,273

Bank rate of discount	2½ p. c.	10 p. c.	3 p. c.	2½ p. c.	6 p. c.
Price of Consols	97	89¾	96¼	96	93⅜
Average price of wheat	39s 11d	51s 8d	41s 10d	42s 10d	58s 9d
Exchange on Paris (shrt)	25 10 15	25 35 45	25 5 12½	25 7½ 12½	25 17½ 25
— Amsterdam ditto	11 15 15½	11 17 18	11 14 15	11 13½ 14	11 14½ 15
— Hamburg (3 months)	13 4½	13 12	13 6½ 7	13 5½ 5¾	13 7½ 7¾

In 1850, trade was extending as was evidenced by the weekly increase of the other securities at the Bank of England. A very uneasy feeling prevailed as to the relations between Austria and Prussia. Silver continued to be exported to the Continent in large quantities, but the bullion in the Bank showed an increase. Doubtless at this time great exchanges between gold and silver were being made under the idea that should the discoveries of gold continue the prices would approximate. Silver had risen this week to 61½d per oz.

In 1857, the Bank return was a very remarkable one, as it showed that the Act of 1844 had been infringed by an over-issue of two millions of notes, of which the amount left in the Bank's coffers was 1,552,686*l*. Two millions of Government securities had been transferred from the Banking to the Issue Department. The Bank had also sold large amounts of Government securities, but the increase in the private securities was still rapid. The failures in the Swedish trade had commenced, and the Wolverhampton and Staffordshire Bank had stopped payment. The exchanges, however, were rising rapidly, and there were other indications of a coming turn for the better in the money market.

In 1858, a very confident feeling prevailed in financial circles in France, and the 3 per Cent. Rentes had risen to 75.20. At home the payments were in progress on the Second India Debenture Loan.

In 1859, the East India Railway having contracted a Debenture Loan of 1,600,000*l*, on which 5 per cent. had been paid, preparations were being made to pay the balance, the whole of which fell due on the 21st.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,934,968*l*; in 1857, a deficiency of 16,340,105*l*; in 1858, a deficiency of 2,149,475*l*; and in 1859, a deficiency of 4,228,168*l*. In 1860, the deficiency is 7,706,283*l*.

DISCOUNT AND MONEY MARKET.—This has been an eventful week in the money market, which has been subjected to great alterations, all however in the direction of a higher rate of discount. It the course of Monday it became known that the Bank of France had that morning raised the rate of discount from 3½ to 4½ per cent. This announcement was followed by large withdrawals of bullion from the Bank of England, and on Tuesday afternoon, after the ordinary business of the day had terminated, the Bank of England issued the following notice:—

The minimum rate of discount for bills not having more than 95 days to run is raised to 5 per cent.

(Signed) M. MARSHALL, Chief Cashier.

Bank of England, Nov. 13, 1860."

During Wednesday it transpired that the Bank of France had given orders to its agents in London to transmit 1,000,000*l* of gold, of which 635,000*l* was taken from the Bank of England in two days, making a total of 713,000*l* which the Bank had lost since the date of the last return.

The consequence was, that at the meeting of the Directors, on Thursday, the Bank rate of discount was again raised from 5 to 6 per cent. The movements on the part of the Bank of England were followed by the joint stock banks and discount houses making a corresponding advance in the rates they allowed on deposits; but it is worthy of remark that on the Bank of England raising the rate to 6 per cent., the joint stock banks, instead of allowing, as is customary, 1 per cent. below the Bank minimum on deposits, determined to allow only 4½. The only deviations from this decision are the London and Westminster in respect to deposits under 500*l*, on which they allow 3½ per cent., and the Commercial, who consider themselves bound to allow 5 per cent. on the sums previously lodged with them, but will allow only the same rate as the other banks on any new deposits. The discount houses allow 4½ per cent. for money on call, and 5 per cent. on 7 days' notice.

The allowing only 4½ per cent. on call is a very wise decision on the part of the joint stock banks and the discount houses; for in times like the present, when money is subjected to such severe fluctuations, they might have to submit to very heavy losses by taking too much money at call. It is especially incumbent on the discount houses to act with the greatest caution, and to place themselves beyond the possibility of being inconvenienced by any sudden demands being made on them, in consequence of the resolution of the Bank of England not to rediscount their paper. A margin of 1½ per cent. which they have now taken is not too much, and when we consider that the rate allowed is 4½ per cent., it is quite as much as any one can expect to obtain for money which can be demanded at a moment's notice.

The raising the rate of discount by the Bank of England has caused a great demand for discount both at the Bank and at Lombard street. Fortunately there appears to be a supply of money equal to the demand, for although the latter has been most active, the supply seems equally so, and it is evident that the raising of the rate of discount has been in consequence of the premium given for gold on the part of the Bank of France, for it is now no longer concealed that the real purchaser in the market for some time past has been, as we all along suspected, the Bank of France. The rate of discount this week has varied from 4¼ to 7¼ per

cent., and to-day a very heavy demand has taken place at the Bank, and in Lombard street particularly, and *as much as 6½ to 7 per cent.* has been charged by the discount houses and willingly paid by the public on first-class paper having less than two months to run.

According to letters received from Paris to-day, the Directors of the Bank of France met yesterday, and it was determined not to raise the rate of discount higher than the present rate, viz., 4½ per cent., for it has been found that the raising the rate in Paris has had the effect of alarming the public, and causing large withdrawals of gold from the Bank of France; and the advance of the rate of discount here to 6 per cent. has had such an effect on the exchanges, that of the two it would answer as an exchange operation to send gold from Paris to London, rather than from London to Paris. Since the raising the rate of interest to 6 per cent. no gold has left the Bank, and it remains to be seen what measures the Bank of France will take, and that we presume will entirely depend upon the withdrawals of the French public.

In the opinion of men of great experience the demand for discount will subside, and money will be lower in a few days. Much, however, will depend on the requirements of the Bank of France. Two vessels from Australia have been telegraphed this afternoon, and the gold immediately bought up for shipment to France. We know this is the case as regards the Sussex, with 248,644*l* on board. This shows that the wants of the Bank of France still continue.

The rate of money in the Stock Exchange on Government securities has risen from 2½ per cent., which it was in the early part of the week, to 4 per cent., and the joint stock banks have been giving on stock to employ in discount at a higher rate. The following are the rates of discount, so far as they are known :—

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	4½	4
Hamburg	...	2½
Vienna	5½	5½
St Petersburg	6	not known.

It is rumoured this afternoon that the Bank of Brussels has raised the rate to 5 per cent.

The Valparaso arrived at Panama 21st Oct., from South America, with 51,161*l* specie for England. The Sonora, from California, arrived at Panama 14th Oct., with 160,000 dols.

English Funds.—The fluctuations in the English funds have been from 93½ to 93, but it is evident that the jobbers have oversold themselves in Consols, for the market has been remarkably firm throughout the week. Notwithstanding the rise in the rate of interest, Consols close this afternoon 93⅛ to ¼ for money, and 93¼ ⅜ for the December account; Exchequer Bills, 6s to 3s discount; New 3 per Cents. and Reduced, 91⅜ ½. We must again call attention to the great disparity in price between New 3 per Cents. and Reduced, compared to Consols.

Foreign Funds.—The transactions in Foreign funds offer nothing worthy of comment. Turkish Bonds have improved to 57½ to 8, and the original loan to 72 to ½. French 3 per Cents. close this afternoon 69.95, which is an improvement of ¼ per cent.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

Consols.

Railways.—The market for railways has been very depressed. We have no doubt the raising the rate of discount has caused loans to be called in and brought stock to market. The settlement, however, which took place yesterday did not show any great abundance of stock, the rates of continuation being moderate.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day :—

Railways.	Closing prices last Friday.	Closing prices this day.

Bullion.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes :—

Gold.—The demand for gold, to which we have for some weeks past alluded in our circulars, is still most active, so much so, that although the 282,500*l*, per Swiftsure, has been deliverable this week, the large sum of 670,000*l* has been taken from the Bank. The Ethiope has brought 15,000*l* from the West Coast of Africa, and the City of Manchester 30,000*l* from New York; and these amounts have also been sent away. The demand for export is still active, and, in default of the arrival of some gold from Australia, it is probable that further amounts will be taken from the Bank. The large withdrawals from the Bank have been the cause of a rise in the rate of discount of 1½ per cent., which now stands at 6 per cent. The following vessels are now on the way from Australia :—The Water Nymph, with 322,000*l*; the Sussex, with 248,640*l*; the Anglesea, with 230,400*l*; and the Suffolk, with 293,000*l*. The two first ships are now due, and their arrival may be reported at any moment. In addition to the above, the Great Britain was advertised to leave about the 18th October, and a large amount of gold was already engaged to come by her. The Magdalena has taken 10,651*l* to the Brazils, and the Indus 60,000*l* to Alexandria and Bombay.

Silver.—The bar silver ex Seine has been sold at 61⅛d per ounce standard, but the demand has not been very active; only 79,500*l* was sent to Bombay, and 6,100*l* to Calcutta by the steamer of the 12th inst. We quote the price as 61⅛d per ounce standard, with a rather quiet market. The Sultan has brought 3,142*l* from Lisbon, and the La Plata has just been telegraphed with about 450,000*l* in specie, but it is not yet known of what description. The Magdalena has taken 14,010*l* to the Brazils.

Mexican dollars have been inactive, the price mentioned by us last week, 62¼d per ounce, we still quote, with but little demand.

Exchange on India is rather weaker. Bills on Bombay and Calcutta by Banks at 60 days' sight are 1s 11⅛d to 2s 0⅛d. Documented bills, 1s 11⅛d to 1s 11½d. Madras about 2s for 60 days' sight Bank drafts.

India Government Loan Notes are very quiet, with sellers at 101 for 5½ per Cents., and 95 for 5 per Cents. The rise to 6 per cent. by the Bank of England this day has not materially affected prices, but sellers are naturally more disposed to meet fair offers.

Failures.—The adjourned meeting of the creditors of Messrs Evans Brothers, builders, has been held. At the previous meeting the liabilities were stated at 41,424*l*, and the assets at 24,911*l*. The former have since been increased to the extent of about 5,000*l*, whilst the total of the latter is estimated at only 13,496*l*, the stock on the previous occasion having been greatly over-valued. It was mentioned

that the different contracts of the firm have been carried on since the meeting on the 1st inst. at an expense of only 200*l*, which had been advanced by Mr Lewis, Messrs Evans' legal representative. The principal of these contracts are the Merthyr Waterworks, the Swansea Union, and the Tavistock Hotel, and any delay in the carrying of them out would probably lead to their forfeiture, and, as a necessary consequence, to a great reduction in the assets. A resolution was finally adopted in favour of the liquidation of the estate under the private arrangement clauses, and it is understood that meanwhile money will be provided to carry on the contracts. Nevertheless this resolution may have no effect, in face of the opposition shown by the committee of the creditors of Davies and Co.

The Bankruptcy Court was crowded with creditors of Messrs Robert Davies and Co., the bankers, of Shoreditch, on the day appointed for proof of debts and choice of assignees. The undermentioned gentlemen, being those nominated by the committee of creditors, and proposed by Mr Linklater, were appointed trade assignees, viz. :—Messrs Jeremiah Long, William Estwick, Jeremiah Death, and Francis Pearle. Debts to the amount of 88,000*l* were proved.

Trade assignees have been appointed in the case of Mr R. E. Ridley, merchant, of Great St Helen's, whose liabilities are 26,000*l*, and assets 4,000*l*. A first-class certificate was awarded to Mr R. Foot, silk manufacturer, of Spitalfields, who pays 14s in the pound.

The stoppage of Mr Henry Holmaear, sugar refiner, of Finch street, Whitechapel, has been announced. It is said that he will pay about 12s 6d in the pound.

A conference has been held between the Manchester Chamber of Commerce and Mr John Crossley, of Halifax, and Mr S. Morley, of London, on the subject of Bankruptcy and Insolvency Laws amendment. Resolutions were passed expressing satisfaction with the promised reintroduction of Sir Richard Bethell's Bill, and a committee was appointed to co-operate with other associations in promoting the reforms demanded by the commercial interests.

Miscellaneous.—The Government of Victoria has acceded to the representations made to it on behalf of the Geelong and Melbourne Railway Company. The committee of the six associated Australian banks announce that on the 1st December, by authority of the Colonial Government, they will be prepared to pay in cash the capital of the railway, with all arrears of interest. The Company's Debentures, due the 1st January, will also be paid off, together with all the overdue coupons.

The report of the Directors of the Madras Railway Company describes the progress of the operations which have been vigorously pursued on the several lines now under construction. The progress of the traffic on the open portion of the south-west section is likewise satisfactory. The Directors congratulate the shareholders on the very near approach to completion of this important line, which comprises upwards of 400 miles, extending from the one coast of the Peninsula to the other. The sum received up to this time on account of the Company's Five per Cent. Debenture Loan is 793,700*l*, the amount authorised being 1,000,000*l*.

Messrs Robert Benson and Co. have favoured us with the following interesting letter from their agents at New York, which gives a very succinct account of the state of the money market there, which is very interesting at the present juncture:—

Office of the Illinois Central Railroad Company,
New York, October 26, 1860.

Gentlemen.—I wrote to you on the 23d. The Bear party continued their efforts to create a panic with great vigour and success, and the average decline on the list is 15 per cent. As yet holders of stock are not alarmed, and regard this as a bold manœuvre, which may possibly be carried on for a week or two longer. Many are waiting, as usual, for the lowest point of the speculation to take hold of shares.

Money is abundant at 5½ to 6 per cent. Mercantile paper, single names, at four months, sells at 6½ to 7 per cent. The banks are accumulating specie and deposits, with a low average of loans. Exchange on London dull and declining.

The accumulation of Eastern-bound freight at Chicago is so great that the Michigan Central and Southern roads have declined to make engagements ahead. We are daily hauling empty cars from Cairo, and still have been obliged to refuse this week 12,000 bales of compressed cotton, offered at Memphis for Portland, in consequence of the inability of the roads east of Chicago to take it without great delay.

Our traffic the third week exceeded any week of previous years, being 82,628 dols 20c; against, in 1859, 54,729 dols 6c; gain, 27,899 dols 14c.

In the land office the business is very large, 121,600 dols cash collected to this date, and 237,200 dols of sales. This presents a strong contrast to the business of the whole month of October last year, 14,837 dols of sales and 56,674 dols 25c of collections.—Yours respectfully, (Signed)

Thos. E. Walker, Chairman ex-Committee.

Messrs Robert Benson and Co., London.

The Committee of Mexican Bondholders have received a letter from Mr Whitehead, dated Mexico, the 15th ult., and another from Messrs Vigo Brothers, of Vera Cruz, dated the 20th ult. The latter reports that although it had been the intention of the Vera Cruz authorities to resume the payment of the assignment to the British bondholders and the convention creditors on all cargoes arriving after the 13th September last, yet their necessities had compelled them to prolong the suspension till the 21st proximo, of which they had officially informed the British Consul at this port. About Guadalajara nothing was known in the capital on the 15th ult., beyond that on the 6th ult. it had not yet been taken, although the subject absorbed the whole public attention, because on it depended in a great measure the existence of one or the other of the two parties which divide the country. The Vera Cruz letter of the 20th ult. does not, however, allude to it. Mr Glennie, having failed in his endeavours to recover the whole of the conducta seized by General Degollado, succeeded, however, in getting back the dollars belonging to British subjects, amounting, it seems, to only 400,000 dollars. In pursuance of orders from home, Mr Mathew intended to leave the capital on the 25th October, and go to Jalapa, there to await the arrival of his successor. Mr Whitehead was conferring with him as to what measures could be devised for the safety of the funds of the bondholders after the departure of the British Legation.

A prospectus has been issued of the Great Kanawha Company for the purchase and development of a tract of 85,000 acres of land, or about 133 square miles, on the River Kanawha, in Virginia. The chief value of the estate consists of coal deposits which abound throughout this region, and the neglect of which has long been a matter of surprise to all persons acquainted with them. The cost of the property will be 127,500*l*, and a large portion of that amount will be taken in shares of the Company. The true plan, however, in enterprises of this kind is to insist that the whole remuneration shall be taken in shares, and consequently be made contingent on success; and, moreover, that those shares should remain in the hands of the Company, and not handed over until the shareholders, who *bona fide* subscribe their money and run the risk, should be in receipt of the dividends held out to them in the prospectus; and we should hope, from the respectability of the board and the brokers of the Company, that these suggestions will be carried out in the present instance.

The charter of incorporation of the London and South African Bank having been granted, and all the shares subscribed for, the Directors have made a further call of 2*l* per share, payable on the 15th December, on which day the share certificates will be issued.

The attention of the holders of Brazilian railway shares has been already directed to the means of availing themselves of the option of conversion into the local Brazilian Six per Cent. Stock. We hear of 3,000 shares in the Pernambuco Railway Company, originally withdrawn from the register in Brazil, which have just been sent back thither with a view to conversion into the internal debt.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The quantity of English wheat on offer at Mark lane, this morning, was very limited, but in somewhat improved condition. Both red and white samples met a dull inquiry, and, to have forced sales, lower rates must have been submitted to. There was a dull sale for foreign wheat; but no quotable change took place in prices. Barley was a slow inquiry, and the business doing in all other kinds of produce, including flour, was much restricted, at barely Monday's currency. The imports from abroad, this week, have been tolerably good—viz., 16,620 quarters of wheat; 2,160 barley; 16,490 oats; and 2,190 sacks of flour.

At Liverpool, to-day, wheat gave way 2d per cental, and flour 6d per sack and barrel, at which very little business was transacted.

Throughout the Continent, as well as in the United States, there has been much less activity in the demand for grain on English account, and, in some instances, prices have had a drooping tendency.

The advances in the Bank rate of discount, during the week have had a very depressing effect upon the Liverpool cotton market, and the transactions have been to a limited extent only. The total sales have amounted to 44,000 bales, and include 29,000 bales to spinners, 12,000 on speculation, and 3,000 bales for export. The quotations for the better descriptions of American are 1/4d per lb reduced, and also for East India; the lower qualities of American are 3/4d to 1/4d per lb reduced from last week's highest

point. If the money market should not soon become easier, still lower prices will be inevitable next week, for, during the excitement, many small parties speculated in the article, and will now no longer be able to hold, and forced sales will be very prevalent. The market to-day closes quiet; sales only 5,000 bales; prices without change.

"The recent frost at the South proves less serious than was at first expected," write Messrs Neill Brothers, of New York. "In few places do we hear of any material damage, as the ground was generally very dry, and in the more Southern districts the plant has been benefited by this touch of cold weather. Our advices report a warmer temperature, with fine picking weather up to telegraph dates. The upland crops are yielding lightly in many places, and picking is about finished on some of the plantations. On others, the yield, though short, will result better than expected a few weeks back, owing to the fine weather for maturing and saving the crop. The bottom lands are also doing well, and will make full crops with a favourable picking season. The expectation of a large crop has has long since been abandoned; but as the yield is still dependent on future weather, a corect estimate cannot yet be formed."

Exports of cotton from Bombay from 1st January to October 8.

	1860. bales		1859. bales
To Europe	372,118	.....	483,385¼
To China, &c.	190,457½	.....	127,387½
Total	562,575¼	.....	610,773
Showing a decrease of	48,197½ bales.		

More business has been transacted in cotton of late at Alexandria. Messrs Briggs and Co., writing on the 3rd ult., observe:—

An active business has continued to be transacted in our cotton market. The daily arrivals from the interior are rapidly bought up at advancing prices for all qualities of the staple, but especially so for the finer grades. These last come forward in small proportions, and are subjected to eager competition on the part of buyers. The following are the sales since the 25th ultimo, with prices quoted per lb f.o.b.:—1,170 bales old cotton, 5d to 7.95d; 5,100 ditto fair to good, 7.90d to 8.63d; 120 ditto good to fine, 8.70d to 9.60; total, 6,390 bales. Freights, by steamers to Liverpool, ¾d to ⅞d and 5 per cent. per lb; by sailing vessel, ½d to 9-16ths of a penny per lb in full.

The public sales of tea, held this week, have gone off heavily, and the quotations have ruled in favour of buyers. In the private market, very little is passing, on former terms.

The following commercial report is dated Hong Kong, Sept. 28:—

Tea.—The unfavourable accounts of the home market have had a depressing influence, and great dulness has prevailed during the past fortnight. The selection on offer has been very limited, owing to the transit being still interfered with. The last accounts from Lockcheong are more favourable, and some few chops have arrived, so that we may shortly expect a resumption of business. Shanghai advices are to the 21st inst. Silk—4,000 bales have been settled, making total settlements for the season 26,000 bales. There were none of Nos. 1, 2, and 3 Tsatlees on the market, and rates of inferior had declined about 10 taels. Good Taysaams are 10 taels, and inferior 15 taels lower. Tea—Transactions only very trifling. A few chops of new crop Hehow and Ningchow had arrived in Ningpo, but they are principally contracts. Our export of tea for this season, from 1st July to 27th Sept., 1860, is—from Canton, 12,495,200 lbs; Foochow, 11,847,800; Shanghai, 1,067,100, giving total for the season 1860-61, as far as yet ascertained, 25,410,100 lbs, against 15,000,800 at the same date last year, showing an increase of 12,410,900 lbs. The silk export has been 21,585 bales, against 16,464 last season, the increase being 5,121 bales.

The advance in the value of money in the discount market has produced some heaviness in the demand for all kinds of sugar. Importers, however, have not pressed sales, so that very little change has taken place in the quotations.

Comparative Statement of Shipments of Sugar of each Crop from the Mauritius, from 1st August to the 30th September.

Further slightly reduced rates have been submitted to in the coffee sales. Generally speaking, the market is very flat.

Messrs Volkart Brothers, of Colombo, write as follows in reference to the coffee trade. The communication is dated Oct. 15:—

The disposal of the present season's crop to date is as follows:—

Plantation Coffee.

To Great Britain ..... cwts	9,333	against last year, cwts		18,525
Foreign Ports	—	—	—	1,262
Australia and India	—	—	—	—
	9,333			19,787

Native Coffee.

To Great Britain ..... cwts	2,610	against last year, cwts		9,202
Foreign Ports	—	—	—	822
Australia and India	—	—	—	—
	2,610			10,024

In plantation coffee there have been transactions at our previous figures for well grown samples to the extent of twenty thousand bushels, but we hear of nothing doing in low grown coffees. The crops come on irregularly, and full work is by no means general. The weather in the interior is favourable, and labour sufficient for present wants. The new crop of native coffee arrives more freely, but very uneven in quality, and mostly inferior. On the arrival of the mail news via Galle, high prices were paid, but the article has since been purchased on easier terms. The shipments for the season 1859-60 being concluded, give 472,618 cwts of plantation, and 160,241 cwts of native, against 386,891 cwts and 197,661 cwts for the previous season. Plantation coffee, low, nominal; ditto, mountain, 11s 3d to 11s 6d per bhl: native coffee, unpicked, 42s 6d to 43s; ditto, picked and dried, 45s 6d to 46s per cwt. Cinnamon, plantation, 9½ to 10d; ditto, inferior, 6d to 7½d per lb.

A full average business has been passing in all kinds of rice at fully previous rates. The quantity on offer is by no means extensive.

According to a statement forwarded by Mohr Brothers and Co., the comparative shipments of rice from Rangoon to Europe, Straits and China, and the coast, for 1858, 1859, and 1860, were as follows:—

	Europe. tons.		Straits and China. tons.		Coast. tons.
1858	44,629	.....	59,641	.....	4,409
1859	22,009	.....	15,543	.....	6,615
1860	15,714	.....	16,739	.....	801

Totals from 1st of June to 30th of September, 1858, 108,679 tons; 1859, 43,167 tons; 1860, 33,254 tons.

The fruit market is firm, and rather more money has been paid for raisins. Other fruit has commanded extreme rates.

The last series of colonial wool sales for the present year opened on Thursday. As compared with the close of last sales, prices may be quoted ½d to 1d per lb higher for Sydney, Port Philip, and New Zealand, and without change for Cape of Good Hope wool; the inferior descriptions of the latter are, if anything, rather easier. The home trade was well represented, but the Continent supplied fewer buyers than last sales. The tone of the biddings was satisfactory, particularly in the face of the sudden advance in the Bank rate to 6 per cent. The quantities arrived to date are as follows, viz.:—From Sydney, 4,758 bales; Port Philip, 4,660; Van Diemen's Land, 2,028; Adelaide, 1,162; New Zealand, 4,152; Swan River, 85; Cape of Good Hope, 20,785; total, 37,630.

"Since our last," writes M. Arles Dufour, of Lyons, on the 10th inst., "more activity has prevailed in the continental silk trade. Silk goods are scarce, and orders for the European and American spring trade secure work to the manufacturing districts for some months to come. This favourable position has prevented any weakness on the present high rates, at which, however, holders generally seem disposed to realise."

Deliveries of Silk through the Lyons Condition House.

We have received the annexed report of the indigo trade at Calcutta from Messrs Moran and Co. It is dated the 8th ult.:—

The accounts of the Indigo markets in Europe continue unsatisfactory, a fact the more to be regretted, as many planters of Lower Bengal will require much higher prices than they are likely to get to save them from heavy loss, if not from utter ruin, this year. The unsettled state of the Continent tends no doubt to shake confidence in the indigo trade, but on the other hand the greatly reduced production in Bengal of late years, and the prospect of a still greater falling off, since Government has turned so completely against planters, should have their weight and influence upon the prices ruling. We are now in the month of October, but it is impossible to get the lands sown in the disturbed districts. Even the Neezabad lands are for the present lost to the planters, the ryots having forcibly sown them. In Kishnaghur, Jessore, and Rajshye matters are as bad as they can well be. The second cuttings in Tirhoot have been giving very handsome produce, and we must therefore increase our estimate of the outturn of Tirhoot and Chuprah to 34,000 mds. The accounts from the Benares districts vary to some extent, and some factories do tolerably well, whilst others fall greatly short of the very poor results they anticipated a month ago. From the Doab we have no change to notice. Our estimate to-day is as follows, viz.:—Bengal, 51,000; Tirhoot and Chuprah, 34,000; Benares, 13,000; Doab, 12,000. —total, 1,10,000. Exports from the 1st November, 1859, to the evening of the 3d current:—To Great Britain, 18,930 chests; Havre and Bordeaux, 5,186; Foreign Europe, 64; America, 1,497; Gulf, &c., 1,763; sundry ports, 11—total, 27,451 chests.

There has been a good consumptive demand for most kinds of rum, at full quotations. In brandy and grain spirits, however, the transactions have been on a very moderate scale.

No change of importance has taken place in the value of metals or oils; but saltpetre has fallen 6d to 1s per cwt.

The tallow market has continued steady to-day. P.Y.C., on the spot, has sold at 61s 3d; December, 61s 6d; January to March, 62s; April to June, 59s; October to December, 1861, 58s 3d per cwt. Town tallow, 60s net cash.

"The general features of the money market," says a report from New York, "are unaltered. The demand, if anything, is a little more active than it was earlier in the week, but this is freely met at the quotations below. We quote:—

	Per cent. per annum.	
Loans on call, stock securities	6	to 7
Do. other good securities	7	...
Prime endorsed bills, 60 to 90 days	6½	7
Do. 4 to 6 months	6½	7½
First class single signatures	8	8½
Other good bills	9	10
Names less known	12	20

In general merchandise the business may be called moderate, without remarkable change in the prices of any article. The arrivals from sea within the past few days have been quite numerous, and include many vessels from foreign ports."

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The market has been very unsettled in consequence of the advance in the rate of discount, and most descriptions are difficult to sell, even at a slight decline. Importers, however, have shown firmness, and general quotations do not exhibit any material change. West India is steady, with rather limited transactions. By auction, 206 casks Barbadoes went at the full valuations: low to very good, 40s to 46s per cwt. The deliveries continue steady.

Bengal.—107 bags Gurpatta date realised 42s 6d to 43s for middling quality.

Other East India.—1,605 bags Penang sold at 38s to 42s 6d for brown and yellow. 1,893 bags native Madras were chiefly bought in above the value. 2,071 baskets Java partly sold at 43s for low grey.

China.—Of 7,491 bags by auction, 1,500 bags sold at 46s 6d to 47s per cwt for good white.

Foreign.—4,000 boxes Havana and 191 casks Cuba were bought in at full prices. 253 casks Porto Rico sold at full rates: brown to fine yellow, 40s to 48s 6d per cwt. 1,997 bags Siam, &c., were chiefly withdrawn.

Refined is dull, and occasionally 6d per cwt lower.

MOLASSES.—100 puns Trinidad have sold at 20s 6d per cwt.

COFFEE.—The public sales of plantation Ceylon went off heavily, 670 casks 750 barrels and bags partly finding buyers at 6d to 1s decline. 700 cases East India were bought in. 262 bags Singapore sold at 56s 6d to 60s. 68 bales 82 half-bales Mocha at full rates, 117s to 123s; unclean 105s to 108s per cwt.

COCOA.—618 bags Trinidad part sold at easier rates: grey to good red, 63s to 75s per cwt.

RUM.—The market is quiet but firm, and quotations unchanged.

TEA.—Business this week has been chiefly confined to the public sales. Up to yesterday, 35,262 packages had passed, 12,300 finding buyers. Scented capers went much lower. Other kinds unaltered.

RICE.—About 45,000 bags have sold on the spot at full rates. Three flostlog cargoes of Arracan at 12s to 12s 3d for Necrancie; one of Rangoon at 12s. By auction, 14,623 bags old Moulmein were taken in at 11s per cwt.

SAGO.—A large business has been done at 17s to 19s 6d. By auction, 300 boxes medium Borneo sold at 18s 6d. 1,099 bags sago flour partly sold at 18s to 18s 6d per cwt.

SPICES.—At the sales this week, nutmegs went 1d to 2d cheaper. Mace about the same as before. 1,233 bags pimento, 3d to 3½d per lb. 212 cases cassia lignea sold rather lower: low to fine, 87s to 96s per cwt. A large business has been done in Zanzibar cloves privately at 3¾d to 4¼d per lb. 50 cases Cochin ginger sold at 44s to 61s for wormy to middling; and 110 barrels Jamaica, at 63s to 70s per cwt.

SALTPETRE.—A few parcels Bengal have sold this week at easier rates refraction 3¼ to 2¼, 43s to 43s 3d per cwt. By auction, 1,260 bags part sold: refraction 11 to 11¼, 39s 6d to 40s; and 166 bags Madras, refraction 34½, 39s to 39s 6d per cwt.

COCHINEAL.—250 bags went off at rather lower rates for Teneriffe silver, viz, 2s 10d to 3s 2d per lb; blacks at 3s 5d to 4s 4d per lb were dearer for the better kinds.

SAFFLOWER.—165 bales Bengal sold steadily, at 4*l* 10s to 7*l* per cwt.

TURMERIC is more readily saleable, at previous rates, viz., 13s to 14s per cwt.

INDIA RUBBER has sold at lower rates for Para: good, at 2s 6d per lb. East India is quiet, at 1s 11d to 2s per lb.

METALS.—Nearly all descriptions have been dull, owing to the unsettled state of the money market. Scotch pig iron has declined to 52s per ton. A steady business is reported in spelter, at 20*l* to 20*l* 5s, and 20*l* 5s to 20*l* 7s 6d per ton to arrive. Foreign tin has been quiet, and prices are nominal.

JUTE.—The sales on Wednesday went off flatly. Of 7,900 bales brought forward, about 2,200 bales found buyers, at rather lower rates.

HEMP attracts less attention. 1,217 bales Manilla, by auction, about one-third part sold at 24*l* 15s to 25*l* per ton for good roping quality.

TURPENTINE.—Rough is worth 11s. Spirits sell slowly; American quoted 33s 6d to 33s 9d per cwt.

LINSEED.—The market shows unabated firmness. Bombay commands 63s; Calcutta 60s to 60s 6d; good Petersburg, 58s. Large sales are reported for arrival: Black Sea, 58s to 58s 6d; Calcutta, 58s 9d to 59s per quarter.

OIL.—Olive remains neglected. Fish oils are firmer, excepting sperm, which can be obtained at 102*l* to 103*l*; pale seal is now held for 40*l*; cod, 38*l* per ton. Palm has been dull at 47s 6d to 48s. Cocoa-nut is higher: Cochin, 55s to 55s 6d; Ceylon, 53s 6d to 54s. The market for linseed has been inactive, with sellers at 29s 9d to 30s, and 30s 6d for delivery in January to March. Rape fully supports the improvement last alluded to, and the latest sales show a rise of 6d to 1s: foreign refined, 46s; brown, 43s per cwt.

TALLOW.—The market has been firmer, and the Russian speculators supporting prices. At one period, yesterday, foreign commanded 1s advance, viz., 61s to 61s 6d, on the spot and for the year; 62s to 62s 6d for spring delivery. This morning, the above quotations cannot be obtained.

PARTICULARS OF TALLOW.—Monday, November 12.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The sales were small to-day, comprising 1,127 bags Mauritius and 2,213 bags Bengal: the former went off at easier rates, but the latter was principally bought in, there being no fair offers made. Few transactions have taken place by private contract. The week's business has amounted to 761 casks. A cargo of Havana, No. 9 to 9½, brought 28s per cwt for the United Kingdom.

COFFEE.—87 casks 71 barrels 165 bags plantation went off flatly at about previous rates. 838 bags native chiefly sold at 63s to 63s 6d for good. 1,513 bags Rio partly found buyers: good to fine ordinary, 60s to 63s 6d.

TEA.—The sales were brought to a conclusion to-day. 17,744 packages passed, of which 5,050 sold. Red leaf congou went cheaper for some offered "without reserve."

SPICES.—600 boxes cassia lignea were bought in at 91s to 93s per cwt for third and second pile. 87 bags Singapore white pepper sold at 6¾d to 6½d.

RICE.—A cargo of Necrancie Arracan sold at 12s per cwt to-day.

COCHINEAL.—400 bags offered to-day went as follows: Honduras silver, 2s 6d to 3s 6d; black, 3s 8d to 4s 4d; Teneriffe as previously quoted; Mexican black, 3s 2d to 3s 3d per lb.

CUTCH partly sold at 25s to 25s 6d per cwt.

SAFFLOWER.—89 bales Bengal partly sold at 6*l* to 9*l* 5s per cwt.

OIL.—2,500 tubs Japan were part sold at 26*l* to 30*l* per tun. Cocoa-nut went at 54s 6d to 55s for Cochin, and at 53s 3d to 54s 3d for Ceylon. 155 casks palm brought 47s 3d to 47s 9d per cwt.

TALLOW.—Y.C., 61s to 61s 3d per cwt. Town unaltered. By auction, 124 pipes South American went at 58s to 60s per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar opened heavily this week; what few sales have been made are at a reduction of 6d to 1s, and closes with a downward tendency. Several sales of crushed sugar have been made at Havre and Marseilles for exportation.

GREEN FRUIT.—A fair business is doing, but supplies are wanted which are kept out by contrary winds. Some parcels Almeria grapes, sold by Keeling and Hunt at public sale, sold at prices in character with condition and quality. A small parcel Lisbon oranges sold well. A large arrival of Oporto per steamer to hand. Black Spanish selling freely at 37s per barrel; Barcelona, 35s per bag. Fayal oranges daily expected.

DRY FRUIT.—A very healthy trade has been done in currants, especially for fine sorts of new, which show an advance. Common new also are selling at improved rates. Old are firm at 24s. Valencias are held for 43s, and 50s has been paid for a parcel of selected. Fine Elemes off stalk have been done at 46s; common small stalky sorts, 37s. Figs show improved rates for fine, but a decline on common qualities.

SEEDS.—The prices of seed keep well supported, with a moderate demand.

FLAX.—Market very firm.

HEMP.—Very little business has been done this week. In Russian the

rise in the Bank rate of discount has tended to quiet the market in a great measure.

COTTON.—Sales of cotton wool, from Friday, 9th Nov., to Thursday, 15th, inclusive :—1,250 bales Surat at 3⅞d to 4⅛d for very ordinary seedy to fair Compta; 5⅛d for good new sawginned; Madras at 4½d to 5⅛d for middling to good fair Tinnivelly; 5⅜d for very good new. The market opened steadily, and a moderate business was transacted on Friday and Saturday, at previous rates. Since that period there has scarcely been anything doing; the falling off in the demand at Liverpool, and the raising of the rate of discount by the Bank of England on Tuesday afternoon from 4½ to 5 per cent. and to 6 per cent. yesterday, having almost entirely checked the demand. However, as there is no immediate disposition to press sales, quotations 'remain' nominally the same as last week. 105 bales West India cotton are advertised for public sale on Thursday, the 22nd inst.

SILK.—The silk market is quiet, and lower prices are expected, on account of the advance in the price of money, combined with expected imports.

TOBACCO.—The market has presented no change in character: prices have continued very firm and steady. The disinclination of importers to make sales, unless at full quotations, has induced the trade to purchase to a limited extent, and business has been chiefly confined to selections for immediate consumption.

LEATHER AND HIDES.—There is not any alteration this week in the leather market. The demand continues to be of a limited, although general character. The supplies are large, excepting of prime dressing hides, about 35 lbs, which are scarce, and much wanted. Prices generally are much as last week, but light English butts still show a downward tendency. Not any public sale has been held this week of foreign raw goods, but by private contract there have been sold 4,335 River Plate hides—best heavy Buenos Ayres, at 7⅜d; ditto Uruguay, at 7¼d; light, at 6¼d to 6½d; Monte Video, at 7d; 1,809 Buenos Ayres horse hides, 28 lbs, at 9s 6d; 1,100 Rio Grande ditto, 29 lbs, at 9s; and 2,991 Australian hides—heavy, at 5⅜d; light, at 4¼d; secunds, 3½d to 3⅝d.

METALS.—There has been a steady continuance of limited business this week, quite unaffected so far by the excited condition of the money market. Copper is unchanged in prices of English, but ores and some descriptions of foreign copper find buyers at advanced rates. Iron is wholly unchanged in position and prospects. Tin keeps steady. Spelter has advanced fully 5s per ton. Lead has become in better demand and dearer to buy. Tin plates without variation.

TALLOW.—Official market letter issued this evening :—

	s	d
Town tallow	63	
Fat by ditto	3	
Yellow Russian	62	6
Melted stuff	44	6
Rough ditto	27	0
Greaves	20	0
Good dregs	7	0

Imports this week 6,024 casks.

PROVISIONS.

In bacon we have a depreciation of prices, with a still downward tendency, causing a stagnant market. Best brands in fine sizeable Waterford bacon can be bought at 69s f.o.b., and good serviceable meat at 2s less. Butter market brisk at slightly increased rates.

METROPOLITAN CATTLE MARKET.

THURSDAY, Nov. 15.—To-day's market was seasonably well supplied with beasts as to number, but their general quality was very inferior. The few prime breeds on offer were mostly disposed of at full prices, but inferior stock gave way 2d per 8 lbs. The supply of sheep was only moderate. Prime Downs and half-breds realised Monday's currency, but long wools declined fully 2d per 8 lbs. Calves, the show of which was large, were very dull, and quite 6d per 8 lbs cheaper. Some inferior calves sold as low as 3s per 8 lbs.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	2	6	2	10	Prime Southdown sheep	5	2	5	4
Second quality ditto	3	0	3	6	Large coarse calves	3	0	3	10
Prime large oxen	3	10	4	4	Prime small ditto	4	0	4	6
Prime Scots, &c.	4	6	4	10	Large hogs	4	0	4	6
Coarse and inferior sheep	3	2	3	8	Small porkers	4	8	5	2
Second quality ditto	3	10	4	4	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	6	5	0	Quarter old store pigs	22	0	29	0

Total supply—Beasts, 1,100; sheep and lambs, 4,800; calves, 450; pigs, 340.
Foreign supply—Beasts, 600; sheep, 1,250; calves, 280.

NEWGATE AND LEADENHALL.

FRIDAY, Nov. 16.—Considerable heaviness prevails in these markets, owing to large arrivals, and prices continue to give way.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	4	2	8	Mutton, inferior	3	2	3	8
Middling ditto	2	10	3	4	— middling	3	10	4	0
Prime large	3	6	3	10	— prime	4	2	4	4
Prime small	4	0	4	2	Large pork	3	6	4	6
Veal	3	4	4	2	Small pork	4	8	5	2

HOP MARKET.

BOROUGH, Monday, Nov. 12.—The declaration of the duty has not, as was expected, effected any improvment in our market, which continues dull and inactive at a further decline in prices. Mid and East Kent, 8*l*, 17*l*, 22*l*; Weald Kents, 6*l*, 9*l*, 11*l*; Sussex, 6*l*, 8*l*, 10*l* 10s; Yearlings, 6*l*, 8*l* 8s, 11*l*.

FRIDAY, Nov. 16.—The market is more active this morning in consequence of the payment of the moiety of 1859 duty being postponed to the 1st of March, 1861, and the duty on this year's growth to the 16th of August, 1861.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Nov. 12.—During the past week the arrivals coastwise and by rail have been quite equal to the demand, and trade still continues dull. The following are this day's quotations :—York Regents, 110s to 130s; Lincolnshire do., 110s to 120s; Dunbar do., 120s to 140s; Perth, Forfar, and Fife do., 110s to 120s; French whites, 105s to 110s; Belgian do., 90s to 100s per ton.

THURSDAY, Nov. 15.—Fair supplies of potatoes continue to arrive at this market coastwise and by rail, and the market is now rather largely stored, and trade in consequence is very slow at the annexed rates:—York Regents, from 110s to 130s; Kent and Essex ditto, from 110s to 140s; Scotch ditto, from 100s to 120s; Dunbars, 120s to 150s; French, 90s to 105s; Belgian, 85s to 90s; Prussian, 85s to 95s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 5*l* 10s; clover, 3*l* 10s to 5*l* 15s; and straw, 1*l* 10s to 1*l* 18s per load. A moderate demand.

CUMBERLAND.—Meadow hay, 2*l* 10s to 5*l* 10s; clover, 3*l* 10s to 5*l* 15s; and straw, 1*l* 10s to 2*l* per load. Trade dull.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 5*l* 10s; clover, 3*l* 10s to 5*l* 17s; and straw, 1*l* 10s to 1*l* 18s per load. Trade inactive.

COAL MARKET.

FRIDAY, Nov. 16.—Wall's-end Hetton 22s—Braddyll's Hetton 21s—South Hartlepool 20s 6d—Cassop 20s 6d—Buddle's Hartley 17s 9d—Craghead 17s. 25 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 16.—We are rather quiet here this week, owing in a great measure to the public sales in London now in progress, and which will engage the attention of the trade more or less until the 7th proximo.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 16.—Corn market thinly attended; flour slow sale, at 6d per barrel and sack lower, wheat 2d cheaper. Indian corn 38s 6d to 39s for Galatz and mixed American oats; barley and beans dull and unchanged.

METALS..

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Nov. 16.—There has been only a languid demand for manufactured iron throughout the past week, but prices remain without alteration. In Scotch pig iron there have been some fluctuations during the week; the market, however, on the whole, closes with little or no variation in price. Manufactured copper continues in limited demand at previous rates. Spelter has rather improved, and more doing. Most other metals remain unaltered.

The Gazette.

TUESDAY, Nov. 13.

BANKRUPTS.

M. Fothergill, Upper Thames street, chemical manure merchant.
T. J. Nicks, Worship street, Finsbury square, Russia mat merchant.

N. Browne, Fleet street, hotel keeper.
B. Jones, Cardiff, painter and paperhanger.
R. Stewart, Wells, Somersetshire, draper.

DRURY LANE THEATRE.—On Monday, a new drama by Mr Watts Phillips, entitled "A Story of the '45," was brought out at this theatre. Considered as a drama, this is by no means one of Mr Phillips's best works. There are two scenes which become powerful through the fine acting of Mr Webster, and Mr Toole was, perhaps, never seen to such advantage as when he depicts the frantic rage of Flicker on perceiving the failure of his plans.

COMMERCIAL TIMES

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Nov. 3 amounted to 533,290*l*, and for the corresponding week of last year to 490,410*l*, showing an increase of 42,880*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 228,389*l*, and for the corresponding week of 1859 to 213,961*l* showing an increase of 14,428*l*.

MONMOUTHSHIRE.—The half-yearly report states that the receipts were 2,257*l* more than in the corresponding half-year in 1859, having been 59,235*l* and 56,678*l* respectively, and the working expenses 52 and 51 per cent. The general revenue account shows that there is a balance of 12,569*l* 18s 2d available for dividend on ordinary shares. As the 10*l* shares now rank as ordinary shares, the amount of the ordinary share capital is increased from 360,000*l* to 510,000*l*; and the committee recommend that a dividend (amounting, less income tax, to 12,218*l* 15s) at the rate of five per cent. per annum on ordinary shares, be declared payable on the 30th of November next, leaving 351*l* 3s 2d to be carried to the next half-yearly account.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Nov. 12.—The railway market was steady during the morning, although inactive, but declined in the afternoon partly in anticipation of the settlement, and partly from the rise in the rate of the Bank of France. The more important stocks left off ¼ to one half per cent. lower than on Saturday, except Caledonian, which improved ¼ per cent. In the colonial market there was an improvement in East India stocks. Grand Trunk of Canada remained dull at 20 to 21, while Great Western shares recovered to 11 to ¼. Foreign descriptions advanced during the early part of the day, but were less steady towards the close. The intelligence of a rally in New York from the late fall caused an active business at higher prices in the best known American railway securities. New York and Erie shares went to 33 to 34, and Illinois Central to 28 to 27 dis. Mines were again firm, and in several cases showed a fresh rise. Joint-stock bank shares were also in good demand. In miscellaneous descriptions a reduction took place in London Discount, National Discount, and Red Sea Telegraph.

TUESDAY, Nov. 13.—The railway market to-day was depressed by numerous sales, partly of stock held speculatively on borrowed money, and closed at an average decline of ¾ to 1 per cent. Midland, Lancashire and Yorkshire, and Great Western were chiefly affected. In colonial descriptions Grand Trunk of Canada stock recovered to 21 to ½ on repurchases to close speculative accounts for the fall. Great Western shares and Ceylon were also higher. Foreign railways were dull, and South Austrian and Lombardo-Venetian receded to par to ¼ pm. The late rally in American securities was well maintained. Mines were also generally steady. Joint-stock bank shares continued to advance. In miscellaneous descriptions an improvement took place in Red Sea Telegraph, and a decline in London General Omnibus.

WEDNESDAY, Nov. 14.—The announcement of the rise in the Bank rate caused a further decline in the railway market, from which there was only a slight recovery. Notwithstanding that the present quotations were for the new account, they were generally lower than those of yesterday. The market was rather unsteady at the close, although a fraction higher than at one period. Colonial stocks were depressed, but in a less degree than British; Grand Trunk of Canada receded to 20⅞ to 21½, and Great Western shares to 11. Foreign descriptions were flat, especially French, Brazilian, and Lombardo-Venetian; the latter closed at ¼ discount to par, and Pernambuco 4¼ to 4 discount. In American securities the bonds of the Illinois Central were quoted lower. Mines were inactive, but in several cases showed a fresh advance. Joint stock banks were also firm. In miscellaneous descriptions, Electric Telegraph stock declined, while Red Sea Telegraph shares were steady at 17 to ¼.

THURSDAY, Nov. 15.—The railway market was again flat during the greater part of the day, but slightly rallied in the latest hours of business. In the Colonial market Grand Trunk of Canada improved to 21 to ¼, and Great Western to 11 to ¼. Indian Stocks were dull. Foreign descriptions were also heavy, and another fall took place in South Austrian and Lombardo-Venetian, the final price being ⅜ to ½ discount ex div, or nearly 5s lower. No material change occurred in American railway securities. Mines and joint stock banks also closed the same as yesterday. In miscellaneous descriptions, Australian Agricultural, Scottish Australian Investment, and South Australian Land were firmer.

FRIDAY, Nov. 16.—The railway share market opened this morning with an improved appearance, and soon experienced a general advance. Lombardo-Venetian Railway shares improved to ⅜ to ½ dis., ex. int. A considerable improvement took place in Grand Trunk of Canada Railway stock. Great Western of Canada and Bahia shares were likewise firmer.

The Economist's Railway and Mining Share List.

THE PERFECT SUBSTITUTE FOR SILVER.

—The real NICKEL SILVER, introduced more than twenty-five years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern			Thread or Brunswick Pattern			Lily Pattern			King's or Military, &c.		
	£	s	d	£	s	d	£	s	d	£	s	d
12 Table Forks	1	13	0	2	4	0	2	10	0	2	15	0

1 Sugar Sifter	0	3	3	0	4	6	0	5	0	0	5	6
Total	9	19	9	13	10	3	14	19	6	16	4	0

Any article to be had singly at the same prices. An oak chest to contain the above, and a relative number of knives, &c., £2 15s. Tea and coffee sets, dish covers and corner dishes, cruet and liqueur frames, &c., at proportionate prices. All kinds of re-plating done by the patent process.

BEDSTEADS, BATHS, AND LAMPS.

—WILLIAM S. BURTON has SIX LARGE SHOW ROOMS devoted exclusively to the SEPARATE DISPLAY of LAMPS, BATHS, and METALLIC BEDSTEADS. The stock of each is at once the largest, newest, and most varied ever submitted to the public, and marked at prices proportionate with those that have tended to make his establishment the most distinguished in this country.

Bedsteads, from ..... 12s 6d to £20 0s each.
Shower Baths, from ..... 8s 0d to £6 0s each.
Lamps (Moderateur), from ..... 6s 0d to £7 7s each.
(All other kinds at the same rate.)
Pure Colza Oil ..... 4s 3d per gallon.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE

may be had gratis, and free by post. It contains upwards of 500 Illustrations of his Unlimited Stock of Sterling Silver and Electro Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot Water Dishes, Stoves, Fenders, Marble Chimneypieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bedroom Cabinet Furniture, &c., with Lists of Prices and Plans of the Twenty large Show Rooms, at 39 Oxford street, W.; 1, 1a, 2, 3, and 4 Newman street; 4, 5, and 6 Perry's place; and 1 Newman mews, London. Established 1820.

LE SOMMIER ELASTIQUE PORTATIF.

HEAL AND SON

have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome.

The "SOMMIER ELASTIQUE PORTATIF" is made in three separate parts, and when joined together has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse hair, it cannot harbour moth, to which the usual Spring Mattress is very liable; the prices, also, are much below those of the best Spring Mattresses, viz:—

			£	s	d
3 ft wide by 6 ft 4 in.	long	.....	2	5	0
3 ft 6 in.	—	.....	2	10	0
4 ft	—	.....	2	15	0
4 ft 6 in.	—	.....	3	0	0
5 ft	—	.....	3	5	0
5 ft 6 in.	—	.....	3	10	0

The "SOMMIER ELASTIQUE PORTATIF," therefore, combines the advantages of elasticity, durability, cleanliness, portability, and cheapness.

An Illustrated Catalogue of Bedsteads, Bedding, and Bed-Room Furniture sent free by post on application.

HEAL and SON, 196 Tottenham court road, W.

DR BUCHAN'S PATENT

SUGAR-COATED VEGETABLE PILLS, VEGETABLE SKIN OINTMENT, and CONCENTRATED VEGETABLE ESSENCE, for Purifying the Blood, Regulating the Bowels, and Removing Vitiated Humours, Bilious and Liver Complaints, Rheumatism, Gout, Scorbutic Affections, Costiveness, Skin Eruptions, deep-seated Ulcers, and all Diseases of the Nervous System, from whatever cause, &c., affording at once a new lease of life to the sickly and aged of both sexes, whilst in addition imparting a beautiful and clear complexion, so anxiously sought for by all. Proved by the sworn testimonies made before the Lord Mayor of London, and sitting Magistrates. Sold by Buchan and Co., Patentees, 22 Newman street, Oxford street, London, W., and all chemists in town and country. Prices:—Pills, per box, 1s 1½d, 2s 9d, and 11s; Ointment, per pot, 1s 1½d, and 2s 9d; Essence, per bottle, 11s, or family bottle containing four times that quantity, 33s. Agents:—Barclay, 75 Farringdon street; J. Sanger, 150 Oxford street; Hannay, 63 Oxford street; Butler, 4 Cheapside; Hooper, 43 King William street, London Bridge; R. Howden, 78 Gracechurch street; Pront, 229 Strand, &c., &c.

Just published, gratis, or post free for one stamp, to be had of all agents, and at 22 Newman street, Extracts from Dr Buchan's Work, entitled BUCHAN'S DOMESTIC MEDICINES, being a Book of Reference, containing instructions for the cure of every ailment incidental to man, woman, or child.

A BOON TO NERVOUS

SUFFERERS.—Twenty Thousand Copies of a Medical Book for gratuitous circulation. HENRY SMITH, Doctor of Medicine of the Royal University of Jena, &c., who has devoted fifteen years to the study and treatment of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, and Indigestion, will send free, for the benefit of Nervous Sufferers, a copy of the New Medical Guide, containing his highly successful mode of treatment, with necessary instructions by which sufferers may obtain a cure. Post free on receipt of a stamped directed envelope. Address Dr Henry Smith, 8 Burton crescent, Tavistock square, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c.,

for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

CANDLES, SOAPS, OILS, AND NIGHT LIGHTS

of all kinds. Five pounds worth sent free by railway.—WHITMORE and CRADDOCK, 16 Bishopsgate street within, London, E.C. (Lists of prices on applications.)

HOLLOWAY'S OINTMENT AND PILLS

are an Incomparable Remedy for Sores, Wounds, and Ulcers.—Mr James Newman, residing near Emyvale, was a dreadful sufferer for four years from running ulcers in his legs; he tried all means without effect; he had been in an hospital three months, and was turned out incurable; he then had recourse to Holloway's Ointment and Pills, and by a steady perseverance in their use for a few weeks he obtained an effectual cure, and his leg is now whole and sound, to the astonishment of his friends. It is idle to comment upon a fact of this nature. It speaks volumes. The medicine which can produce such results stands in no need of praise.

KEATING'S COUGH LOZENGES.—

Statistics show that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; he, therefore, prepared, during the wet and wintry season, with a supply of KEATING'S COUGH LOZENGES, which possess the virtue of averting, as well as of curing a Cough or Cold; they are good alike for the young or for the aged.

RESTORATION OF VOICE BY KEATING'S COUGH LOZENGES. Glasgow.

SIR,—I have great pleasure in informing you of the great good your excellent COUGH LOZENGES have done me. In December, 1845, I caught a severe cold from riding two or three miles, one very wet night, which settled in my lungs, and quite took away my voice, so that I could not speak above a whisper from that time until December last. I tried all kinds of medicines, but they were of no avail. I was then advised to try your Lozenges, which I did only to please my friends, but before I had finished a 2s 9d tin, my voice, to my great joy, came back as strong as ever.—I am, Sir, yours respectfully, JAMES MARTIN.

THOMAS KEATING, Esq.

Prepared and Sold in Boxes, 1s 1½d; and Tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, chemist, &c., 76 St Paul's Churchyard, London. Retail by all Druggists, &c.

Just published, cloth, vo, lettered, price One Shilling or free by post for eighteen stamps.

DR. KAHN'S PHILOSOPHY OF MARRIAGE.

Published and sold by J. Allen, 20 Warwick lane, Paternoster row; or from the Author's Address, 17 Harley street, Cavendish square, W.

Just published, 71st thousand, price 1s, post free for 13 stamps. Sold by Mann, 39 Cornhill, or direct from the Author.

DR LA'MERT ON SPERMATORRHŒA;

an Original Essay on the Treatment and Cure of NERVOUS and PHYSICAL DEBILITY, resulting from pernicious habits contracted in Youth, excesses in Manhood, or residence in Tropical Climates. With Cases and Engravings from Life, representing the various Organs in Health and Disease.

CONTENTS.

SECTION I.—The Physiology of the Generative Organs.
SECTION II.—Puberty—Manhood—The Morale of Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, and Physical Relations—Happy and Unhappy Unions—How to secure Healthy Offspring.
SECTION IV.—Youthful Abuse—The Secret Causes of Nervous Debility, Impotence in Man, and Sterility in Man and Woman.
SECTION V.—Spermatorrhœa, or Chronic Impotence: its History, Causes, and Moral Consequences—The Sterility of Age.

Dr LA'MERT, Honorary Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., is the only legally qualified practitioner who, for 20 years, has devoted his attention to the treatment of these disorders, which are so frequently aggravated by the unskilfulness of ignorant empirics, either self-styled physicians or surgeons, sometimes assuming names of eminent medical men, &c. At home for consultation daily, from Ten till Two, and from Six till Eight.

37 Bedford square, London.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE,

with Plain Directions for Perfect Restoration to Health and Vigour. By Dr J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion

Mr CURTIS, author of the above Medical Treatise, may be consulted from 10 till 3, and 6 till 8. Sundays from 10 till 1.

Sold by Piper and Co., 23 Paternoster row and Mann, 39 Cornhill, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

TO VOLUNTEERS AND THE PUBLIC.

WILSON'S BREECH-LOADING RIFLE.

Mr THOMAS WILSON begs to call the attention of Volunteers and the Public to his New BREECH-LOADING RIFLE, and to state that he has committed the management of the patent to Messrs Rabone Brothers and Co., of 47 Broad street, Birmingham, to whom all inquiries or other communications may be addressed.

This Rifle is well adapted for all branches of Her Majesty's service, and is pronounced by the highest authority to be the most simple, safe, and soldier-like form of breech-loader ever introduced. Among others it possesses the following important advantages:—

1st. The action is so simple and direct that it can be loaded and fired eight or ten times per minute.

2nd. It is free from screws, levers, and all complications, and is not liable to get out of order.

3rd. It is easy to manufacture, and can be made entirely by machinery.

4th. It is so constructed that accident from careless loading or otherwise is impossible.

5th. The breech-plug can be detached for cleaning be barrel, &c., in a moment, and can be replaced again as quickly for firing without the aid of tools. This facility would be occasionally valuable in rendering the gun useless to an enemy or mutinous troops.

6th. The action is always in good order, requiring no adjustment in use.

7th. The action is equally applicable to single and double-barrel guns, and may be used for sporting as well as military purposes.

8th. The principle can be applied to all ready-made Enfield guns at an immense saving to the country.

Volunteers are recommended not to purchase their arms till they have inspected the above Rifle.

A pattern may now be seen at Mr Lancaster's, No. 151 New Bond street, and at Mr Pritchett's, No. 86 St James's street, London, as well as at Messrs Rabone Brothers and Co., 47 Broad street, Birmingham. Every information as to cost and other details can be obtained at either of the places named

NEW THEATRE ROYAL ADELPHI.

JULLIEN FUND.
Committee Room—50 New Bond street.
The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.
The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

66 Queen street, London, 23rd August, 1860.
MESSRS R. WOTHERSPOON and CO., 46 Dunlop street, Glasgow,
DEAR SIRS,—I have, as requested, to-day visited the Royal Laundry, with reference to the advertisement of the Nottingham firm, who state that their starch has been used for many years in the Royal Laundry, and have been assured by Mr Thompson, the superintendent, that none but yourselves have any right to state that they supply starch to Her Majesty's Laundry, as no other starch is there used, nor has been used for some years, but the Glenfield Patent Starch. I have been further assured that your starch continues to give complete satisfaction, and that though trial has been made of samples of various starches, none of these have been found nearly equal in quality to the Glenfield.—I am, dear Sirs, your obedient servant, WM. BLACK.

FREDERICK DENT, Chronometer, Watch, and Clock Maker to the Queen and Prince Consort, and maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange.

CROSSE AND BLACKWELL, Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'a Two-Hole Black Pens, 46 King William street, London bridge."

TRADE 8/0 MARK.
BROWN AND POLSON'S PATENT CORN FLOUR.
The LANCET states,
"This is superior to anything of the kind known."
FIRST OF THE KIND Manufactured and Patented in the United Kingdom and France, as explained with Engravings in THE ILLUSTRATED LONDON NEWS, of May 26th. Supplied by BROWN and POLSON, to Her Majesty the Queen, by order from Buckingham Palace. It is in great favour wherever it has been made known, for Puddings, Blancmange, &c., preferred to the best arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers and Purveyors to Her Majesty: Paisley, Manchester, Dublin, and London.

DR DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL.
Prescribed by the most Eminent Medical Men as the safest, speediest, and most effectual remedy for CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners, prove that half-pint of Dr de Jongh's Oil is far more efficacious than a quart of any other kind. Hence, as it is incomparably the best, so it is likewise unquestionably the cheapest.
Palatableness, speedy efficacy, safety, and economy, unitedly recommend this unrivalled preparation to invalids. NO OTHER OIL CAN POSSIBLY PRODUCE THE SAME BENEFICIAL RESULTS.

Opinion of Sir HENRY MARSH, Bart., M.D., T.C.D., Physician in Ordinary to the Queen, in Ireland; President of the Royal College of Physicians in Ireland; Visiting Physician to Steevens' Hospital; Consulting Physician to the City of Dublin, St. Vincent, and Rotunda Hospitals, &c., &c.
"I have frequently prescribed Dr de Jongh's Light Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value.
"Merrion Square, Dublin,
"September 6, 1860."

Sold ONLY in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s., capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.
SOLE CONSIGNEES,
ANSAR, HARFORD, and CO., 77, STRAND, London, W.C.
CAUTION.—Beware of Proposed Substitutions.

PROSPECTUS.

Freehold land is universally acknowledged as the only real security for the investment of capital. Such is its importance in Great Britain that it commands a higher price than any other species of property, and in America, Australia, and all growing States, its value is continually increasing. In new countries the largest fortunes have been realised by the purchase and sale or cultivation of land.

This Company is formed for the purchase and development of a valuable freehold property, known as the Great Kanawha Estate, comprising 85,000 acres, or about 133 square miles of freehold land, in the centre of the United States, on the North-West border of the primary state of Virginia. It stands on high and hilly ground, with a valuable frontage to the Great Kanawha River, and within thirty miles of its confluence with the Ohio. The soil is naturally rich, well irrigated, and yields with little labour a constant succession of cereals. The timber is abundant and valuable. The coal, of a high class bituminous character, has been analysed, and found to be well adapted for both domestic and manufacturing purposes. Iron ore and building stone exist in great abundance. The estate is watered by two principal streams and numerous small tributaries, affording a ready conveyance to the Great Kanawha for timber, and supplying water-power at various points sufficient to propel machinery.

The Great Kanawha River is navigable for 70 miles from its junction with the Ohio; steamers ply regularly from Cincinnati and other ports on the Ohio, to the salt works on the Great Kanawha, 30 miles above the estate, —maintaining a regular intercourse throughout an immense territory. A great part of the Covington and Ohio Railway is already completed and in operation, and the Legislature have appropriated funds towards finishing it. It will pass in front of and near to the estate, connecting the Atlantic with the Ohio, and forming a continuous chain with the entire railway system of the Union.

THE PLAN OF OPERATIONS FOR THE DEVELOPMENT OF THIS ESTATE IS AS FOLLOWS:—

The Surface Land.—A very large part is good farming and grazing land, which it is proposed to sell in sections. From the numerous applications to purchase, it is estimated that sales to a considerable amount will be effected on the formation of the Company. The settlements on the lands so disposed of will materially increase the value of the sections reserved.

Timber.—From this source it is expected a large amount will be realised. The whole tract is covered with an abundance of valuable timber of various kinds, for which there are ready markets at good and remunerative prices.

Coal.—The estate abounds in coal of first-class character and various descriptions, suitable for domestic and manufacturing purposes. The mineral survey proves the seams to be numerous, varying from 4 to 13 feet in thickness, and to extend under about 15,000 acres. These can be worked by levels driven into the hill sides, and at favourable gradients for shipment to all the great markets in the Ohio and Mississippi valleys, containing a population of about ten millions. In addition to the demand created by this vast population, there are about 1,000 steamers plying on these important rivers which would take a large proportion of their supply from the Company's depots.

Iron.—The result of mineral researches shows that iron ore of rich character exists in large quantities on the estate, with abundance of limestone contiguous thereto; also building stone of the best quality.

After a careful examination of the various sources of revenue, it is estimated with great confidence that the net profits will yield an immediate dividend of 10 to 15 per cent. per annum, and that it will gradually increase; also that from the sales of land, shareholders will be reimbursed their entire capital within a comparatively short period.

The directors have provisionally contracted for the purchase of this estate, including all timber, coal, minerals, and rights, at the sum of £127,500, of which the vendor has agreed to take a large amount in the shares of the Company, and to extend the cash payments over a series of years. The title has been investigated and approved by Messrs Barney, Butler, and Parsons, the eminent Solicitors in New York, selected for that purpose by Messrs Marten, Thomas, and Hollams, the Company's Solicitors.

No shareholder will incur any liability beyond the amount of the shares allotted to him.

The directors intend to proceed with the operations of the Company when such an amount of capital as they are assured will be adequate has been subscribed.

Application for shares must be made in the annexed form. Each applicant will be required to pay into the bankers of the Company ten shillings per share on the number of shares applied for, in exchange for which a receipt will be given; and to make a further payment of ten shillings per share on such shares as shall be allotted to him in the allotment. In the event of the directors allotting less than the whole number applied for, the amount paid into the bankers will be applied towards the further payment of ten shillings per share payable on the number allotted, but in case no allottment be made, the money so lodged will be forthwith returned in full.

Pamphlets, giving full details of property, prospectuses, reports, forms of application for shares, and of bankers' receipts for deposits, may be obtained from Messrs Joshua Hutchinson and Son, Angel Court, Throgmorton street, London, Brokers to the Company; from the Solicitors; or at the Office of the Company, 113 Fenchurch street, London, E.C., where plans of the properties, and various specimens of the coal, may be seen and examined.

THE GREAT KANAWHA COMPANY (LIMITED).

OFFICES—No. 113 Fenchurch street, London, E.C.

Capital, £200,000, in 40,000 Shares at £5 each. Deposit, 10s per Share on application.

SECRETARY—G. R. Haywood, Esq.

The objects of this Company are to purchase cotton direct from the grower in India, Australia, and other countries, and to afford encouragement to the general cultivation of cotton. The first operations of the Company will be directed to the district of Dharwar, in India. The Government is now constructing a road to connect the cotton districts of Dharwar with the new port of Sedashevaghur, at which port a cotton pier will be erected, which the Company will have the advantage of using. The directors are in possession of the fullest information, derived from merchants as well as from Government officers on the spot, proving that there is a wide and exceedingly profitable field open for the action of this Company. Abundance of good and cheap cotton may be obtained, capital chiefly being wanted for its purchase and to extend production.

The formation of this Company has grown out of the active exertions of the Cotton Supply Association, and the provisional directors confidently appeal to the spinners and manufacturers for co-operation in carrying out the important object they have in view; and before subscriptions can be received from the general public it is intended that the first half of the proposed capital shall be subscribed by the cotton trade.

Clean cotton can be purchased in many parts of India at prices ranging from 1d to 2½d per lb, and, with economical management, the Company has the prospect, in a reasonable time, of declaring the most satisfactory dividend.

Further information, prospectuses, &c., may be obtained on application to

O. R. HAYWOOD, Secretary.

1 Newall's buildings, Market street, Manchester.

FORM OF APPLICATION FOR SHARES.

To the Provisional Directors of the Cotton Company (Limited).

Be pleased to allot me shares of £100 each in the Cotton Company (Limited).

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

CONTRACT FOR LEATHER LEGGINGS.

Department of the Comptroller for Victualling and Transport Service, Somerset place, 15th Nov., 1860.

The Commissioners for executing the Office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, do hereby give NOTICE, that on THURSDAY, the 29th inst., at half-past ONE o'clock, they will be ready to treat with such persons as may be willing to contract for supplying and delivering into Her Majesty's Victualling Stores at DEPTFORD, 3,000 Pairs of LEATHER LEGGINGS, for the use of the Royal Marines, to be delivered within six weeks from the date of the contract, or earlier if preferred, by the party tendering.

A Pattern of the Leggings may be seen at the Marine office, New street, Spring gardens, between the hours of 11 and 2.

No Tender will be received unless made on the printed form provided for the purpose, and which may be obtained on application to this department.

Particular attention is called to the recent modifications of the conditions of the contracts, which may be seen in the said department.

No Tender will be received after half-past one o'clock on the day of treaty; and it will not be required that the party tendering, or an agent on his behalf, should attend at the office on the day of contract, as the result of the offer received from each person will be communicated to him and his proposed sureties in writing.

Every Tender must be addressed to the Secretary of the Admiralty, and bear in the left-hand corner the words "Tender for Leggings," and must also be delivered at Somerset house.

BRITISH SYRIAN RELIEF FUND.

PRESIDENT—Lord Stratford de Redcliffe.

CHAIRMAN OF THE EXECUTIVE COMMITTEE—Sir Moses Montefiore, Bart

The Contributions of the benevolent throughout the United Kingdom are most earnestly solicited on behalf of the perishing multitudes, surviving victims of the late frightful massacres in Syria. The most recent official accounts received by the Committee are perfectly appalling, and unless the British public exert, in this emergency, their wonted beneficence, by contributing through the Committee money, and such material relief as must be required by the homeless, the naked, the starving, and the sick, the mortality among the sufferers, as winter approaches, will be frightfully extensive.

Donations of provisions, clothing, medicine, tents, &c., will be sent out free of expense, if addressed to the "British Syrian Relief Committee," at the Victoria Dock Warehouse, Steel yard, Upper Thames street, E.C.; or 4 York buildings, Liverpool Persons sending goods are requested to inform by letter, the Secretary, Mr Cyrus Edmonds, 12 York buildings, Adelphi.

Offers to undertake needlework will be thankfully accepted, and the cut out Syrian patterns or materials may be obtained from the Ladies' Committee, by application to their Honorary Secretary, 12 York buildings, Adelphi, London.

The following Bankers receive Subscriptions to the Fund:—Messrs Barclay, Bevan, and Co.; Glyn and Co.; Robarts, Curtis, and Co.; Smith, Payne, and Co.; Williams, Deacon, and Co.; Robarts, Lubbock, and Co.; Dimsdale, Drewett, and Co.; Heywood, Kennard, and Co.; Ransom, Bouverie, and Co.; Child and Co.; Prsed and Co.; Drummond and Co.; Coutts and Co.; Cocks and Co.; Call, Marten, and Co.; and the following Banking Companies: The London and Westminster Bank, Lothbury, and all its branches; Union Bank; London Joint Stock Bank; London and County Bank; the National Bank of Ireland, and all its branches; the Ottoman Bank; the National Bank of Scotland, and all its branches; and Jones Lloyd and Co.

SIR C. E. EARDLEY, BART., }
SIR JAS. FERGUSSON, BART., } Hon. Secretaries.
J. P. KENNARD, ESQ., 4 Lombard street, Treasurer.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

SPECIAL NOTICE.

Policies issued on or before 31st December, 1860, will receive at next division One Year's Bonus more than those issued after that date, and the Bonus thus acquired will also participate at subsequent divisions of profits.

At the last division, in May, 1860, a Bonus at the rate of £1 12s 6d per cent. per annum on the original Sums Assured and previous Additions was declared. By this mode of division the Rate and Amount of Bonus on the original sum assured increases with the Age of the policy thus:—

	Per cent. per ann. £ s d
On a policy of 5 years' standing the rate was	1 12 6
Do..... 10	1 14 1
Do..... 20	2 0 10
Do..... 30	2 8 10
Do..... 40	2 15 11
Do..... 45	3 6 0

The Accumulated Funds exceed £3,360,000, and the Annual Revenue exceeds £430,000.

Prospectuses, Reports, and Forms of Proposal, will be supplied by the Head Office and Agencies.

THE ECONOMIC LIFE ASSURANCE SOCIETY, 6 New Bridge street, Blackfriars, London; established 1823.

DIRECTORS.

Robert Biddulph, Esq., Chairman.
William Routh, Esq., Deputy-Chairman.

Alfred K. Barber, Esq.	Sir A. Duff Gordon, Bart.
Henry Barnett, Esq.	Rear-Admiral R. Gordon.
The Right Hon. E. Pleydell Bouverie, M.P.	Charles Morris, Esq.
	George K. Rickards, Esq.
Edward Charrington, Esq.	A. K. Stephenson, Esq.
Pascoe Charles Glyn, Esq.	

ACTUARY—James John Downes, Esq., F.R.A.S.

SECRETARY—Alexander Macdonald, Esq.

At the Thirty-Seventh Annual Meeting of the Society, held the 17th March, 1860, Robert Biddulph, Esq., the Chairman of the Society, stated the following particulars relative to the results of the business in 1859 as compared with those of 1858:—

	Policies Issued.	Sums Assured. £	New Premiums. £
1859	723	530,427	18,354
1858	468	323,670	10,273
Increase	255	206,757	8,081

The Society offers the following advantages:—

The lowest rates of premium on the mutual system.

The whole of the profits divided among the policyholders every fifth year.

Reversionary bonuses have been added to the policies to the extent of £1,365,000.

The last bonus, declared in 1859, which averaged £65 per cent. on the premiums paid, amounted to £475,000.

8,256 policies are now in force, yielding an annual income of £198,165, assuring the sum of £6,345,457, which, with £638,192 bonus additions, makes a total of £7,183,649.

The invested capital is £1,815,696, producing upwards of £72,000 per annum, thus making the present annual income of the Society above £260,000.

Service in the Militia, Yeomanry, or Volunteer Corps will not affect the validity of policies.

Prospectuses and further particulars may be obtained on application to

ALEXANDER MACDONALD, Secretary.

London: J. Churchill, and to be had of all booksellers

SUPPLEMENT

TO THE

ECONOMIST.

MEMOIR

OF THE

RIGHT HON. JAMES WILSON.

BY HIS SON-IN-LAW,

WALTER BAGEHOT, ESQ.

LONDON:

PUBLISHED AT THE ECONOMIST OFFICE, 340 STRAND.

MDCCCLX.

MEMOIR

OF THE

RIGHT HONOURABLE JAMES WILSON.

PERHAPS some of the subscribers to the ECONOMIST would not be unwilling to read a brief memoir of Mr Wilson, even if the events narrated were in no respect peculiar. They might possibly be interested in the biography of an author of whose writings they have read so many, even if the narrative related no marked transitions and no characteristic events. But there were in Mr Wilson's life several striking changes. The scene shifts from the manufactory of a small Scotch hatter, in a small Scotch town, to London—to the Imperial Parliament,—to the English Treasury,—to the Council Board of India. Such a biography may be fairly expected to have some interest. The life perhaps of no *Political Economist* has been more eventful.

James Wilson was born at Hawick, in Roxburghshire, on the 3rd of June, 1805. His father, of whose memory he always spoke with marked respect, was a thriving man of business, extensively engaged in the woollen manufacture of that place. He was the fourth son in a family of fifteen children, of whom, however, only ten reached maturity. Of his mother, who died when he was very young, he scarcely retained any remembrance in after life. As to his early years little is now recollected, except that he was a very mild and serious boy, usually successful during school hours, but not usually successful in the play-ground.

As Mr Wilson's father was an influential Quaker, he was sent when ten years old to a Quaker school at Ackworth, where he continued for four years. At that time—it may surprise some of those who knew him in later life to be told—he was so extremely fond of books as to wish to be a teacher; and as his father allowed his sons to choose their line in life, he was sent to a seminary at Earlscome in Essex, to qualify himself for that occupation. But the taste did not last long. As we might expect, the natural activity of his disposition soon induced him to regret his choice of a sedentary life. He wrote to Hawick, "I would rather be the most menial servant in my father's mill than be a teacher"; and he was permitted to return home at once.

Many years later he often narrated that, after leaving Earlscome, he had much wished to study for the Scottish bar, but the rules of the Society of Friends, as then understood, would not allow his father to consent to the plan. He was sometimes inclined half to regret that he had not been able to indulge this taste, and he was much pleased at being told by a great living advocate that "if he had gone to the bar he would have been very successful." But at the time there was no alternative, and at sixteen he accordingly commenced a life of business. He did not, however, lose at once his studious predilections. For some years at least he was in the habit of reading a good deal, very often till late in the night. It was indeed then that he acquired most of the knowledge of books which he ever possessed. In later life he was much too busy to be a regular reader, and he never acquired the habit of catching easily the contents of books or even of articles in the interstices of other occupations. Whatever he did, he did thoroughly. He would not read even an article in a newspaper if he could well help doing so; but if he read it at all, it was with as much slow, deliberate attention as if he were perusing a Treasury minute.

At the early age we have mentioned he commenced his business life by being apprenticed to a small hat manufacturer at Hawick; and it is still remembered that he showed remarkable care and diligence in mastering all the minutiæ of the trade. There was, indeed, nothing of the *amateur* man of business about him at any time. After a brief interval, his father purchased his master's business for him and for an elder brother, named William, and the two brothers in conjunction continued to carry it on at Hawick during two or three years with much energy. So small a town, however, as Hawick then was, afforded no scope for enterprise in this branch of manufacture, and they resolved to transfer themselves to London.

Accordingly, in 1824, Mr Wilson commenced a mercantile life in London (the name of the firm being Wilson, Irwin, and Wilson), and was very prosperous and successful for many years. His pecuniary gains were considerable, and to the practical instruction which he then obtained he always ascribed his success as an economist and a financier. "Before I was 20 years of age," he said at Devonport in 1859, "I was a partner in a firm in London, and I can only say if there is in my life one event which I regard with satisfaction more than another, it is that I had then an opportunity of obtaining experience by observation which has contributed in the main to what little public utility I have since been to my country. During these few years I became acquainted—well acquainted—with the middle classes of this country. I also became acquainted in some degree with the working classes; and also, to a great extent, with the foreign commerce of this country in pretty nearly all parts of the world; and I can only say the information and the experience I thus derived have been to me in my political career of greater benefit than I can now describe."

In 1831, the firm of Wilson, Irwin, and Wilson was dissolved by mutual consent. But Mr Wilson (under the firm of James Wilson and Co.) continued to carry on the same kind of business, and continued to obtain the same success. He began in 1824 with 2,000*l*, the gift of his father, and in 1837 was worth nearly 25,000*l*, —a fair result for so short a period, and evincing a steady business-like capacity and judgment; for it was the fruit not of sudden success in casual speculation, but of regular attention during several years to one business. From circumstances which we shall presently state, he was very anxious that this part of his career should be very clearly understood.

During these years Mr Wilson led the usual life of a prosperous and intellectual man of business. He married,* and formed an establishment suitable to his means, first near his manufactory in London, and afterwards at Dulwich. He took great pleasure in such intellectual society as he could obtain; was especially fond of conversing on Political Economy, Politics, Statistics, and

* He was married on the 5th January, 1832, to Miss Elizabeth Preston, of Newcastle, and this has given rise to a statement that he was once in business at Newcastle. This is, however, an entire mistake. He was never in business anywhere except at Hawick and London. It may be added, that on the occasion of his marriage he voluntarily ceased to be a member of the Society of Friends, for whom he always, however, retained a high respect. During the rest of his life he was a member of the Church of England

the other subjects with which he was subsequently so busily occupied.* Through life it was one of his remarkable peculiarities to be a *very animated* man, talking by preference and by habit on *inanimate* subjects. All the *verve*, vigour, and life which lively people put into exciting pursuits, he put into topics which are usually thought very dry. He discussed the Currency or the Corn Laws with a relish and energy which made them interesting to almost every one. "How pleasant it is," he used to say, "to talk a subject out," and he frequently suggested theories in the excitement of conversation upon his favourite topics which he had never thought of before, but to which he ever afterwards attached, as was natural, much importance. The instructiveness of his conversation was greatly increased as his mind progressed and his experience accumulated. But his genial liveliness and animated vigour were the same during his early years of business life, as they were afterwards when he filled important offices of state in England and in Calcutta. Few men can have led a more continuously prosperous and happy life than he did during those years. Unfortunately it was not to continue.

In 1836, or thereabouts, Mr Wilson was unfortunately induced to commence a speculation in indigo, in conjunction with a gentleman in Scotland. It was expected that indigo would be scarce, and that the price would rise rapidly in consequence. Such would indeed appear to have been the case for a short period, since the first purchases in which Mr Wilson took part yielded a profit. In consequence of this success, he was induced to try a larger venture,—indeed to embark most of his disposable capital. Unfortunately, the severe crisis of 1837 disturbed the usual course of all trades, and whether from that cause or from some other, indigo, instead of rising rapidly, fell rapidly. The effect on Mr Wilson's position may be easily guessed. A very great capitalist would have been able to hold till better times, but he was not. "On the first of January," he said at Devonport, "in a given year, my capital was nearer 25,000*l* than 24,000*l*, and it was all lost." Numerous stories were long circulated—most of them exaggerated, and the remainder wholly untrue, as to this period of misfortune in Mr Wilson's life; but the truth is very simple. As is usual in such cases, various arrangements were proposed and agreed to, were afterwards abandoned, and others substituted for them. A large bundle of papers carefully preserved by him records with the utmost accuracy the whole of the history. The final result will be best described in his own words at Devonport, which precisely correspond with the balance sheets and other documents still in existence. They are part of a speech in answer to a calumnious rumour that had been circulated in the town:—

"Now, how did I act on this occasion? and this is what this placard has reference to. By my own means alone I was enabled at once to satisfy in full all claims against me individually, and to provide for the early payment of one-half of the whole of the demands against the firm, consisting of myself and three partners. I was further enabled, or the firm was enabled, at once to assign property of sufficient value, as was supposed, to the full satisfaction of the whole of the remainder of the liabilities. An absolute agreement was made, an absolute release was given to all the partners; there was neither a bankruptcy nor an insolvency, neither was the business stopped for one day. The business was continued under the new firm, with which I remained a partner, and from which I ultimately retired in good circumstances. Some years afterwards it turned out that the foreign property which was assigned for the remaining half of the debts of the old firm, of which I was formerly a partner, proved insufficient to discharge them. The legal liability was, as you know, all gone; the arrangement had been accepted—an arrangement calculated and believed by all parties to be sufficient to satisfy all claims in full; but when the affairs of the whole concern were fully wound up, finding that the foreign property had not realised what was anticipated, I had it, I am glad to say, in my power to place at my banker's, having ascertained the amount, a sum of money to discharge all the remainder of that debt, which I considered morally, though not legally due. This I did without any kind of solicitation—the thing was not named to me, and I am quite sure never were the gentlemen more taken by surprise than when a friend of mine waited on them privately in London, and presented each of them with a cheque for the balance due to them. Now, perhaps, I have myself to blame for this anonymous attack. I probably brought it on myself, for I always felt that if this matter were made public, it might look like an act of ostentatious obtrusion on my part, and therefore, when I put aside the sum of money necessary for the purpose, I made a request, in the letter I wrote to my bankers, desiring them as an especial favour that they would instruct their clerks to mention the matter to no one; and in order that it should be perfectly private, I employed a personal friend of my own in the city of London, in whose care I placed the whole of the cheques, to wait on those gentlemen and present each of them with a cheque, and I obtained from him a promise, and he from them, not to name the circumstance to any one." The secrecy thus enjoined was well preserved. Many of the most intimate friends of Mr Wilson, and his family also, were entirely unacquainted with what he had done, and learnt it only through the accidental medium of an electioneering speech. It may be added, too, that some of those who knew the circumstances, and who have watched Mr Wilson's subsequent career, believe that at no part of his life did he show greater business ability, self-command, and energy, than at the crisis of his mercantile misfortunes.

It is remarkable that the preface to Mr Wilson's first pamphlet, on the "Influences of the Corn Laws," is dated the 1st March, 1839, the precise time at which he was negotiating with his creditors for a proper arrangement of his affairs; and to those who have had an opportunity of observing how completely pecuniary misfortune unnerves and unmans men—mercantile men, perhaps, more than any others—it will not seem unworthy of remark that a careful pamphlet, with elaborate figures, instinct in every line with vigour and energy, should emanate from a man struggling with extreme pecuniary calamity, and daily harassed with the painful details of it.

After 1839 Mr Wilson continued in business for several years, and with very fair success, considering that his capital was much diminished and that the hat manufacture was from temporary circumstances in a state of transition. He finally retired in 1844, and invested most of his capital in the foundation and extension of this journal.

These facts prove, as we believe, the conclusion which he was very desirous to make clear—that, though unfortunate on a particular occasion, Mr Wilson was by no means, as a rule, unsuccessful in business. He did not at all like to have it said that he was fit to lay down the rules and the theory of business, but not fit to transact business itself. And the whole of his life, on the contrary, proves that he possessed an unusual capacity for affairs—an extraordinary *transacting* ability.

It may, however, be admitted that Mr Wilson was in several respects by no means an unlikely man to meet with, especially in early life, occasional misfortune. To the last hour of his life he was always sanguine. He naturally looked at everything in a bright and

* Among his friends of this period should be especially mentioned Mr G. R. Porter, of the Board of Trade, the author of "The Progress of the Nation," whose mind he described twenty years later as the most accurate he had ever known.

cheerful aspect; his tendency was always to form a somewhat too favourable judgment both of things and men. One proof of this may be sufficient;—he was five years Secretary of the Treasury, and he did not leave it a suspicious man.

Moreover, Mr Wilson's temperament was very active and his mind was very fertile. And though in many parts of business these gifts are very advantageous, in many also they are very dangerous, if not absolutely disadvantageous. Frequently they are temptations. Capital is always limited; often it is *very* limited; and therefore a man of business, who is managing his own capital, has only defined resources, and can engage only in a certain number of undertakings. But a person of active temperament and fertile mind will soon chafe at that restriction. His inventiveness will show him many ways in which money might easily be made, and he cannot but feel that with his energies he would like to make it. If he have besides a sanguine temperament, he will believe that he can make it. The records of unfortunate commerce abound in instances of men who have been unsuccessful because they had great mind, great energy, and great hope, but had not money in proportion. Some part of this description was, perhaps, applicable to Mr Wilson in 1839, but exactly how much cannot, after the lapse of so many years, be now known with any accuracy.

Mr Wilson's position in middle life was by no means unsuitable to a writer on the subjects in which he afterwards attained eminence. He had acquired a great knowledge of business through a long course of industrious years; he had proved by habitual success in business that his habitual judgment on it was sound and good. If he had been a man of only ordinary energy and only ordinary ability, he would probably have continued to grow regularly richer and richer. But, by a single error natural to a very sanguine temperament and a very active mind, he had destroyed a great part of the results of his industry. He had a new career to seek. He was willing to expend on it the whole of his great energies. He was ready to take all the pains which were necessary to fit himself for success. When he wrote his first pamphlet, he used to say that he thought "the sentences never would come right." In later life he considered three leading articles in the Economist, full of facts and figures, an easy morning's work, which was quite compatible with the transaction of much other business. Mr Wilson was a finished man of business obliged by necessity to become a writer on business. Perhaps no previous education and no temporary circumstances could be conceived more likely to train a great financial writer and to stimulate his powers.

In 1839, Mr Wilson published his "Influences of the Corn Laws"; in 1840, the "Fluctuations of Currency, Commerce, and Manufactures"; in 1841, "The Revenue; or, What should the Chancellor do?" in September, 1843, he established the Economist. The origin of the latter may be interesting to our readers. Mr Wilson proposed to the editor of the *Examiner* that he should furnish gratuitously a certain amount of writing to that journal on economical and financial subjects; but the offer was declined, though with some regret, on account of the expense of type and paper. A special paper was therefore established, which proved in the end as important as the *Examiner* itself. From the first, Mr Wilson was the sole proprietor of the Economist, and though he obtained pecuniary assistance—especially from the kindness of Lord Radnor—he embarked some capital of his own in it from the first, and afterwards repaid all loans made to him for the purpose of establishing it.

It would not be suitable to the design of this memoir to give any criticism of Mr Wilson's pamphlets, still less would it become the Economist to pronounce in any manner a judgment on itself. Nevertheless, it is a part of the melancholy duty we have undertaken to give some account of Mr Wilson's characteristic position as a writer on Political Economy, and of the somewhat peculiar mode in which he dealt with that subject.

Mr Wilson dealt with Political Economy like a practical man. Persons more familiar with the literature of the science might very easily be found. Mr Wilson's faculty of reading was small, nor had he any taste for the more refined abstractions in which the more specially scientific Political Economists had involved themselves. "Political Economy," said Sydney Smith, "is become in the hands of Malthus and Ricardo, a school of metaphysics. All seem to agree what is to be done; the contention is how the subject is to be divided and defined. *Meddle with no such matters.*" We are far from alleging that this saying is just; nor would Mr Wilson have by any means assented to it. But though he would have disavowed it in theory, it nevertheless embodies his instinctive feeling and characteristic practice. He "meddled with no such matters"; though he did not deny the utility of theoretical refinements, he habitually and steadily avoided them.

Mr Wilson's predominating power was what may be called a business-imagination. He had a great power of conceiving transactions. Political Economy was to him the science of buying and selling, and of the ordinary bargains of men he had a very steady and distinct conception. In explaining such subjects he did not begin, as Political Economists have been wittily said to do, with "Suppose a man upon an island," but "What they *do* in the city is this." "The real course of business is so and so." Most men of business will think this characteristic a great merit, and even a theoretical economist should not consider it a defect. The *practical* value of the science of political economy (the observation is an old one as to *all* sciences) lies in its "middle principles." The extreme abstractions from which such intermediate maxims are scientifically deduced lie at some distance from ordinary experience, and are not easily made intelligible to most persons, and when they *are* made intelligible, most persons do not know how to use them. But the intermediate maxims themselves are not so difficult; they are easily comprehended and easily used. They have in them a practical life, and come home at once to the "business" and the "bosoms" of men. It was in these that Mr Wilson excelled. His "business-imagination" enabled him to see "what men did," and "why they did it"; "why they ought to do it," and "why they ought not to do it." His very clear insight into the real nature of mercantile transactions made him a great and almost an instinctive master of *statistical selection*. He could not help picking out of a mass of figures those which would tell most. He saw which were really material; he put them prominently and plainly forward, and he left the rest alone. Even now if a student of parliamentary papers should alight on a return "moved for by Mr Wilson," he will do well to give to it a more than ordinary attention, for it will be sure to contain something attainable, intelligible, and distinct.

Mr Wilson's habit of always beginning with the facts, always arguing from the facts, and always ending with a result applicable to the facts, obtained for his writings an influence and a currency more extensive than would have been anticipated for any writings on Political Economy. It is not for the Economist to speak of the Economist; but we may observe that through the pages of this journal certain doctrines, whether true or false, have been diffused, far more widely than they ever were in England before,—far more widely than from their somewhat abstract nature we could expect them to be diffused,—far more widely than they are diffused in any other country but this. The business-like method and vigorous simplicity of Mr Wilson's

arguments converted very many ordinary men of business, who would have distrusted any theoretical and abstruse disquisition, and would not have appreciated any elaborate refinements. Nor was this special influence confined to mercantile men. It penetrated where it could not be expected to penetrate. The Duke of Wellington was, perhaps, more likely to be prejudiced against a theoretical Political Economist than any eminent man of his day; he belonged to the "pre-scientific period"; he had much of the impatient practicality incident to military insight; he was not likely to be very partial to the "doctrines of Mr Huskisson";—nevertheless, the Duke early pointed out Mr Wilson's writings to Lord Brougham as possessing especial practical value; and when the Duke at a much later period was disposed to object to the repeal of the Navigation Laws, Mr Wilson had a special interview to convince him of its expediency.

Nor is this faculty of exposition by any means a trifling power. On many subjects it is a common saying "that he only discovers who proves"; but on practical politics we may almost say that he only discovers who convinces. It is of no use to have practical truths received by extraordinary men, unless they are also accepted by ordinary men. Whether Mr Wilson was exactly a great writer we will not discuss: but he was a great *belief producer*; he had upon his own subjects a singular gift of *efficient* argument;—a peculiar power of bringing home his opinions by convincing reasonings to convincible persons.

The time at which Mr Wilson commenced his career as an economical writer was a singularly happy one. An economical century has elapsed since 1839. The Corn Laws were then in full force, and seemed likely to continue so; the agriculturists believed in them, and other classes acquiesced in them; the tentative reforms of Mr Huskisson were half-forgotten; our tariff perhaps contained some specimen of every defect—it certainly contained many specimens of most defects; duties abounded which cramped trade, which contributed nothing to the exchequer, which were maintained that a minority might believe they profited at the expense of the majority; all the now settled principles of commercial policy were unsettled; the "currency" was under discussion; the Bank of England had been reduced to accept a loan from the Bank of France; capitalists were disheartened and operatives disaffected; the industrial energies, which have since multiplied our foreign commerce, were then effectually impeded by legislative fetters and financial restraints. On almost all of these restraints Mr Wilson had much to say.

Upon the Corn Laws Mr Wilson developed a theory which was rare when he first stated it, but which was generally adopted afterwards, and which subsequent experience has confirmed. He was fond of narrating an anecdote which shows his exact position in 1839. There had just been a meeting of the Anti-Corn Law League at Manchester, and some speakers had maintained, with more or less vehemence, that the coming struggle was to be one of class against class, inasmuch as the Corn Laws were beneficial to the agriculturists, though they were injurious to manufacturers. The tendency of the argument was to set one part of the nation against another part. Mr Wilson was travelling in the North, and was writing in a railway carriage part of the "Influences of the Corn Laws." By chance a distinguished member of the League, whom Mr Wilson did not know, happened to travel with him, and asked him what he was about. "I am writing on the Corn Laws," said Mr Wilson, "something in answer to the rubbish they have been talking at Manchester." "You are a bold man," was the reply; "Protection is a difficult doctrine to support by argument." But it soon appeared that Mr Wilson was the better Free-trader of the two. He held that the Corn Laws were injurious to all classes; that the agriculturists suffered from them as much as the manufacturers; that, in consequence, it was "rubbish" to raise a class-enmity on the subject, for the interest of all classes was the same. "We cannot too much lament," he says in his "Influences of the Corn Laws," "and deprecate the spirit of violence and exaggeration with which this subject has always been approached by each party, which no doubt has been the chief cause why so little of real truth or benefit has resulted from the efforts of either; the arguments on either side have been supported by such absurd and magnified statements of the influences of those prohibitory laws on their separate interests, as only to furnish each other with a good handle to turn the whole argument into ridicule. It therefore appears to be necessary to a just settlement of this great question, that these two parties should be first reconciled to a correct view of the real influences thus exerted over their interests, and the interests of the country at large; to a conviction that the imaginary fears of change on the one hand, and the exaggerated advantages expected on the other hand, are equally without foundation; that there are in reality no differences in the solid interests of either party; and that *individuals*, *communities*, or *countries* can only be prosperous in proportion to the prosperity of the whole." And he proposed to prove "that the agricultural interest has derived no benefit, but great injury, from the existing laws; and that the fears and apprehensions entertained of the ruinous consequences which would result to this interest by the adoption of a free and liberal policy with respect to the trade in corn are without any foundation; that the value of this property, instead of being depreciated, on the aggregate, would be rather enhanced, and the general interests of the owners most decidedly benefited thereby;" and, "that, while incalculable benefit would arise to the manufacturing interest and the working population generally, in common with all classes of the community, from the adoption of such policy, nothing can be more erroneous than the belief that the price of provisions or labour would on the average be thereby cheapened, but that, on the contrary, the tendency would rather be to produce, by a state of general increased prosperity, a higher average rate of each."

Whatever might be thought in 1839, in 1860 we can on one point have no doubt whatever. The repeal of the Corn Laws has been followed by the exact effect which Mr Wilson anticipated. Whether his argument was right or wrong, the result has corresponded with his anticipation. The agriculturists have prospered more,—the manufacturers, the merchants, the operatives, all classes in a word have prospered more, since the Corn Laws were repealed than they ever did before. As to abstract questions of politics there will always be many controversies; but upon a patent contemporaneous fact of this magnitude there cannot be a controversy.

It is indisputable also that, for the purposes of the Anti-Corn Law agitation, Mr Wilson's view was exceedingly opportune. Mr Cobden said not long ago (we quote the substance correctly even if the words are wrong), "I never made any progress with the Corn Law question while it was stated as a question of class against class." And a careful inquirer will find that such is the real moral of the whole struggle. If it had continued to be considered solely or mainly as a manufacturer's question, it might not have been settled to this hour. In support of this opinion Mr Wilson made many speeches at the meetings of the Anti-Corn Law League, though he had little taste for the task of agitation.

We cannot give even an analysis of Mr Wilson's

arguments—our space is too brief—but we will enumerate one or two of the principal points.

He maintained that, under our protective laws, the agriculturists never had the benefit of a high price, and always suffered the evil of a low price. When our crop was scanty, it was necessary to sell the small quantity at a high price, or the farmer could not be remunerated. But exactly at that moment foreign corn was permitted by law to be imported. In consequence, during bad years the farmer was exposed to difficulty and disaster, which were greater because, in expectation of an English demand, large stocks were often hoarded on the Continent, and at once poured in to prevent the home-grower compensating himself for a bad harvest by an equivalent rise of price.

Nor was the farmer better off in very plentiful years. There was a surplus in this country, and that surplus could not be exported, for the price of wheat was always lower abroad than here. The effect is evident. As corn is an article of the first necessity, a certain quantity of it will always be consumed, but more than that quantity will not be readily consumed. A slight surplus is, therefore, invariably found to lower the price of such articles excessively. In very good years the farmer had to sell his crop at an unremuneratingly low price, while in very bad years he was prevented from obtaining the high price which alone could compensate him for his outlay. Between the effects of the two sorts of years his condition was deplorable, and Parliamentary Committees were constantly appointed to investigate it.

Mr Wilson also explained how much these fluctuations in price contracted the home demand for agricultural produce. The manufacturing districts were, he showed, subjected by the Corn Laws to alternate periods of great excitement and great depression. When corn was very cheap, the mass of the community had much to spend on other things; when corn was very dear, they had very little to spend on those things. In consequence, the producers of "other things" were sometimes stimulated by a great demand, and at other times deadened by utter slackness. The labouring classes in the manufacturing districts acquired in periods of plenty a certain taste for what to them were luxuries, and in periods of scarcity were naturally soured at being deprived of them. The manufacturers were frequently induced to invest additional capital by sudden augmentations of demand, and were often ruined by its sudden cessation. It was therefore impossible that the manufacturing classes could be steady customers of the agriculturists, for their own condition was fluctuating and unsteady.

Mr Wilson also showed that if the landed interest was injured by the effects of the Corn Laws, this was of itself enough to injure the manufacturing interests. "The connection," he wrote, "between the manufacturer and the landed interest in this country is much closer than is generally admitted or believed; not only is the manufacturer dependent on the landed interest for the large portion of his goods which they immediately consume, but also for a very large portion of what he exports to the most distant countries. All commerce is, either directly or indirectly, a simple exchange of the surplus products of one country for those of another. It is therefore a first essential that we should be able to take the cotton of America, the sugar and coffee of India, the silk and teas of China, before they can take our manufactures; and if this be necessary, then must it follow that in proportion to the extent to which we can take their produce, will they be enabled to take our manufactures. Therefore, whatever portion of these products is consumed in this country by the landed interest, must to that extent enable the manufacturer to export his goods in return; and thus any causes which increase this ability on the part of the landed interest to consume, must give a corresponding additional ability to the manufacturers to export. Every pound of coffee or sugar, every ounce of tea, every article of luxury, the produce of foreign climes, whether consumed within the castles and halls of our wealthiest landowners, or in the humble cottages of our lowliest peasantry, alike represent some portion of the exports of this country. On the other hand, the dependence of the landowner is no less twofold on the manufacturer and merchant. He is not only dependent upon them for their own immediate consumption, but also for the consumption of whatever food enters into the cost price of their goods. Although the English farmer does not export his *corn* or his other produce in the exact shape and form in which he produces them, they constitute not the less on that account a distinct portion of the exports of this country, and that in the best of all possible forms. Just as much as the manufacturer exports the wool or the silk which enters into the fabrics of those materials, does he export the corn which paid for the labour of spinning and weaving them. It would be an utter impossibility that this country could consume its agricultural produce but for our extensive manufacturing population; or that the value of what would be consumed could be near its present rate. If without this aid our agricultural produce were as great as it now is, a large portion would have to seek a market in distant countries: it would then have to be exported in the exact form in which it is produced; the expenses of which being so large would reduce very greatly from its value and net price, and the landed interest would be immediately affected thereby. But, as it is, the produce of the land is exported in the condensed form of manufactured goods, at a comparatively trifling expense, which secures a high value to it here. Thus, for example, a few bales of silk or woollen goods may contain as much wheat in their value as would freight a whole ship. To this advantage the landed interest is indebted, exclusively, for the very superior value of property and produce in this country to any other; because, by our great manufacturing superiority, a market is found for our produce over the whole world, conveyed in the cheapest and most condensed form. While the Chinese, or Indians, buy our cottons, our silks, or our woollens, they buy a portion of the grain and other produce of the land of this country; and therefore the producer here, while indulging in the delicacies or luxuries of Oriental climes, may only be consuming a portion of the golden heads of wheat which had gracefully waved in his own fields at a former day. Is it not, therefore, sufficiently clear that no circumstance whatever can either improve or injure one of these interests without immediately in the same way affecting the other? The connection is so close that it is impossible to separate or distinguish them. Any circumstance which limits our commerce must limit our market for agricultural produce; and any possible circumstance which deteriorates the condition of our agriculturists must deteriorate our commerce, by limiting our imports, and consequently our exports. These are general principles, and are capable of extension to the whole world, in all places, and at all times; and the same principle as is thus shown to connect and combine the different interests of any one country, just as certainly operates in producing a similar effect between different countries; and we ardently hope, ere long, to find not only the petty jealousies between different portions of the same community entirely removed, but that all countries will learn that a free and unrestricted co-operation with each other in matters of commerce can only tend to the general benefit and welfare of all."

We do not say that these propositions were exactly discoveries of Mr Wilson. During the exciting discussion of a great public question, the most important truths which relate to it are "in the air" of the age;

many persons see them, or half-see them; and it is impossible to trace the precise parentage of any of them. But we do say that these opinions were exactly suited to the broad and practical understanding of Mr Wilson; that they were very effectively illustrated by him—more effectively probably than by any other writer; that he thought them out for himself with but little knowledge of previous theories; that they, principally, raised Free Trade from a class question to a national question; that to them, whether advocated by Mr Wilson or by others, the success of the Anti-Corn Law agitation was in a great measure owing; that whatever doubt may formerly have been felt, an ample trial has now proved them to be true.

Mr Wilson's pamphlet entitled "The Revenue; or, What should the Chancellor do?" which attracted considerable attention when it was published in 1841, is worth reading now, though dated so many years ago, for it contains an outline of the financial policy which Sir Robert Peel commenced, and which Mr Gladstone has now almost completed. This pamphlet, which is rather long (27 moderate pages), was begun as an article for the *Morning Chronicle*, but proved too long for that purpose. It was written with almost inconceivable rapidity—nearly all we believe in a single night,—though its principles and its many figures will bear a critical scrutiny even now.

In the briefest memoir of Mr Wilson it is necessary to say something of the Currency; but it will not be advisable to say very much. If however we could rely on the patience of our readers, we should say a good deal. On no subject perhaps did Mr Wilson take up a more characteristic position. He saw certain broad principles distinctly and steadily, and to these he firmly adhered, no matter what refined theories were suggested, or what the opinion of others might be.

Mr Wilson was a stern bullionist. He held that a five-pound note was a promise to pay five pounds. He answered Sir R. Peel's question, "What is a pound?" with Sir Robert's own answer. He said it was a certain specified quantity of gold metal. He held that all devices for aiding industry by issuing inconvertible notes were certainly foolish, and might perhaps be mischievous. He held that industry could only be really aided by additional *capital*—by new machines, new instruments, new raw material; that an addition to a paper *currency* was as useless to aid deficient capital, as it was to feed a hungry population.

Mr Wilson held, secondly, that the *sine qua non*, the great prerequisite to a good paper currency, was the maintenance of an adequate reserve by the issuer. He believed that a banker should look at his liabilities as a whole—the notes which he has in circulation and the deposits he has in his ledger taken together; and should retain a sufficient portion of them (say one-third) in cash, or in something equivalent to cash, in daily readiness to pay them at once. Mr Wilson considered that bankers might be trusted to keep such a reserve, as they would be ruined, sooner or later, if they did not; and if the notes issued by them were always convertible at the pleasure of the holder, he believed that the currency would never be depreciated.

He thought however that, as bank-notes must pass from hand to hand in the market, and as in practice most persons—most traders especially—must take them in payment whether they wish to do so or not, some special security might properly be required for their payment. He would have allowed any one who liked to issue bank-notes on depositing Consols to a sufficient amount—the amount, that is, of the notes issued, and an adequate per centage in addition.

Lastly, Mr Wilson believed that the bank-note circulation exercised quite a secondary and unimportant influence upon prices and upon transactions, in comparison with the auxiliary currency of cheques and credits which has indefinitely augmented during the last thirty years. So far from regarding the public as constantly ready for an unlimited supply of bank-notes, he thought that it was only in times of extreme panic, when this auxiliary currency is diminished and disturbed, that the bank-notes in the hands of the public either could or would be augmented. He believed that the public only kept in their hands as many notes as they wanted for their own convenience, and that all others were in the present day paid back to the banker immediately and necessarily.

Unfortunately, however, the currency is not discussed in England with very exact reference to abstract principles. The popular question of every thinker is, "Are you in favour of Peel's Bill, or are you against it?" And this mode of discussing the subject always placed Mr Wilson in a position of some difficulty. He concurred in the aim of Sir R. Peel, but objected to his procedure. He wished to secure the convertibility of the bank-note. He believed that the Act of 1844 indirectly induced the Bank Directors to keep more bullion than they would keep otherwise, and in so far he thought it beneficial; but he also thought that the advantages obtained by it were purchased at a needless price; that they might have been obtained much more cheaply; that the machinery of the Act aggravated every panic; that it tended to fix the attention of the public on bank-notes, and so fostered the mischievous delusion that the augmented issue of paper currency would strengthen industry; that it neglected to take account of other forms of credit which are equally important with bank-notes; that "*for one week in ten years*"—the week of panic—it created needless and intense apprehension, and so tended to cause the ruin of some solvent commercial men. In brief, though he fully believed the professed object of Sir R. Peel—the convertibility of the bank-note—to be beneficial and inestimable, he as fully believed the special means selected by him to be inconvenient and pernicious.

Opinions akin to Mr Wilson's, if not identical with them, are very commonly now entertained, both by practical men of business and by professed economists. The younger school of thinkers who have had before them the working of the Act of 1844 and the events of 1847 and 1857, and are not committed by any of the older controversies, are especially inclined to them. Yet from peculiar causes they have not been so popular as Mr Wilson's other opinions. His views of finance and of the effect of Free Trade, which were half heresies when he announced them, have now become almost axioms. But the truth of his currency theory is still warmly controverted. The reason is this:—Sir R. Peel's Act is a sort of compromise which is suited to the English people. It was probably intended by its author as a preliminary step; it undoubtedly suits no strict theory; it certainly has great marks of incompleteness; but "it works tolerably well"; if it produces evils at a crisis, "crises come but seldom"; in ordinary times commerce "goes on very fairly." The pressure of practical evil upon the English people has never yet been so great as to induce them to face the unpleasant difficulties of the abstract Currency question. Mr Wilson's opinions have, therefore, never been considered by practical men for a practical object, and it is only when so considered that any opinions of his can be duly estimated. Their essentially moderate character, too, is unfavourable to them—not, indeed, among careful inquirers, but in the hubbub of public controversy. The only great party which has as yet attacked Sir Robert Peel's Bill is that which desires an extensive issue of inconvertible currency; but to them Mr Wilson was as much opposed as Sir Robert Peel himself. The two watchwords of the controversy are "caution" and "expansion": the advocates of the Act of 1844

have seized on the former, the Birmingham school on the latter; the intermediate, and, as we think, juster opinions of Mr Wilson have had no party cry to aid them, and they have not as yet therefore obtained the practical influence which he never ceased to anticipate and to hope for them. No more need be said upon the currency question,—perhaps we have already said too much; but to those who knew Mr Wilson well, no subject is more connected with his memory: he was so fond of expounding it, that its very technicalities are, in the minds of some, associated with his voice and image.

But it was not by mere correctness of economical speculation that Mr Wilson was to rise to eminence. A very accurate knowledge of even the more practical aspects of Economical Science is not of itself a productive source of income. By the foundation of this journal Mr Wilson secured for himself during the rest of his life competence and comfort, but it was not solely or simply by writing good Political Economy in it. The organisation of a first-rate commercial paper in 1843 required a great inventiveness and also a great discretion. Nothing of the kind then existed; it was not known what the public most wished to know on business interests; the best shape of communicating information had to be invented in detail. The labour of creating such a paper and of administering it during its early stages is very great; and might well deter most men even of superior ability from attempting it. At this period of his life Mr Wilson used to superintend the whole of the Economist; to write all the important leaders, nearly all of the unimportant ones; to make himself master of every commercial question as it arose; to give practical details as to the practical aspects of it; to be on the watch for every kind of new commercial information; to spend hours in adapting it to the daily wants of commercial men. He often worked till far into the morning, and impressed all about him with wonder at the anxiety, labour, and exhaustion he was able to undergo. As has been stated, for some months after the commencement of this paper he was still engaged in his former business; and after he relinquished that, he used to write the City article and also leaders for the *Morning Chronicle*, at the very time that he was doing on this paper far more than most men would have had endurance of mind or strength of body for. Long afterwards he used to speak of this period as far more exhausting than the most exhausting part of a laborious public life. "Our public men," he once said, "do not know what anxiety means; they have never known what it is to have their own position dependent on their own exertions." In 1843, and for some time afterwards, he had himself to bear extreme labour and great anxiety together; and even his iron frame was worn and tried by the conjunction.

Within seven years from the foundation of the Economist, Mr Wilson dealt effectively and thoroughly with three first-rate subjects,—the railway mania, the famine in Ireland, and the panic of 1847, in addition to the entire question of Free Trade, which was naturally the main topic of economical teaching in those years. On all these three topics he explained somewhat original opinions, which were novelties, if not paradoxes then, though they are very generally believed now. To his writings on the railway mania he was especially fond of recurring, since he believed that by his warnings—warnings very effectively brought out and very constantly reiterated—he had "saved several men their fortunes" at that time.

The success of this paper, and the advantage which the proprietor of it would derive from a first-hand acquaintance with political life, naturally led him to think of gaining a seat in Parliament, and an accidental conversation at Lord Radnor's table fixed his attention on the borough of Westbury. After receiving a requisition, he visited the place, explained his political sentiments at much length "from an old cart," and believed that he saw sufficient chances of success to induce him to take a house there. He showed considerable abilities in electioneering, and a close observer once said of him, "Mr Wilson may or may not be the best Political Economist in England, but depend upon it he is the *only* Political Economist who would ever come in for the borough of Westbury." Though nominally a borough, the constituency is half a rural one, much under the influence of certain Conservative squires. The Liberal party were in 1847 only endeavouring to emancipate themselves from a yoke to which they have now again succumbed. Except for Mr Wilson's constant watchfulness, his animated geniality, his residence on the spot, his knowledge of every voter by sight, the Liberal party might never have been successful there. A certain expansive frankness of manner and a wonderful lucidity in explaining his opinions almost to any one, gave Mr Wilson great advantages as a popular candidate, and it was very remarkable to find these qualities connected with a strong taste for treating very dry subjects upon professedly abstract principles. So peculiar a combination had the success which it merited. In the summer of 1847 he was elected to serve in Parliament for Westbury.

Mr Wilson made his first speech in the House of Commons on the motion for a Committee to inquire into the Commercial Distress at that time prevalent. And it was considered an act of intellectual boldness for a new member to explain his opinions on so difficult a subject as the currency, especially as they were definitely opposed to a measure supported by such overwhelming Parliamentary authority as the Act of 1844 then was. Judging from the report of the speech in "Hansard," and from the recollections of some who heard it, the speech was a successful one. It is very clear and distinct, and its tone is very emphatic, without ever ceasing to be considerate and candid. It contains a sufficient account of Mr Wilson's tenets on the currency—so good an account, indeed, that when he read it ten years later, in the panic of 1857, he acknowledged that he did not think he could add a word to it. At the time, however, the test of its Parliamentary success was not the absolute correctness of its abstract principles, but, to use appropriate and technical language, "its getting a rise out of Peel." Sir Robert had used some certainly inconclusive arguments in favour of his favourite measure, and Mr Wilson made that inconclusiveness so very clear that he thought it necessary to rise "and explain," which, on such a subject, was deemed at the moment a great triumph for a first speech.

As might be expected from so favourable a commencement, Mr Wilson soon established a Parliamentary reputation. He was not a formal orator, and did not profess to be so. But he had great powers of exposition, singular command of telling details upon his own subjects, a very pleasing voice, a grave but by no means inanimate manner—qualities which are amply sufficient to gain the respectful attention of the House of Commons. And Mr Wilson did gain it. But speaking is but half, and in the great majority of cases by far the smaller half, of the duties of a member of Parliament. Mr Wilson was fond of quoting a saying of Sir R. Peel's, "That the way to get on in the House of Commons was to take a place and sit there." He adopted this rule himself, was constant in his attendance at the House, a good listener to other men, and always ready to take trouble with troublesome matters. These plain and business-like qualities, added to his acknowledged ability and admitted acquaintance with a large class of subjects upon which knowledge is rare, gave Mr Wilson a substantial influence in the House of Commons in an unusually short time. The Corn Laws had been repealed, the pitched battle of Free Trade had been fought and won, but much yet

remained to be done in carrying out its principles with effective precision, in applying them to articles other than corn, in exposing the fallacies still abundantly current, and in answering the exceptional case which every trade in succession set up for an exceptional protection. These were painful and complex matters of detail, wearisome to very many persons, and rewarding with no *éclat* those who took the trouble to master and explain them. But Mr Wilson shrank from no detail. For several years before he had a seat in the House, he had been used to explain such topics in countless conversations with the most prominent Free-traders and in the Economist. He now did so in the House of Commons, and his influence correspondingly increased. He was able to do an important work better than any one else could do it, and, in English public life, real work rightly done at the right season scarcely ever fails to meet with a real reward.

That Mr Wilson early acquired considerable Parliamentary reputation is evinced by the best of all proofs. He was offered office before he had been six months in the House of Commons, though he had, as the preceding sketch will have made evident, no aristocratic connections—though he was believed to be a poorer man than he really was—though writing political articles for newspapers has never been in England the sure introduction to political power which it formerly was in France—though, on the contrary, it has in general been found a hindrance. In a case like Mr Wilson's, the prize of office was a sure proof of evident prowess in the Parliamentary arena.

The office which was offered to Mr Wilson was one of the Secretaryships of the Board of Control. Mr Wilson related at Hawick his reluctance to accept it, and his reason. Never having given any special attention to Indian topics, he thought it would be absurd and ridiculous in him to accept an office which seemed to require much special knowledge. But Lord John Russell, with "that knowledge of public affairs which long experience ensures," at once explained to him that a statesman, under our Parliamentary system, must be prepared to serve the Queen "whenever he may be called on"; and accordingly that he must be ready to take *any* office which he can fill, without at all considering whether it is that which he can *best* fill. After some deliberation, Mr Wilson acknowledged the wisdom of this advice, and accepted the office offered him. Long afterwards, in the speech at Hawick to which we have alluded, he said that without the preliminary knowledge of India which he acquired at the Board of Control, he would never have been able to undertake the regulation of her finances.

When once installed in his office, he devoted himself to it with his usual unwearied industry. And at least on one occasion he had to deal with a congenial topic. The introduction of railways into India was opposed on many grounds, most of which are now forgotten,—such as "the effect upon the native mind," "the impossibility of inducing the Hindoos to travel in that manner," and the like; and more serious difficulties occurred in considering the exact position which the Government should assume with regard to such great undertakings in such singular circumstances,—the necessity on the one hand, in an Asiatic country where the State is the sole motive power, of the Government's doing something,—and the danger on the other hand of interfering with private enterprise, by its doing, or attempting to do, too much. Mr Wilson applied himself vigorously to all these difficulties; he exercised the whole of his personal influence, and the whole of that which was given to him by his situation, in dissipating the fanciful obstacles which were alleged to be latent in the unknown tendencies of the Oriental mind; while he certainly elaborated,—and he *believed* that he originally suggested,—the peculiar form of State guarantee upon the faith of which so many millions of English capital have been sent to develop the industry of India.

Besides discharging the duties of his office, Mr Wilson represented the Government of the day on several Committees connected with his peculiar topics, and especially on one which fully investigated the Sugar question. Of the latter, indeed, he became so fully master that some people fancied he must have been in the trade; so complete was the familiarity which he displayed with "brown muscovado," "white clayed," and all other technical terms which are generally inscrutably puzzling to Parliamentary statesmen. On a Parliamentary Committee Mr Wilson appeared to great advantage. Though sufficiently confident of the truth of his own opinions, he had essentially a fair mind; he always had the greatest confidence that if the facts were probed the correctness of what he believed would be established, and, *therefore*, he was always ready to probe the facts to the bottom. He was likewise a great master of the Socratic art of inquiry; he was able to frame a series of consecutive questions which gradually brought an unwilling or a hostile witness to conclusions at which he by no means wished to arrive. His examination-in-chief, too, was as good as his cross-examination, and the animated interest which he evinced in the subject relieved the dreariness which a rehearsed extraction of premeditated answers commonly involves. The examination of Lord Overstone before the Committee of 1848 on Commercial Distress, that of Mr Weguelin before the Committee on the Bank Acts in 1857, and several of the examinations before the Committee on Life Insurance, of which he was the Chairman, may be consulted as models in their respective kinds. And it should be stated that no man could be less overbearing in examination or cross-examination; much was often extracted from a witness which he did not wish to state, but it was always extracted fairly, quietly, and by seemingly inevitable sequence.

Mr Wilson continued at the Board of Control till the resignation of Lord John Russell's Cabinet in the spring of 1852. He took part in the opposition of the Liberal party to Lord Derby's Government, and was very deeply interested in the final settlement of the Free Trade question which was effected by the accession of the Protectionist party to office. After a very severe contest he was re-elected for Westbury in July, 1852, and on the formation of the Aberdeen Government he accepted the office of Financial Secretary to the Treasury, which he continued to hold for five years, until the dissolution of Lord Palmerston's administration in the spring of 1857, and upon his efficiency in which his remarkable reputation as an official administrator was mainly based.

The Financial Secretaryship of the Treasury is by no means one of the most conspicuous offices in the Government, and but few persons who have not observed political life closely are at all aware either of its difficulty or of its importance. The office is, indeed, a curious example of the half grotesque way in which the abstract theory of our historical constitution contrasts with its practical working. In the theory of the constitution—a theory which may still be found in popular compendiums—there is an officer called the Lord High Treasurer, who is to advise the Crown and be responsible to the country for all public monies. In practice, there is no such functionary: by law his office is "in commission." Certain Lords Commissioners are supposed to form a Board at which financial subjects are discussed, and which is responsible for their due administration. In practice, there is no such discussion and no such responsibility. The functions of the Junior Lords of the Treasury, though not entirely nominal, are but slight. The practical administration of our expenditure is vested in the First Lord of the Treasury, the Chancellor of the

Exchequer, and the Financial Secretary of the Treasury. And of these three the constitutional rule is, that the First Lord of the Treasury is only officially responsible for decisions in detail when he chooses to interfere in those decisions. Accordingly, when a First Lord, as was the case with Sir R. Peel, takes a great interest in financial questions, the Chancellor of the Exchequer does the usual work of the Secretary of the Treasury, and the Secretary of the Treasury has in comparison nothing to do. But when, as was the case in the Governments of Lord Aberdeen and Lord Palmerston, the Prime Minister takes no special interest in Finance, the Chancellor of the Exchequer is very fully employed in the transaction of his own proper business, and an enormous mass of work, some of it of extreme importance, falls to the Secretary of the Treasury. Of late years, the growth of the miscellaneous civil expenditure of the country has greatly augmented that work—great as it was before. In general, it may be said that the whole of the financial detail of our national expenditure is more or less controlled by the Secretary of the Treasury; that much of it is very closely controlled by him; and that he has vast powers of practical discretion if only he be a man of ability, industry, and courage.

For such an office as this Mr Wilson had very peculiar qualifications. He was perfectly sure to be right in a plain case; and by far the larger part of the ordinary business of the Government, as of individuals, consists of plain cases. A man who is thoroughly sure to decide effectually and correctly the entire mass of easy obvious cases, is a safer master of practical life than one eminently skilled in difficult cases, but deficient in the more rudimentary qualification. Nor is the power of certainly deciding plain cases rightly, by any means very common, especially among very intellectual men. A certain taint of subtlety, a certain tendency to be wise above the case in hand, mars the practical efficiency of many men whose conversation and whose powers would induce us to expect that they would be very efficient. Mr Wilson had not a particle of these defects. He struck off each case with a certain sledge-hammer efficiency, and every plain case at least with infallible accuracy.

It might seem overstrained eulogy—a eulogy which he would not have wished—to claim for Mr Wilson an equally infallible power of deciding complicated cases. As to such cases there will always be a doubt. Plain matters speak for themselves: they do not require a dissertation to elucidate them: every man of business, as soon as he hears the right decision of them, knows that it is the right decision. But with more refined matters it is not so; as to points involving an abstract theory, like that of the Currency, there will and must be differences of judgment to the end of time. We would not, therefore, whatever may be our own opinion, claim for Mr Wilson as infallible a power of deciding difficult questions as he certainly possessed of deciding plain questions. But we do claim for him even in such matters the greatest secondary excellence, if, indeed, a secondary excellence it be. Mr Wilson was perfectly certain to be *intelligible in the most difficult case*. Whether he did right or did wrong, must, as we have said, be from the nature of the subject-matter very arguable. But *what* he did and *why* he did it, was never in doubt for a moment. The archives of the Treasury contain countless minutes from his pen, most of them written with what most men would call rapidity, just while the matter was waiting for decision, and on all sorts of subjects, many of them very complicated ones,—yet it may be doubted whether any one of those minutes contains a single sentence not thoroughly and conspicuously clear. The same excellence which has been shown in countless articles in this journal appears in his business-like documents. Wherever his leading articles were written and under whatever circumstances,—and some of the most elaborate of them were written under rather strange circumstances (for he could catch up a pen and begin to write on the most involved topic, at any time, in any place, and, as a casual observer would think, without any premeditation),—but wherever and however these articles might be written, it may be safely asserted that they do not contain a sentence which a man of business need read twice over, or which he would not find easily and certainly intelligible. At the Treasury it was the same. However complicated or involved the matter to be decided might be,—however much it might be loaded with detail or perplexed by previous controversy,—Mr Wilson never failed to make immediately clear the exact opinion he formed upon it, the exact grounds upon which he formed it, and the exact course of action which he thought should be adopted upon it. Many persons well acquainted with practical life will be disposed to doubt whether extreme accuracy of decision is not almost a secondary merit as compared with a perfect intelligibility. In many cases it may be better to have a decision which every one can understand, though with some percentage of error, than an elaborately accurate decision of which the grounds and reasons are not easily grasped, and a plan of action which, from its refined complexity, is an inevitable mystery to the greater number of practical persons. But, putting aside this abstract discussion, we say without fear of contradiction or of doubt, that Mr Wilson added to his almost infallible power of deciding plain cases, an infallible certainty of being entirely intelligible in complicated cases. Men of business will be able to imagine the administrative capacity certain to be produced by the union of extreme excellence in both qualities.

One subsidiary faculty that Mr Wilson possessed, which was very useful to him in the multifarious business of the Treasury, was an extraordinary memory. On his own subjects and upon transactions in which he had taken a decisive part, he seemed to recollect anything and everything. He was able to answer questions as to business transacted at the Treasury after the lapse of months and even of years without referring to the papers, and with a perfect certainty of substantial accuracy. He would say, without the slightest effort and without the slightest idea that he was doing anything extraordinary: "Such and such a person came to me at the Treasury, and said so and so, and this is what I said to him." And it is quite possible that he might remember the precise sums of money which were the subject of conversation. A more useful memory for the purposes of life was perhaps never possessed by any one. In the case of great literary memories, such as that of Lord Macaulay and of others, the fortunate possessor has a continued source of pleasurable and constantly recurring recollections; he has a full mind constantly occupied with its own contents, recurring to its long loved passages from its favourite authors constantly and habitually. But Mr Wilson never recurred to the transactions in which he had been engaged except when he was asked about them; he lived as little in the past perhaps as is possible for an intellectual person; but the moment the spring was touched by a question or by some external necessity, all the details of the past transaction started into his memory completely, vividly, and perfectly. He had thus the advantage of always remembering his business, and also the advantage of never being burdened by it. Very few persons can ever have had in equal measure the two merits of a fresh judgment and a full mind.

Mr Wilson's memory was likewise assisted by a very even judgment. It was easier to him to remember what he had done, because, if he had to do the same thing again, he would be sure to do it in precisely the same way.

He was not an intolerant person, but the qualities he tolerated least easily were flightiness and inconsistency of purpose. He had furnished his mind, so to say, with fixed principles, and he hated the notion of a mind which was unfurnished.

All these mental qualities taken together go far to make up the complete idea of a perfect administrator of miscellaneous financial business, such as that of the English Treasury now is. And Mr Wilson had the physical qualities also. An iron constitution which feared no labour, and was very rarely incapacitated even for an hour by any illness, enabled him to accomplish with ease and unconsciously an amount of work which few men would not have shrunk from. In the country, where his habits were necessarily more obvious, he habitually spent the whole day from eleven till eight, with some slight interval for a short ride in the middle of the day, over his Treasury bag; and as such was his notion of a holiday, it may be easily conceived that in London, when he had still more to do in a morning, and had to spend almost every evening in the House of Commons, his work was greater than an ordinary constitution could have borne. And it was work of a rather peculiar kind. Some men of routine habits spend many hours over their work, but do not labour very intensely at one time; other men of more excitable natures work impulsively, and clear off every thing they do by eager efforts in a short time. But Mr Wilson in some sense did both. Although his hours of labour were so very protracted, yet if a casual observer happened to enter his library at any moment, he would find him with his blind down to exclude all objects of external interest, his brow working eagerly, his eye fixed intently on the figures before him, and, very likely, his rapid pen passing fluently over the paper. He had all the labour of the chronic worker, and all the labour of the impulsive worker too. And those admitted to his intimacy used to wonder that he was never tired. He came out of his library in an evening more ready for vigorous conversation—more alive to all subjects of daily interest—more quick to gain new information—more ready to expound complicated topics, than others who had only passed an easy day of idleness or ordinary exertion.

By the aid of this varied combination of powers, Mr Wilson was able to grapple with the miscellaneous financial business of the country with very unusual efficiency. Most men would have found the office work of the Secretary of the Treasury quite enough, but he was always ready rather to take away labour and responsibilities from other departments than to throw off any upon them. Nor was his efficiency confined to the labours of his office. The Financial Secretary of the Treasury has a large part of the financial business of the House of Commons under his control, and is responsible for its accurate arrangement. The passing a measure through the House of Commons is a matter of detail; and in the case of the financial measures of the Government, a large part of this —the dullest part, and the most unenvied—falls to the Secretary of the Treasury. He is expected to be the right hand of the Chancellor of the Exchequer in all the most wearisome part of the financial business of the House of Commons; and we have the best authority for stating that, under two Chancellors of the Exchequer very different from one another in many respects, Mr Wilson performed this part of his duties with singular efficiency, zeal, and judgment.

The Financial Secretary of the Treasury is likewise expected to answer all questions asked in the House as to the civil estimates—a most miscellaneous collection of figures, as any one may satisfy himself by glancing at them. Mr Wilson's astonishing memory and great power of lucid exposition enabled him to fulfil this part of his duty with very remarkable efficiency. He gave the dates and the figures without any note, and his exposition was uniformly simple, emphatic, and intelligible even on the most complicated subjects. The great rule, he used to say, was to answer exactly the exact question: if you attempted an elaborate exposition, collateral issues were necessarily raised, a debate ensued, and the time of the House was lost.

Mr Wilson's mercantile knowledge and mercantile sympathies were found to be of much use in the consolidation of the Customs in 1853, and he took great interest in settling a scheme for the payment of the duties in cheques instead of bank-notes, by which the circulation has been largely economised and traders greatly benefited. During the autumn of 1857, his long study of the currency question, and his first-hand conversancy with the business of the City, were valuable aids to the Administration of the day in the anxious responsibilities and rapidly shifting scenes of an extreme commercial crisis. It would be impossible to notice the number of measures in which he took part as Secretary of the Treasury, and equally impossible to trace his precise share in them. That office ensures to its holder substantial power, but can rarely give him legislative fame.

On two occasions during his tenure of office at the Treasury, Mr Wilson was offered a different post. In the autumn of 1856 he was offered the Chairmanship of Inland Revenue, a permanent office of considerable value then vacant, which he declined because he did not consider the income necessary, and because (what some people would think odd) it did not afford sufficient occupation. It was a "good pillow," he said, "but he did not wish to lie down." The second office offered him was the Vice-Presidency of the Board of Trade in 1855, which would have been a step to him in official rank, but which would have entailed a new election, and he did not feel quite secure that the electors of Westbury would again return him. He did not, however, by any means wish for the change, as the Vice-Presidency of the Board of Trade, though nominally superior, is in real power far inferior to the Secretaryship of the Treasury.

In the general election of 1857, Mr Wilson was returned for Devonport, for which place he continued to sit till his departure for India. He went out of office on the dissolution of Lord Palmerston's Administration in the spring of 1858, and took an active part in the Liberal opposition to Lord Derby's Government, though it may be remarked that he carefully abstained from using the opportunities afforded him by his long experience at the Treasury, of harassing his less experienced successors in financial office by needless and petty difficulties.

On the return of the Liberal party to power, Mr Wilson was asked to resume his post at the Treasury, but he declined, as, after five years of laborious service, he wished to have an office of which the details were less absorbing. He accepted, however, the Vice-Presidency of the Board of Trade—an office which is not in itself attractive, but which gives its possessor a sort of claim to be President of the Board at the next vacancy. The office of President is frequently accompanied by a seat in the Cabinet, and Mr Wilson's reputation on all subjects connected with trade was so firmly established that in his case it would have been practically impossible to pass him over, even if it had been wished. He had, however, secured so firm a position in official circles by his real efficiency, that the dispensers of patronage were, as he believed, likely to give him whatever he desired as soon as the exigencies of party enabled them to do so.

He had not been long in office before he had good reason for thinking that he would be offered by the Government the office of Financial Member of the Council of India under very peculiar circumstances. There had never before been such an officer. One

member of Council had since 1833 been always sent out from England, but he had always been a lawyer, and his functions were those of a jurist and a regulative administrator, not those of a financier. The mutiny of the Sepoys in 1857 had, however, left behind it a deficit with which the financiers of India did not *seem* to be able to cope, and which a cumbrous financial system did not give them the best means of vanquishing. There was a general impression that some one with an English training and English habits of business would have a better chance of overcoming the most pressing difficulty of India than any one on the spot. And there was an equally general impression that if any one were to be sent from England to India with such an object, Mr Wilson was the right person. He united high financial reputation, considerable knowledge of India acquired at the Board of Control, tried habits of business, long experience at the English Treasury, to the sagacious readiness in dealing with new situations which self-made men commonly have, but which is commonly wanting in others.

On personal grounds Mr Wilson was disinclined to accept the office. He was on the threshold of the Cabinet here; he was entitled by his long tenure of office at the Treasury to a pension which would merge in the salary of Indian Councillor; the emoluments of the latter office were not necessary to him; his life was very heavily insured for the benefit of his family; though he had never during his tenure of office at the Treasury been connected directly or indirectly with any kind of commercial undertaking (this journal alone excepted), some investments which he made in land and securities had been very fortunate; since the year 1844 everything of a pecuniary kind in which he had been concerned had not only prospered, but remarkably prospered; he felt himself sufficiently rich to pursue the career of prosperous usefulness and satisfied ambition that seemed to be before him here. There was no consideration of private interest which could induce him to undertake anxious and dangerous duties in India; he even ran some pecuniary risk in leaving this country, as it was possible that in the vicissitudes of newspaper property this journal might again need the attention of its proprietor and founder. On public grounds, however, he believed that it was his duty to accept the office; he took a keen interest in Indian finance; believed that the difficulties of it might be conquered, and thought that in even *attempting* to conquer them he would be doing the greatest and most lasting public service that it was in *his* power to accomplish.

He accordingly accepted the office of Financial Member of the Council of India, and proceeded to make somewhat melancholy arrangements for leaving this country. He broke up his establishment here; bade farewell to his constituents at Devonport and to the inhabitants of his native place; attended some influential public meetings in towns deeply interested in the commerce of India; and on the 20th of October, 1859, left England, as it proved for ever.

Of Mr Wilson's policy in India it would not be proper to give more than a very brief sketch here. That policy is still fresh in the memory of the public; it has been very frequently explained and discussed in the Economist; it is still being tried, and, though he was fully persuaded of the expediency of his measures, he would not have wished for too warm a eulogy of them while they are as yet untested by the event. In almost the last letter which the present writer received from him, there was a sort of reprimand for permitting this journal to draw too great an attention to his plans, and to ascribe the merit of them too exclusively to him, and too little to the Government of which he was a member.

On his arrival in India he found that the Governor-General was on a tour in the Upper Provinces of India, and before doing any business of importance at Calcutta he travelled thither. This journey he thought very advantageous, because it gave him a great insight into the nature of the country, and enabled him to consult the most experienced revenue officers of many large districts on their respective resources, and on the safest mode of making those resources available to the public. He was much struck with the capabilities of the country, and wrote to England almost in so many words "that it was a fine country to *tax*." On the other hand, however, he was well aware of the difficulty of his task. The only two possible modes of taxation are direct and indirect, and in the case of India there is a difficulty in adopting either. If we select indirect taxation and impose duties on consumable commodities, the natives of India meet us by declining to consume. Their wants are few, and they will forego most of them if a tax can be evaded thereby. On the other hand, if we adopt in India a direct tax on property or income, there is great difficulty in finding out what each man's property or income is. In England we trust each person to tell us the amount of his income, but even here the results are not wholly satisfactory; and it would be absurd to fancy that we can place as much reliance upon the veracity of Orientals as upon that of Englishmen.

These difficulties, however, Mr Wilson was prepared to meet. On the 18th February, 1860, he proposed his Budget to the Legislative Council at Calcutta, and the reception given to it by all classes was remarkably favourable. He announced, indeed, a scheme of heavy taxation, but the Indian public had been living for a considerable time under a sentence of indefinite taxation, and they were glad to know the worst. Anything distinct was better than vague suspense, and, as usual, Mr Wilson contrived to make his meaning *very* distinct. His bearing also exercised a great influence over the Anglo-Indian public. In England he had been remarkable among official men for his constant animation and thorough naturalness of manner: in his office he was as much himself as at a dinner table or in the House of Commons: he had no tinge of supercilious politeness or artificial blandness. In any new scene of action—especially in such a scene as British India—these qualities were sure to tell beneficially. Plain directness and emphatic simplicity were the external qualities most likely to be useful at Calcutta, and these were Mr Wilson's most remarkable qualities.

The principal feature of Mr Wilson's Budget was the Income Tax, which he avowedly framed after the English fashion. It is true that but little reliance can, perhaps, be placed on the statements of Orientals as to their wealth. It is very possible that the complicated machinery of forms and notices which is in use here may not be applicable in India. All this Mr Wilson well knew. But he thought that our Indian subjects should have an opportunity of stating their income before they were taxed upon it. If they should state it untruly, or should decline to state it, it might be necessary to tax them arbitrarily. But he did not think it would be decent—that it would be civilised—to begin with an arbitrary assessment. By the Income Tax Act which he framed, it is enacted that other modes may be substituted if in any instance the English mode of assessment should prove inapplicable. In other words, if our Oriental fellow-subjects will not tell us the truth when they are asked, we must tax them as best we can, and they cannot justly complain of unfairness and inequality. *We* would have been mathematically just, if *they* had given us the means.

The reception of Mr Wilson's Budget was universally favourable until the publication of the minute of Sir C. Trevelyan, which, as was inevitable, produced a serious reaction. Heavy taxation can never be very pleasant, and in the Presidency of Madras Sir Charles gave the sanction of the Government—of the highest

authority the people saw—to the hope that they would not be taxed. The prompt recall of Sir Charles, however, did much to convince the natives of the firm determination of the English Government, and Mr Wilson hoped that the ordeal of criticism through which his measures had to pass would ultimately be favourable to them. It certainly secured them from the accusation of being prepared in haste, but it purchased this benefit at the loss to the public of much precious time, and to Mr Wilson of precious health. Of the substance of this minute it is sufficient to say that its fundamental theory that additional taxation of any sort was unnecessary in India, has scarcely been believed by any one except its author. Almost every one has deemed it too satisfactory to be true.

On another point Mr Wilson's Budget has been criticised in England, though not in India. It has been considered to be a protective Budget. The mistake has arisen from not attending to what that Budget is. The changes made by Mr Wilson in the import duties were two. "The first was a reduction from twenty to ten per cent. upon a long list of articles, including haberdashery, millinery, and hosiery, all part of the cotton trade; the second was an increase in the duty upon cotton yarn from five to ten per cent., thus creating a uniform tariff of ten per cent."* Of these two, it is plain the reduction from twenty per cent. to ten was not a change that would operate as a protection to Indian industry; and the increase of the duty on yarn has a contrary tendency. Yarn is an earlier, cloth a later, stage of manufacture, and in Mr Wilson's own words, "it is a low duty on yarn and a high duty on cloth that encourages native weaving." For the effect of the general system of high Customs duties in India Mr Wilson is not responsible, but his predecessors. What *he* did has no protective tendency.

If the Income Tax should, as may be fairly hoped, become a permanent part of the financial system of India, it will serve for a considerable period to keep Mr Wilson's name alive there. So efficient an expedient must always attract the notice of the public, and must in some degree preserve the remembrance of the Minister by whom it was proposed.

Mr Wilson, however, undertook two other measures of very great importance. One of these has been frequently described as the introduction into India of the English system of public accounts. But it would be more truly described as the introduction of a rational system of public accounts. There are three natural steps in national finance, which are certainly clearly marked in our English system, but which have a necessary existence independent of that recognition. These three are—first, the estimate of future expenditure; secondly, what we call the Budget, that is the official calculation of the income by which the coming expenditure is to be defrayed; thirdly, the audit which shows what the expenditure has been and how it has been met. The system of finance which Mr Wilson found in India neglected these fundamental distinctions. There were no satisfactory estimates of future expenditure, and no satisfactory calculation of future income. In consequence, the calculations of the official departments have been wrong by millions sterling, and English statesmen have felt great difficulty not only in saying how the deficit was to be removed, but likewise in ascertaining what the amount of the deficit was. At the time of his death Mr Wilson was eagerly occupied in endeavouring to introduce a better system.

Mr Wilson will likewise be remembered as the first Minister who endeavoured to introduce into India a Government paper currency. On the 3rd March, 1860, he introduced into the Legislative Council an elaborate plan for this purpose, which, with a slight modification by Sir C. Wood—curious in the theory of the currency, but practically not very important—will speedily, it is probable, be the fundamental currency law—the "Peel's Act" of British India.

The exact mode in which Mr Wilson regarded these great objects, will perhaps be better explained by two extracts from his latest letters than by any other means. On the 4th of July he wrote to a friend:—

"Firmness and justice are the only policy for India;—no vacillation, or you are gone. They like to be governed; and respect an iron hand, if it be but equal and just. I have I think more confidence than ever that the taxes will be established and collected, and without disturbance. But the task is still an enormous one. I must retrench yet at least 3½ millions, and get the same sum from my *new* taxes to make both ends meet. I am putting the screw on very strongly, but rather by an improved policy in army and police than in reductions of salaries and establishments, which cannot be made. I have set myself *five* great points of policy to introduce and carry out.

"1. To extend a system of sound taxation to the great trading classes who hitherto have been exempted, though chiefly benefited by our enormously increased civil expenditure.

"2. To establish a paper currency.

"3. To reform and remodel our financial system, by a plan of annual budgets and estimates, with a Pay Department to check issues, and keep them within the authorised limits,—and an effective audit.

"4. A great police system of semi-military organisation, but usually of purely civil application, which, dear though it be, will be cheaper by half a million than our present wretched and expensive system,—and by which we shall be able to reduce our native army to at least one-third—and by which alone we can utilise the natives as an arm of defence without the danger of congregating idle organised masses.

"5. Public works and roads, with a view to increased production of cotton, flax, wool, and European raw materials.

"The four first I have made great progress in: the latter must follow. But you will call it "a large order." However, you have no idea of the increased capacity of the mind for undertaking a special service of this kind when removed to a new scene of action, and when one throws off all the cares of engagements less or more trivial by which one is surrounded in ordinary life, and throws one's whole soul into such a special service, and particularly when one feels assured of having the power to carry it out. I cannot tell you with what ease one determines the largest and gravest question here compared with in England; and I am certain that the more one can exercise real power, there is by far the greater tendency to moderation, care, and prudence."

In a second letter, dated July 19, he wrote to the same friend from Barrackpore:—

"The Indian Exchequer is a huge machine. The English Treasury is nothing to it for complexity, diversity, and remoteness of the points of action. Our great enemies are time and distance; and with all our frontier territories there is scarcely a day passes that we have not an account of some row or inroad. It is a most unwieldy Empire to be governed on the principle of forcing civilisation at every point of it. One day it is the frontier of Scinde and a quarrel with our native chiefs which our Resident must check: another, it is an intrigue between Herat and Cabul, with a report of Russian forces in the background: the next, there is a raid upon our Punjab frontiers to be chastised: then come some accounts of coolness, or misunderstanding, or unreasonable demands from our ally in Nepaul: then follow some inroads from the savage tribes which inhabit the mountains to the rear of Assam and up the

* Economist of Sept. 8th, 1860, p. 977.

Burrampootra: then we have reported brawls in Burmah and Pegu, and disputes among the hill tribes whose relations to the British and the Burmah Governments are ill defined: then we have Central India, with our loyal chiefs Scindiah and Holkar, independent princes with most turbulent populations, which could not be kept in order a day without the presence of British troops and of the Governor-General's Agent. Besides all these, we have among ourselves a thousand questions of internal administration, rendered more difficult by the ill-defined relations between the Supreme and the Subordinate Governments—the latter always striving to encroach, the former to hold its own. Hence, questions do not come before us simply on their merits, but often as involving these doubtful rights. Then we have Courts of Justice to reform, as well as all other institutions of a domestic kind not to reform alone, but to extend to new territories. Then we have a deficit of 7,000,000*l.*, and had a Government teaching the people that all could be done without new taxes. But unfortunately all, except the taxes, are a present certainty—*they* are a future contingency. What will they yield? I have no precise knowledge. I think from three to four millions a year when in full bloom:—this financial year not more than a million.

"I have now got a Military Finance Commission in full swing: a Civil Finance Commission also going: I am reorganising the Finance, Pay, and Accountant-General's Department, in order to get all the advantage of the English system of estimates, Pay-Office and Audit:—and this with as little disturbance of existing plans as possible. The latter is a point I have especially aimed at. On the whole, and almost without an exception, I have willing allies in all the existing offices. No attempt that I see is anywhere made to thwart or impede."

"You can well understand, then, how full my hands are, if to all these you add the new currency arrangements, you will not then wonder that my health has rendered it necessary to come down here for a day or two to get some fresh air."

It will be observed that in the last extract Mr Wilson alludes to his impaired health. For some time after his arrival in India he seemed scarcely to feel the climate. He certainly did not feel it as much as might have been anticipated. He worked extremely hard; scarcely wrote a private letter, but devoted the whole of his great energies to the business around him. His letters for a considerable time abound with such expressions as "Notwithstanding all my hard work my health is excellent." From the commencement of the rainy season at Calcutta, however, he ceased to be equally well, his state began to arouse the apprehensions of experienced observers, and he was warned that he should retire for a short time to a better climate. He would not, however, do so until his financial measures had advanced sufficiently far for him to leave them. His position was a very peculiar one. In general, if one administrator leaves his post, another is found to fill it up. But Mr Wilson was a unique man at Calcutta. He was sent there because he had certain special qualifications which no one there possessed; and, accordingly, he had no one to rely on in his peculiar functions save himself. His presence on the spot was likewise very important. The administration of a department can be frequently transacted by letter, but the organisation of new departments and new schemes requires the unremitting attention of the organiser—the impulse of his energy. The interest, too, which Mr Wilson took in public business was exceptionally great, and no one who knew him well would suppose that *he* would leave Calcutta while necessary work, or what he deemed so, was to be done there.

Nor was labour the sole trial to which his constitution was exposed. The success of measures so extensive as his, must ever be a matter of anxious doubt until the event decides; and in his case there were some momentary considerations to aggravate that anxiety. There was no experience of such taxation as he had proposed, and the effect of it must therefore be difficult to foresee. Moreover, for a brief period a famine seemed to be imminent in Upper India, which must have disturbed the whole operation of his financial schemes. In his debilitated state of health this last source of anxiety seemed much to weigh upon him.

About the middle of July he went for a week to Barrackpore, near Calcutta. The change was, however, too slight, and, as might be expected, he returned to Calcutta without any material benefit. From that time the disease gradually augmented, and on the evening of the 2nd August he went to bed never to rise from it again. For many days he continued to be very ill, and his family experienced the usual alternations of hope and fear. He was quite aware of his critical state, and made all necessary arrangements with his habitual deliberation and calmness.

Lord Canning saw him on the 9th for the last time, and was much struck with the change which illness had made in him. He believed that he saw death in his face, and was deeply impressed with the vivid interest which, even in the last stage of weakness, he took in public affairs, with his keen desire for the success of his plans, and with the little merit which he was disposed to claim for his own share in them.

It was hoped that he would be strong enough to bear removal, and it was intended to delay the mail steamer for a few hours to take him to sea—the usual remedy at Calcutta for diseases of the climate. But when the time came there was no chance that his strength would be adequate to the effort. During the whole of the 11th he sank rapidly, and at half-past six in the evening he breathed his last.

The mourning in Calcutta was more universal than had ever been remembered. He had not been long in India, but while he had been there he filled a conspicuous and great part: he had done so much, that there were necessarily doubts in the minds of some as to the expediency of part of it. No such doubts, however, were thought of now. "That he should have come out to die here!"—"That he should have left a great English career *for this!*"—were the phrases in every one's mouth. The funeral was the largest ever known at Calcutta. It was attended by almost the entire population, from the Governor-General downwards, and not a single voice, on any ground whatever, dissented from the general grief.

Very little now remains to be said. A few scattered details, some of them perhaps trivial, must complete this sketch.

Mr Wilson's face was striking, though not handsome. His features were irregular, but had a peculiar look of mind and energy, while a strongly marked brow and very large eyebrows gave to all who saw him an unfailing impression of massive power and firm determination.

Mr Wilson's moral character in its general features resembled his intellectual. He was not a man of elaborate scruples and difficult doubts, and he did not much like those who were. His conscientiousness was of a plain but very practical kind; he had a single-minded rectitude which went straight to the pith of a moral difficulty—which showed him what he ought to do. On such subjects he was somewhat intolerant of speculative reasoning. "The common sense is so and so," he used to say, and he did not wish to be plagued with anything else.

In one respect his manner did not uniformly give a true impression of him. He always succeeded in conveying his meaning, in stating what he wished to have

done and why he wished it: he never failed to convince any one of his inexhaustible vigour and his substantial ability; but he sometimes did fail in giving a true expression to his latent generosity and real kindliness. He shrank almost nervously from the display of feeling, and sometimes was thought by casual observers to feel nothing, when in reality he was much more sensitive than they were. Another peculiarity which few persons would have attributed to him aided this mistake. It may seem strange in a practised Secretary of the Treasury, but he used to say that through life he had suffered far more from shyness than from anything else. Only very close observers could have discovered this, for his manner was habitually impressive and unfaltering. But common acquaintances, sometimes even persons who saw him on business, erroneously imputed to unthinking curtness that which was due in truth to nervous hesitation.

In the foregoing sketch Mr Wilson has of necessity been regarded almost exclusively as a public man, but his private life has many remarkable features, if it were proper to enlarge on them. His enjoyment of simple pleasures, of society, of scenery, of his home, was very vivid. No one who saw him in his unemployed moments would have believed that he was one of the busiest public men of his time. He never looked worn or jaded, and always contributed more than his share of geniality and vivacity to the scene around him. Like Sir Walter Scott, he loved a bright light; and the pleasantest society to him was that of the cheerful and the young.

The universal regret which has been expressed at Mr Wilson's death is the best tribute to his memory. It has been universally felt that on his special subjects and for his peculiar usefulness he was 'a finished man,' and in these respects he has left few such behind him. The qualities which he had the opportunity of displaying were those of an administrator and a financier. But some of those who knew him best believed that he only wanted an adequate opportunity to show that he had also many of the higher qualities of a statesman; and it was the feeling that he would perhaps have such an opportunity which reconciled them to his departure for India. As will have been evident from this narrative, he was placed in many changing circumstances, and in the gradual ascent of life was tried by many increasing difficulties. But at every step his mind grew with the occasion. *We* at least believe that he had a great sagacity and a great equanimity, which might have been fitly exercised on the very greatest affairs. But it was not so to be.

The intelligence of Mr Wilson's death was formally communicated by the Indian to the Home Government in the following despatch:—

To the Right Honourable Sir Charles Wood, Bart., G.C.B., Secretary of State for India.

Sir,—The painful task is imposed upon us of announcing to Her Majesty's Government the death of our colleague, the Right Honourable James Wilson.

2. This lamentable event took place on the evening of Saturday, the 11th, after an illness of a few days.

3. We enclose a copy of the notification by which we yesterday communicated the mournful intelligence to the public. The funeral took place at the time mentioned in the notification; and the great respect in which our lamented colleague was held was evinced by a very large attendance of the general community, in addition to that of the public officers, civil and military.

4. We are unable adequately to express our sense of the great loss which the public interests have sustained in Mr Wilson's death. We do not doubt, however, that this will be as fully appreciated by Her Majesty's Government as it is by ourselves, and as we have every reason to believe it will be by the community generally throughout India.

5. But we should not satisfy our feelings in communicating this sad occurrence to Her Majesty's Government, if we did not state our belief that the fatal disease which has removed Mr Wilson from among us was in a great degree the consequence of his laborious application to the duties of his high position, and of his conscientious determination not to cease from the prosecution of the important measures of which he had charge until their success was ensured. Actuated by a self-denying devotion to the objects for which he came out to this country, Mr Wilson continued to labour indefatigably long after the general state of his health had become such as to cause anxiety to the physician who attended him, and it was within a few days only after the Income Tax had become law, and when, at the earnest request of his medical adviser, he was preparing to remove from Calcutta for the remainder of the rainy season, that he was seized with the illness that has carried him off.

6. It is our sincere conviction that this eminent public servant sacrificed his life in the discharge of his duty.—We have, &c.,

Canning.

THE RECENT ARRANGEMENT BETWEEN THE BANKS OF ENGLAND AND FRANCE.

It has been known for several days that an arrangement of a peculiar nature has been made between the Banks of France and England, and some of its most important details have been made public, but much indistinctness still remains in the minds of many as to its exact nature and as to its probable consequences. *Four* questions naturally suggest themselves:—1st, What is the nature of the arrangement itself? 2ndly, Why did the Bank of France desire it? 3rdly, Why did the Bank of England agree to it? 4thly, What will be the results as far as we can venture to anticipate them?

The arrangement itself has been popularly but erroneously described as a loan. In reality it is an exchange. The Bank of England have agreed to take 2,000,000*l* of silver in exchange for two millions of gold at the usual rate* fixed by the French law for the interchange of the two metals. A loan would have affected the *Banking* Department of the Bank of England, but this operation will not do so. It is an operation solely of the Issue Department. By law, the Bank of England are enabled to hold one-fifth of the stock of bullion in the Issue Department in silver, and the exercise of the privilege, which has been disused for several years, is now to be resumed. The Bank of England has agreed with that of France to substitute so much silver for so much gold. The whole effect of the arrangement, when it is completed, upon the published accounts of the Bank of England, will be that the line marked "silver "bullion," which has so long been a blank in the account of the Issue Department, will contain 2,000,000*l*, and that the gold bullion in that account will be less by two millions sterling than it would otherwise have been. In the published accounts of the Bank of France, which do not distinguish gold from silver bullion, the arrangement will make no change whatever.

* At the French Mint 1 kilogramme weight is coined—

	£
In gold into	3,100
In silver into	200

1 part therefore of gold=15½ of silver.

The Bank of England has further agreed to return, if called on within a certain stipulated time, 2,000,000*l* of silver to the Bank of France, but in the meantime the former is to have as much control over the silver in its coffers as the latter has over the gold in its coffers. Each Bank is to have the whole and undisputed command of its entire treasure. The Issue Department of the Bank of England has bought so much silver to be delivered immediately, and has engaged to sell as much silver to be delivered hereafter; and this is the whole of the contract. There are no minor stipulations whatever. It has been stated that the Bank of France had given a pledge, more or less definite, that in consideration of this arrangement with the Bank of England it would not recur to those anomalous purchases of gold which have of late been disturbing the bullion market. But such is not the case. We have the best authority for saying that the Bank of England has not exacted any stipulations of that nature from the Bank of France; that it has not desired to fetter or to be responsible for the free action of the latter; and that in consequence the Bank of France may resume its former course as soon as it chooses to do so.

Why, then, do the Bank of France desire this arrangement? According to their own views, it was from no uneasiness as to their position. Notwithstanding the diminution in their reserve of bullion, they believe that they need feel no anxiety. By the last return their liabilities were:—

	£
Notes in circulation	30,296,520
Deposits, &c.	15,176,102
Total	45,472,622

and their reserve was more than 17,000,000*l*, and they consider that this is amply sufficient.

The difficulty of the Bank of France, it is said, is not the amount of bullion they hold, but the nature of that bullion. In their seventeen millions, the proportions are in round numbers:—

	£
Gold	4,000,000
Silver	13,000,000
Total	17,000,000

And under the French currency laws this is not satisfactory. The Bank of France for very sufficient reasons prefer discharging their liabilities in gold instead of in silver. If they were to pay a noteholder 1,000*l* in silver, he could immediately sell the silver in the market for gold and gain a substantial premium by the transaction. Accordingly the managers of the Bank of France apprehend that if they began to discharge their liabilities in silver, there would be a run upon them immediately for the sake of this premium. 'If every noteholder knew that he could obtain an appreciable 'percentage on his note by getting it changed, depend on it,' they say, 'he will get it changed. The same causes which 'have drained the rest of France of silver (except for the 'smallest purposes and of insufficient quantities even for those 'purposes) would begin to act upon us also; in a short time 'we should be drained of the whole of our thirteen millions 'of silver.' And this, they say, is the reason for their proposing this anomalous arrangement to the Directors of the Bank of England.

One remark must occur to every one when he hears this reasoning. It is the remark that no Bank ever ought to be in this position. There must be some fault somewhere; there must either be bad management or bad legislation;

there must be some peculiar error, or there could hardly be so peculiar a perplexity. For what is the allegation? The Bank of France say we have a large reserve, but it is not the kind of reserve we want. It is in the wrong metal; it is not gold but silver. The alternative is irresistible that either the Directors of the Bank have themselves made an error in hoarding a reserve in the wrong metal, or that circumstances beyond their power have forced upon them a hoard which they find they cannot use. They have a useless reserve they themselves tell us; either, therefore, they have voluntarily selected it—in which case they are to blame; or it has, by an unfortunate necessity, been forced upon them—in which case they are not to blame.

Nor is this the only remark which must immediately be made. There is another very obvious but very important one. This useless reserve is a misfortune, not to the Bank of France only, not to the French only, but to us also, to Europe, and to the whole monetary world. We have 13 millions sterling thus locked away in a great banking establishment, which does not dare to use any part of that sum for fear it may be deprived of all of it: And we have all been sufferers in consequence. The French demand for gold has been disturbing us for several weeks.

In truth, the entire difficulty is caused by the French currency laws. There has been a question whether there is a double standard of value in France, and we will not, therefore, use the phrase, but there is indisputably a *double paying medium*. Both gold and silver circulate in France; both are legal tenders to any amount; and there is a fixed relation between them. A certain quantity of silver by law will pay a debt of 1,000 francs, and a certain quantity of gold will pay it also. One effect of this twofold currency has been often pointed out. The metal which is relatively depreciated will come into exclusive use; every one will pay their debts in the least valuable metal, not in the most valuable; in the medium which they can obtain *most* easily, not in the medium which they obtain *less* easily. But we have now to remark a different effect. *Some* of the holders of the more valuable metal may be in a difficulty. If they are bound to pay either the less or the more valuable metal to their creditors, and they have not the former, they must use the latter. In consequence, in a country where two metals are a paying medium, those bankers who store up either metal for the necessary purposes of their business run a great risk. If it increases in value, there may be a run upon them, not because their credit is impaired, but because the metal they have chosen is desired.

It may be said that a banker so circumstanced has the remedy in his own hands. He can sell the more valuable metal himself. As his stock of bullion has risen to a premium, he can sell and obtain that premium. But in the present case, it is said, the Bank of France would not probably be permitted by law, and certainly would not be permitted by the Executive, to sell silver in the open market. By the operation of law and what is stronger than law, they can only hold silver for the purposes of paying their liabilities with it: they would not be permitted to become silver-sellers. An exceptional transaction with the Bank of England may be tolerated and has been licensed, because the silver is only gone to a place of deposit which is known, and transferred to a substantial firm which has contracted to replace it; but no ordinary sale of silver would be legal, or at any rate would be permitted.

The difficulty of the Bank of France is therefore intelligible, and the reason for it is clear. The Bank were encouraged by their monetary legislation to hold their reserve in a metal which has increased in value, and which would therefore be drained from them if they used it: they have been further restricted by law and authority from making use of the only adequate remedy, for they have been prevented from selling their stock of silver at its enhanced value in the markets of the world.

What, then, is the *motive of the Bank of England* in agreeing to this arrangement? She has no pecuniary object whatever, as we have the best reason to believe. Her managers wish to promote the convenience of the Bank of France, and to aid it in the artificial difficulties which we have described. They have taken, as they believe, means to secure themselves from loss: their duty to their proprietors required them to do so. But they hope for no profit; and as the transaction is to them only an exchange of one metal for another, with an engagement to re-exchange the two, it is evident that they ought not to expect any.

What then, lastly, will be the effect of this peculiar arrangement upon the general market both here and in France? We have left ourselves but little space to answer this question, and yet it is probably that in which our readers take the greatest interest. It is certain that the momentary effect here has been exceedingly good. The very rapid rise in the Bank rate was partly caused by an apprehension of what the Bank of France might do, and had partly in itself enhanced that apprehension in the minds of very many persons. Now it is fondly hoped that we know the worst. We have seen, it is thought, the real nature of the wants of France, and we have seen how to satisfy them.

We by no means wish to be prophets of evil. In so far as the confidence which now prevails is but the regular recovery from the undue apprehension of some days since, we are happy to believe that it is legitimate and right. We would not say a word which would disturb it. Nor would we say a word in criticism of the step which the Bank of England have taken, of which indeed all good judges of the money market speak most highly. But we feel it to be our duty to say a few words to prevent legitimate confidence from degenerating into sanguine miscalculation.

First, the step which the Bank of England have taken is one which by its nature cannot be repeated. The Bank can only hold one-fifth of its entire stock of bullion in silver. It now has in the Issue Department in round numbers 13,000,000*l*: one-fifth of that sum is 2,600,000*l*, and the legal limit is therefore not far off. The Bank of England, we must remember, must pay its notes in gold; silver with us is only a legal tender to the amount of forty shillings. Accordingly, the Bank runs a risk with every pound of silver it holds. It *may* have to sell it in the market *possibly* on disadvantageous terms. The Bank, therefore, must run no risk of being forced to make a sacrifice, and if they now were to take at all more than two millions of silver, they would certainly be running some risk.

Secondly, there are no less than five causes of the drain of bullion on the Bank of France, and, to some extent, upon us, none of which this transfer from one to the other has any tendency to diminish. These are,—a deficient harvest; a large foreign expenditure, both of our Government and of the French; large foreign monetary operations in France, both by way of loan and for the construction of railways; political disturbance, which a restless policy may any day augment; and, lastly, the general augmentation of the trade of the world, on which we last week remarked, and which is having a dispersive effect on the precious metals now, just as the diminution of trade had the opposite effect in 1858. While these causes are in operation, we cannot but look for a continuance of the drain.

Lastly, we hope—at least we try to hope—that the happy effects of this temporary arrangement may not prevent the Bank of France from conforming its rate of interest properly, and with the necessary caution, to the market rate. Experience shows that this is the sole remedy for a drain of bullion—the only way in which capital can be retained at home or can be attracted from abroad. If the momentary aid of the Bank of England be used for momentary purposes, to tide over passing difficulties, to allay political apprehensions, all will be well; but all will *not* be well if an agreeable palliative be mistaken for an effectual remedy, if the Bank of France or the Emperor—if it be true that the Emperor intervenes—permanently refuses to take the only course which theory warrants or experience confirms.

NEAPOLITAN DIFFICULTIES.

Probably few monarchs or statesmen ever had to deal with a problem of greater difficulty than that which Victor Emanuel and Count Cavour are now endeavouring to solve at Naples. Everything combines to make it onerous and delicate. They have to reconstruct a Government under circumstances of peril and embarrassment almost if not altogether without precedent. The country has been half conquered, and half embraced. The new King has been chosen by universal suffrage, and chosen with every appearance of unanimity; but the choice was suggested and rendered feasible by an invasion from the South, and was clenched by an

invasion from the North. The Crown was in reality won for Victor Emanuel, and presented to him, by one who was either an unavowed agent or an unauthorised adventurer;—and it was accepted while its previous wearer still clings to it and still remains within the territory. The new Administration has to bridge over a double gulf;—the gulf between slavery and freedom, and the gulf between an old hereditary dynasty and a new, elected, and *quasi*-foreign King. It has to do this in the face of opposition in front and reaction in the rear;—it has to do it with the means it finds at hand; and it has to do it without an hour's delay. Those who labour at such a task should be charitably interpreted and leniently judged. The difficulties in their way seem to us to have been very inadequately estimated, and the mistakes they have made to have been very needlessly exaggerated.

The first difficulty was in the formation of the new Administration. Energy had to be provided for, skill to be secured, and provincial jealousies to be, as far as possible, evaded or soothed down. Of course the first maxim in similar cases would suggest that Neapolitans should be appointed wherever they were available, and if suitable men could not be found in Naples, that those employed should be men of commanding position or universally admitted superiority of ability or fame. The natural man to have placed at the head of the new Government, if he had been fit for it, was of course Garibaldi. To his supremacy every one would have bowed. But unluckily it was obvious that Garibaldi had none of the qualifications of a statesman or an organiser—a fact which he himself would have been the first to avow and proclaim. There were no doubt Neapolitan nobles of wealth, high character, and respectable ability; but unfortunately, since the late Government had for years proscribed every man of eminent talent and liberal opinions, most of those who were known as patriots were also exiles; and those who remained were either wholly inexperienced in public affairs, or had gained their experience by serving a monarch, any connection with whom made their genuine liberality and attachment to the good cause a matter for suspicion. The appointment of Farini as Lieutenant-Governor was doubtless suggested by his experience in Romagna and the lesser Duchies; and there can be no question as to his ability, fidelity, and zeal. But, unfortunately, he was a stranger to Naples; his reputation, though high, was scarcely wide enough or preeminent enough to reconcile the Neapolitan nobles (who are proud and often wealthy, but not always wise or well-informed) to the rule of a Romagnese civilian; and he was not on the best of terms with the Liberator, as the events in Italy had shown. On the whole, therefore, it is probable that the appointment was an error—though a very natural one, and in no way a corrupt one. It is to be regretted, rather than blamed.

The composition of the Council of Ministers, too, has been severely criticised, but scarcely, we think, with sufficient reason. Some of the members, no doubt, labour under the objection of having been absent from Naples for the last twelve years,—but, as we have already observed, what active eminent Liberal has not of necessity been an exile? Some are men of no great social standing or territorial wealth; but, important as these qualifications are, practical ability is at such a crisis still more indispensable. The constitution of the Cabinet might, however, we admit, have been in some points more irreproachable; but it contains at least five names which every one is glad to see there. Poerio's sufferings and reputation give him an irrefragable title, though his abilities may not be of the very first order; but all Neapolitans have confidence in his character and views. Scialoja, too, the Minister of Finance, is a man of consummate ability; and so is the Minister of Justice. Some modifications may be desirable, and will probably be made; but on the whole the Administration is not one the nomination of which can fairly be treated as a blunder.

The treatment of Garibaldi's army is, however, the proceeding which has called forth the strongest censure; and assuredly, at first sight, the refusal of Victor Emanuel to adopt and embody the troops which had won him his new kingdom, and to recognise and confirm the officers in the several ranks conferred upon them by the Liberator, does look like unwisdom and ingratitude. But the case was one of great difficulty. A large proportion of the troops were neither regular soldiers nor picked men; their discipline was most imperfect, their pretensions were extravagantly high, and in their miscellaneous multitude were numbers whom no General who valued the character of his army would wish to retain. The judgment of Garibaldi in the choice of men, too, was notoriously not always as sagacious and reliable as his moral character and his military skill; and we can well understand that the nominations of his officers would need careful revision before they could be definitively sanctioned. What the King has done is to issue a proclamation thanking the Army of Liberation, declaring that they "have "deserved well of their country," and referring the question as to what proportion of them shall be retained and amalgamated with the regular forces, and what officers' commissions shall be confirmed, to a commission composed of *a majority of Garibaldians*. This appears to us at once the wisest and the fairest course that could be adopted; and had it been resolved on and announced in the first instance it is probable that little discontent would have arisen. But, unfortunately, while the matter was under discussion between Garibaldi and the King—the former insisting on the acceptance of his officers and soldiers in the mass, and the latter demurring to the claim—a considerable number of all ranks disbanded, or threw up their positions in disgust, and have wandered away, spreading ill-feeling in all directions.
